DUPONT CAPITAL EMERGING MARKETS DEBT FUND

Class I

DCDEX

OF FUNDVANTAGE TRUST

STATEMENT OF ADDITIONAL INFORMATION

September 1, 2018

This Statement of Additional Information (“SAI”) provides information about the DuPont Capital Emerging Markets Fund (the “Emerging Markets Fund”) and the DuPont Capital Emerging Markets Debt Fund (the “Emerging Markets Debt Fund” and, together with the Emerging Markets Fund, the “Funds”). The Funds are series of FundVantage Trust (the “Trust”).

This SAI is not a prospectus. It should be read in conjunction with the Funds’ current Prospectus dated September 1, 2018, as amended or supplemented from time to time (the “Prospectus”). This SAI is incorporated by reference in its entirety into the Prospectus. The Funds’ audited financial statements and the notes thereto, which are included in the Funds’ Annual Report to shareholders dated April 30, 2018, are incorporated into this SAI by reference. A copy of the Prospectus and annual reports to shareholders may be obtained without charge, upon request, by writing to the Funds at 4400 Computer Drive, Westborough, MA 01581-1722, by calling the Funds at (888) 447-0014 or on the Funds’ website at www.mutualfunds.dupontcapital.com.

GENERAL INFORMATION

The Trust was organized as a Delaware statutory trust on August 28, 2006. The Trust is a series trust authorized to issue separate series or classes of shares of beneficial interest. The Trust has established the Funds as separate series of the Trust. This SAI relates only to the Funds. The Funds issue Class I shares. The Emerging Markets Fund is a diversified, open-end management investment company registered under the Investment Company Act of 1940, as amended (the "1940 Act"). The Emerging Markets Debt Fund is a non-diversified, open-end management investment company registered under the 1940 Act. As a non-diversified fund, the Emerging Markets Debt Fund is not limited by the 1940 Act with regard to the portion of its assets that may be invested in the securities of a single issuer. The Emerging Markets Debt Fund, however, intends to maintain the required level of diversification and otherwise conduct its operations so as to qualify as a regulated investment company ("RIC") for purposes of the Internal Revenue Code of 1986, as amended (the "IRC"), to relieve the Emerging Markets Debt Fund of any liability for federal income tax to the extent that its earnings are distributed to shareholders. The IRC test applies at the end of each fiscal quarter and generally requires that at least 50% of the value of the Emerging Markets Debt Fund's total assets be represented by the types of assets that satisfy the asset diversification requirement imposed by the 1940 Act. In addition, no more than 25% of the value of the Emerging Markets Debt Fund's assets may be invested in the securities of any one issuer. Stocks of particular issuers, or issuers in particular industries, may dominate the investment portfolio of the Emerging Markets Debt Fund, which may adversely affect the performance of the Emerging Markets Debt Fund or subject it to greater price volatility than that experienced by more diversified investment companies. DuPont Capital Management Corporation (the "Adviser") serves as the investment adviser to the Funds.

INVESTMENT POLICIES

The following supplements the information contained in the Prospectus concerning the investment objectives and policies of the Funds.

BANK OBLIGATIONS. Bank obligations in which the Funds may invest include certificates of deposit, bankers' acceptances and fixed time deposits. Certificates of deposit are negotiable certificates issued against funds deposited in a commercial bank for a definite period of time and earning a specified return. Bankers' acceptances are negotiable drafts or bills of exchange, normally drawn by an importer or exporter to pay for specific merchandise, which are "accepted" by a bank, meaning, in effect, that the bank unconditionally agrees to pay the face value of the instrument on maturity. Fixed time deposits are bank obligations payable at a stated maturity date and bearing interest at a fixed rate. Fixed time deposits may be withdrawn on demand by the investor but may be subject to early withdrawal penalties which vary depending upon market conditions and the remaining maturity of the obligation. There are no contractual restrictions on the right to transfer a beneficial interest in a fixed time deposit to a third party, although there is no market for such deposits. A Fund will not invest in fixed time deposits which (1) are not subject to prepayment or (2) provide for withdrawal penalties upon prepayment (other than overnight deposits) if, in the aggregate, more than 15% of its net assets would be invested in such deposits, repurchase agreements maturing in more than seven days and other illiquid assets.

Obligations of foreign banks involve somewhat different investment risks than those affecting obligations of United States banks, including the possibilities that their liquidity could be impaired because of future political and economic developments, that their obligations may be less marketable than comparable obligations of United States banks, that a foreign jurisdiction might impose withholding taxes on interest income payable on those obligations, that foreign deposits may be seized or nationalized, that foreign governmental restrictions such as exchange controls may be adopted which might adversely affect the payment of principal and interest on those obligations and that the selection of those obligations may be more difficult because there may be less publicly available information concerning foreign banks or the accounting, auditing and financial reporting standards, practices and requirements applicable to foreign banks may differ from those applicable to United States banks. Foreign banks are not generally subject to examination by any U.S. Government agency or instrumentality.

- **BANKERS' ACCEPTANCES.** Bankers' acceptances are credit instruments evidencing the obligation of a bank to pay a draft that has been drawn on it by a customer. These instruments reflect the obligation of both the bank and the drawer to pay the face amount of the instrument upon maturity.
- **CERTIFICATES OF DEPOSIT.** Certificates of deposit are certificates evidencing the indebtedness of a commercial bank to repay funds deposited with it for a definite period of time (usually from 14 days to one year) at a stated or variable interest rate. Variable rate certificates of deposit provide that the interest rate will fluctuate on designated dates based on changes in a designated base rate (such as the composite rate for certificates of deposit established by the Federal Reserve Bank of New York).
- **TIME DEPOSITS.** Time deposits are bank deposits for fixed periods of time. Fixed time deposits may be withdrawn on demand by the investor, but may be subject to early withdrawal penalties which may vary depending upon market conditions and the remaining maturity of the obligation. There are no contractual restrictions on the right to transfer a beneficial interest in a fixed time deposit to a third party, although there is no market for such deposits.

BORROWING. Each Fund may borrow money to the extent permitted under the 1940 Act, and as interpreted, modified or otherwise permitted by regulatory authority having jurisdiction, from time to time. This means that, in general, a Fund may borrow money from banks for any purpose on a secured basis in an amount up to 33-1/3 of the Fund's total assets. A Fund may also borrow money for temporary administrative purposes on an unsecured basis in an amount not to exceed 5% of the Fund's total assets.

Specifically, provisions of the 1940 Act require a Fund to maintain continuous asset coverage (that is, total assets including borrowings, less liabilities exclusive of borrowings) of 300% of the amount borrowed, with an exception for borrowings not in excess of 5% of the Fund's total assets made for temporary administrative purposes. Any borrowings for temporary administrative purposes in excess of 5% of a Fund's total assets must maintain continuous asset coverage. If the 300% asset coverage should decline as a result of market fluctuations or other reasons, a Fund may be required to sell some of its portfolio holdings within three days to reduce the debt and restore the 300% asset coverage, even though it may be disadvantageous from an investment standpoint to sell securities at that time. As a non-fundamental policy, the Emerging Market Fund may not borrow for hedging or leverage purposes.

As noted below, a Fund also may enter into certain transactions, including reverse repurchase agreements mortgage dollar rolls and sale-buybacks, that can be viewed as constituting a form of borrowing or financing transaction by the Fund. To the extent a Fund covers its commitment under a reverse repurchase agreement (or economically similar transaction) by the segregation or "earmarking" of assets determined in accordance with procedures adopted by the Board of Trustees, equal in value to the amount of the Fund's commitment to repurchase, such an agreement will not be considered a "senior security" by the Fund and therefore will not be subject to the 300% asset coverage requirement otherwise applicable to borrowings by the Funds. Borrowing will tend to exaggerate the effect on net asset value ("NAV") of any increase or decrease in the market value of a Fund's portfolio. Money borrowed will be subject to interest costs which may or may not be recovered by appreciation of the securities purchased. A Fund also may be required to maintain minimum average balances in connection with such borrowing or to pay a commitment or other fee to maintain a line of credit; either of these requirements would increase the cost of borrowing over the stated interest rate.

A Fund may enter into reverse repurchase agreements, mortgage dollar rolls and economically similar transactions. A reverse repurchase agreement involves the sale of a portfolio-eligible security by a Fund, coupled with its agreement to repurchase the instrument at a specified time and price. Under a reverse repurchase agreement, a Fund continues to receive any principal and interest payments on the underlying security during the term of the agreement. A Fund typically will segregate or "earmark" assets determined to be liquid by the Adviser in accordance with procedures established by the Board of Trustees, equal (on a daily mark-to-market basis) to its obligations under reverse repurchase agreements. However, reverse repurchase agreements involve the risk that the market value of securities retained by a Fund may decline below the repurchase price of the securities sold by the Fund which it is obligated to repurchase. To the extent that positions in reverse repurchase agreements are not covered through the segregation or "earmarking" of liquid assets at least equal to the amount of any forward purchase commitment, such transactions would be subject to the Funds' limitations on borrowings, which would, among other things, restrict the aggregate of such transactions (plus any other borrowings) to 33-1/3% of the Fund's total assets.

A “mortgage dollar roll” is similar to a reverse repurchase agreement in certain respects. In a “dollar roll” transaction, a Fund sells a mortgage-related security, such as a security issued by the Government National Mortgage Association (“GNMA”), to a dealer and simultaneously agrees to repurchase a similar security (but not the same security) in the future at a predetermined price. A dollar roll can be viewed, like a reverse repurchase agreement, as a collateralized borrowing in which a Fund pledges a mortgage-related security to a dealer to obtain cash. Unlike in the case of reverse repurchase agreements, the dealer with which a Fund enters into a dollar roll transaction is not obligated to return the same securities as those originally sold by the Fund, but only securities which are “substantially identical.” To be considered substantially identical, the securities returned to a Fund generally must: (1) be collateralized by the same types of underlying mortgages; (2) be issued by the same agency and be part of the same program; (3) have a similar original stated maturity; (4) have identical net coupon rates; (5) have similar market yields (and therefore price); and (6) satisfy “good delivery” requirements, meaning that the aggregate principal amounts of the securities delivered and received back must be within 0.01% of the initial amount delivered.

A Fund’s obligation under a dollar roll agreement must be covered by segregated or “earmarked” liquid assets equal in value to the securities subject to repurchase by the Fund. As with reverse repurchase agreements, to the extent that positions in dollar roll agreements are not covered by segregated or “earmarked” liquid assets at least equal to the amount of any forward purchase commitment, such transactions would be subject to the Funds’ restrictions on borrowings. Furthermore, because dollar roll transactions may be for terms ranging between one and six months, dollar roll transactions may be deemed “illiquid” and subject to a Fund’s overall limitations on investments in illiquid securities.

A Fund also may effect simultaneous purchase and sale transactions that are known as “sale-buybacks.” A sale-buyback is similar to a reverse repurchase agreement, except that in a sale-buyback, the counterparty that purchases the security is entitled to receive any principal or interest payments made on the underlying security pending settlement of the Fund’s repurchase of the underlying security. A Fund’s obligations under a sale-buyback typically would be offset by liquid assets equal in value to the amount of the Fund’s forward commitment to repurchase the subject security.

COMMERCIAL PAPER. The Emerging Markets Debt Fund may invest in commercial paper. Commercial paper consists of short-term (up to 270 days) unsecured promissory notes issued by corporations and other entities in order to finance their current operations.

COMMON STOCK. Common stock represents an equity (ownership) interest in a company or other entity. This ownership interest often gives the Fund the right to vote on measures affecting the company’s organization and operations. Although common stocks generally have had a history of long-term growth in value, their prices are often volatile in the short-term and can be influenced by both general market risk and specific corporate risks. Accordingly, the Fund can lose money through its stock investments.

CONVERTIBLE SECURITIES. The Funds may invest in convertible securities, which may offer higher income than the common stocks into which they are convertible. A convertible security is a bond, debenture, note, preferred stock, or other security that entitles the holder to acquire common stock or other equity securities of the same or a different issuer. A convertible security generally entitles the holder to receive interest paid or accrued until the convertible security matures or is redeemed, converted or exchanged. Before conversion, convertible securities have characteristics similar to non-convertible debt or preferred securities, as applicable. Convertible securities are subordinate in rank to any senior debt obligations of the issuer, and, therefore, an issuer’s convertible securities entail more risk than its debt obligations. Convertible securities generally offer lower interest or dividend yields than non-convertible debt securities of similar credit quality because of the potential for capital appreciation. In addition, convertible securities are often lower-rated securities. Convertible securities rank senior to common stock in a corporation’s capital structure and, therefore, generally entail less risk than the corporation’s common stock, although the extent to which such risk is reduced depends in large measure upon the degree to which the convertible security sells above its value as a fixed income security.

Because of the conversion feature, the price of the convertible security will normally fluctuate in some proportion to changes in the price of the underlying asset, and as such is subject to risks relating to the activities of the issuer and/or general market and economic conditions. The income component of a convertible security may tend to cushion the security against declines in the price of the underlying asset. However, the income component of convertible securities causes fluctuations based upon changes in interest rates and the credit quality of the issuer.

If the convertible security's "conversion value," which is the market value of the underlying common stock that would be obtained upon the conversion of the convertible security, is substantially below the "investment value," which is the value of a convertible security viewed without regard to its conversion feature (i.e., strictly on the basis of its yield), the price of the convertible security is governed principally by its investment value. If the conversion value of a convertible security increases to a point that approximates or exceeds its investment value, the value of the security will be principally influenced by its conversion value. A convertible security will sell at a premium over its conversion value to the extent investors place value on the right to acquire the underlying common stock while holding an income-producing security.

A convertible security may be subject to redemption at the option of the issuer at a predetermined price. If a convertible security held by a Fund is called for redemption, the Fund would be required to permit the issuer to redeem the security and convert it to underlying common stock, or would sell the convertible security to a third party, which may have an adverse effect on the Fund's ability to achieve its investment objective. The Funds generally would invest in convertible securities for their favorable price characteristics and total return potential and would normally not exercise an option to convert unless the security is called or conversion is forced.

CORPORATE DEBT SECURITIES. A Fund's investments in U.S. dollar or foreign currency-denominated corporate debt securities of domestic or foreign issuers are limited to corporate debt securities (corporate bonds, debentures, notes and other similar corporate debt instruments, including convertible securities) which meet the minimum ratings criteria set forth for a Fund, or, if unrated, are in the Adviser's opinion comparable in quality to corporate debt securities in which a Fund may invest.

Corporate income producing securities may include forms of preferred or preference stock. The rate of interest on a corporate debt security may be fixed, floating or variable, and may vary inversely with respect to a reference rate. The rate of return or return of principal on some debt obligations may be linked or indexed to the level of exchange rates between the U.S. dollar and a foreign currency or currencies. Debt securities may be acquired with warrants attached.

Securities rated Baa and BBB are the lowest which are considered "investment grade" obligations. Moody's Investors Service, Inc. ("Moody's") describes securities rated Baa as "subject to moderate credit risk. They are considered medium-grade and as such may possess certain speculative characteristics." Standard & Poor's® Financial Services LLC ("S&P") describes securities rated BBB as "regarded as having adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation." For securities rated BBB, Fitch Ratings Ltd. ("Fitch") states that "...expectations of default risk are currently low...capacity for payment of financial commitments is considered adequate, but adverse business or economic conditions are more likely to impair this capacity." For a discussion of securities rated below-investment grade, see "Below-Investment Grade Securities" below.

CYBER SECURITY. Each Fund and its service providers are susceptible to operational and information security risks due to cyber security incidents. In general, cyber security incidents can result from deliberate attacks or unintentional events. Cyber security attacks include, but are not limited to, gaining unauthorized access to digital systems (e.g., through “hacking” or malicious software coding) for purposes of misappropriating assets or sensitive information, corrupting data or causing operational disruption. Cyber-attacks also may be carried out in a manner that does not require gaining unauthorized access, such as causing denial-of-service attacks on websites (i.e., efforts to make services unavailable to intended users). Cyber security incidents affecting the Adviser, Transfer Agent or Custodian or other service providers such as financial intermediaries have the ability to cause disruptions and impact business operations, potentially resulting in financial losses, including by interference with a Fund’s ability to calculate its NAV; impediments to trading for a Fund’s portfolio; the inability of fund shareholders to transact business with a Fund; violations of applicable privacy, data security or other laws; regulatory fines and penalties; reputational damage; reimbursement or other compensation or remediation costs; legal fees; or additional compliance costs. Similar adverse consequences could result from cyber security incidents affecting issuers of securities in which a Fund invests, counterparties with which a Fund engages in transactions, governmental and other regulatory authorities, exchange and other financial market operators, banks, brokers, dealers, insurance companies and other financial institutions and other parties. While information risk management systems and business continuity plans have been developed which are designed to reduce the risks associated with cyber security, there are inherent limitations in any cyber security risk management systems or business continuity plans, including the possibility that certain risks have not been identified.

DEBT SECURITIES. Debt securities represent money borrowed that obligates the issuer (e.g., a corporation, municipality, government, government agency) to repay the borrowed amount at maturity (when the obligation is due and payable) and usually to pay the holder interest at specific times.

DEPOSITARY RECEIPTS. American Depositary Receipts (“ADRs”) as well as other “hybrid” forms of ADRs, including European Depositary Receipts (“EDRs”) and Global Depositary Receipts (“GDRs”), are certificates evidencing ownership of shares of a foreign issuer. These certificates are issued by depository banks and generally trade on an established market in the United States or elsewhere. The underlying shares are held in trust by a custodian bank or similar financial institution. The depository bank may not have physical custody of the underlying securities at all times and may charge fees for various services, including forwarding dividends interest and shareholder information regarding corporate actions. ADRs may be available through “sponsored” or “unsponsored” facilities. A sponsored facility is established jointly by the issuer of the security underlying the receipt and a depository. An unsponsored facility may be established by a depository without participation by the issuer of the underlying security. Holders of unsponsored depository receipts generally bear all the costs of the unsponsored facility. The depository of an unsponsored facility frequently is under no obligation to distribute shareholder communications received from the issuer of the deposited security or to pass through, to the holders of the receipts, voting rights with respect to the deposited securities. ADRs are alternatives to directly purchasing the underlying foreign securities in their national markets and currencies. However, ADRs continue to be subject to many of the risks associated with investing directly in foreign securities. These risks include foreign exchange risk as well as the political and economic risks of the underlying issuer’s country.

DERIVATIVE INSTRUMENTS. In pursuing its investment objective, a Fund may, to the extent permitted by its investment objectives and policies, purchase and sell non deliverable forward contracts (NDF), exchange traded funds (“ETFs”), foreign currency and index futures contracts. The Funds also may purchase and sell foreign currency options for purposes of increasing exposure to a foreign currency or to shift exposure to foreign currency fluctuations from one country to another. If other types of financial instruments, including other types of options, or futures contracts are traded in the future, a Fund may also use those instruments, provided that such instruments are consistent with such Fund’s investment objective.

In pursuing its investment objective, the Emerging Markets Debt Fund may purchase and sell (write) both put options and call options on securities, swap agreements, securities indexes, commodity indexes and foreign currencies, and enter into interest rate, index and commodity futures contracts and purchase and sell options on such futures contracts (“futures options”), for hedging purposes, to seek to replicate the composition and performance of a particular index, or as part of its overall investment strategies. The Emerging Markets Debt Fund also may enter into swap agreements with respect to interest rates, commodities and indexes of securities or commodities. The Fund may invest in structured notes. If other types of financial instruments, including other types of options, futures contracts, or futures options are traded in the future, the Emerging Markets Debt Fund may also use those instruments, provided that such instruments are consistent with the Emerging Markets Debt Fund’s investment objective.

The value of some derivative instruments in which the Funds invest may be particularly sensitive to changes in prevailing interest rates, and, like the other investments of the Funds, the ability of a Fund to successfully utilize these instruments may depend in part upon the ability of the Adviser to forecast interest rates and other economic factors correctly. If the Adviser incorrectly forecasts such factors and has taken positions in derivative instruments contrary to prevailing market trends, the Funds could be exposed to the risk of loss.

The Funds might not employ any of the strategies described below, and no assurance can be given that any strategy used will succeed. If the Adviser incorrectly forecasts interest rates, market values or other economic factors in using a derivatives strategy for a Fund, such Fund might have been in a better position if it had not entered into the transaction at all. Also, suitable derivative transactions may not be available in all circumstances. The use of these strategies involves certain special risks, including a possible imperfect correlation, or even no correlation, between price movements of derivative instruments and price movements of related investments. While some strategies involving derivative instruments can reduce the risk of loss, they can also reduce the opportunity for gain or even result in losses by offsetting favorable price movements in related investments or otherwise, due to the possible inability of a Fund to purchase or sell a portfolio security at a time that otherwise would be favorable, or the possible need to sell a portfolio security at a disadvantageous time because the Fund is required to maintain asset coverage, or offsetting positions in connection with transactions in derivative instruments or the possible inability of a Fund to close out or to liquidate its derivatives positions. In addition, a Fund's use of such instruments may cause such Fund to realize higher amounts of short-term capital gains (generally taxed at ordinary income tax rates) than if it had not used such instruments. For Funds that gain exposure to an asset class using derivative instruments backed by a collateral portfolio of fixed income instruments, changes in the value of the fixed income instruments may result in greater or lesser exposure to that asset class than would have resulted from a direct investment in securities comprising that asset class.

Options on Securities and Indexes. A Fund may, to the extent specified herein or in the Prospectus, purchase and sell both put and call options on fixed income or other securities or indexes in standardized contracts traded on foreign or domestic securities exchanges, boards of trade, or similar entities, or quoted on the National Association of Securities Dealers Automatic Quotation System ("NASDAQ") or on an over-the-counter market, and agreements, sometimes called cash puts, which may accompany the purchase of a new issue of bonds from a dealer.

An option on a security (or index) is a contract that gives the holder of the option, in return for a premium, the right to buy from (in the case of a call) or sell to (in the case of a put) the writer of the option the security underlying the option (or the cash value of the index) at a specified exercise price at any time during the term of the option. The writer of an option on a security has the obligation upon exercise of the option to deliver the underlying security upon payment of the exercise price or to pay the exercise price upon delivery of the underlying security. Upon exercise, the writer of an option on an index is obligated to pay the difference between the cash value of the index and the exercise price multiplied by the specified multiplier for the index option. (An index is designed to reflect features of a particular financial or securities market, a specific group of financial instruments or securities or certain economic indicators.)

A Fund will write call options and put options only if they are "covered." In the case of a call option on a security, the option is "covered" if the Fund owns the security underlying the call or has an absolute and immediate right to acquire that security without additional cash consideration (or, if additional cash consideration is required, cash or other assets determined to be liquid by the Adviser in accordance with procedures established by the Board of Trustees, in such amount are segregated or "earmarked") upon conversion or exchange of other securities held by a Fund. For a call option on an index, the option is covered if a Fund maintains with its custodian assets determined to be liquid by the Adviser in accordance with procedures established by the Board of Trustees, in an amount equal to the contract value of the index. A call option is also covered if the Fund holds a call on the same security or index as the call written where the exercise price of the call held is (i) equal to or less than the exercise price of the call written, or (ii) greater than the exercise price of the call written, provided the difference is maintained by such Fund in segregated or "earmarked" assets determined to be liquid by the Adviser in accordance with procedures established by the Board of Trustees. A put option on a security or an index is "covered" if the Fund segregates or "earmarks" assets determined to be liquid by the Adviser in accordance with procedures established by the Board of Trustees equal to the exercise price. A put option is also covered if the Fund holds a put on the same security or index as the put written where the exercise price of the put held is (i) equal to or greater than the exercise price of the put written, or (ii) less than the exercise price of the put written, provided the difference is maintained by such Fund in segregated or "earmarked" assets determined to be liquid by the Adviser in accordance with procedures established by the Board of Trustees.

If an option written by a Fund expires unexercised, the Fund realizes a capital gain equal to the premium received at the time the option was written. If an option purchased by a Fund expires unexercised, such Fund realizes a capital loss equal to the premium paid. Prior to the earlier of exercise or expiration, an exchange traded option may be closed out by an offsetting purchase or sale of an option of the same series (type, exchange, underlying security or index, exercise price and expiration). There can be no assurance, however, that a closing purchase or sale transaction can be effected when a Fund desires.

A Fund may sell put or call options it has previously purchased, which could result in a net gain or loss depending on whether the amount realized on the sale is more or less than the premium and other transaction costs paid on the put or call option which is sold. Prior to exercise or expiration, an option may be closed out by an offsetting purchase or sale of an option of the same series. A Fund will realize a capital gain from a closing purchase transaction if the cost of the closing option is less than the premium received from writing the option, or, if it is more, such Fund will realize a capital loss. If the premium received from a closing sale transaction is more than the premium paid to purchase the option, the Fund will realize a capital gain or, if it is less, the Fund will realize a capital loss. The principal factors affecting the market value of a put or a call option include supply and demand, interest rates, the current market price of the underlying security or index in relation to the exercise price of the option, the volatility of the underlying security or index, and the time remaining until the expiration date.

The premium paid for a put or call option purchased by a Fund is an asset of the Fund. The premium received for an option written by a Fund is recorded as a deferred credit. The value of an option purchased or written is marked-to-market daily and is valued at the closing price on the exchange on which it is traded or, if not traded on an exchange or no closing price is available, at the mean between the last bid and asked prices.

The Funds may write covered straddles consisting of a combination of a call and a put written on the same underlying security. A straddle will be covered when sufficient assets are deposited to meet the Funds' immediate obligations. The Funds may use the same liquid assets to cover both the call and put options where the exercise price of the call and put are the same or the exercise price of the call is higher than that of the put. In such cases, the Funds will also segregate or " earmark " liquid assets equivalent to the amount, if any, by which the put is " in the money ."

Risks Associated with Options on Securities and Indexes. There are several risks associated with transactions in options on securities and on indexes. For example, there are significant differences between the securities and options markets that could result in an imperfect correlation between these markets, causing a given transaction not to achieve its objectives. A decision as to whether, when and how to use options involves the exercise of skill and judgment, and even a well-conceived transaction may be unsuccessful to some degree because of market behavior or unexpected events.

The writer of an option has no control over the time when it may be required to fulfill its obligation as a writer of the option. Once an option writer has received an exercise notice, it cannot effect a closing purchase transaction in order to terminate its obligation under the option and must deliver the underlying security at the exercise price. If a put or call option purchased by a Fund is not sold when it has remaining value, and if the market price of the underlying security remains equal to or greater than the exercise price (in the case of a put), or remains less than or equal to the exercise price (in the case of a call), such Fund will lose its entire investment in the option. also, where a put or call option on a particular security is purchased to hedge against price movements in a related security, the price of the put or call option may move more or less than the price of the related security.

There can be no assurance that a liquid market will exist when a Fund seeks to close out an option position. If a Fund were unable to close out an option that it had purchased on a security, it would have to exercise the option in order to realize any profit or the option may expire worthless. If a Fund were unable to close out a covered call option that it had written on a security, it would not be able to sell the underlying security unless the option expired without exercise. As the writer of a covered call option, the Fund forgoes, during the option's life, the opportunity to profit from increases in the market value of the security covering the call option above the sum of the premium and the exercise price of the call.

If trading were suspended in an option purchased by a Fund, such Fund would not be able to close out the option. If restrictions on exercise were imposed, a Fund might be unable to exercise an option it has purchased. Except to the extent that a call option on an index written by a Fund is covered by an option on the same index purchased by the Fund, movements in the index may result in a loss to the Fund; however, such losses may be mitigated by changes in the value of the Fund's securities during the period the option was outstanding.

To the extent that a Fund writes a call option on a security it holds in its portfolio and intends to use such security as the sole means of “covering” its obligation under the call option, the Fund has, in return for the premium on the option, given up the opportunity to profit from a price increase in the underlying security above the exercise price during the option period, but, as long as its obligation under such call option continues, has retained the risk of loss should the price of the underlying security decline. If a Fund were unable to close out such a call option, the Fund would not be able to sell the underlying security unless the option expired without exercise.

Foreign Currency Options. Funds that invest in foreign currency-denominated securities may buy or sell put and call options on foreign currencies. These Funds may buy or sell put and call options on foreign currencies either on exchanges or in the over-the-counter market. A put option on a foreign currency gives the purchaser of the option the right to sell a foreign currency at the exercise price until the option expires. A call option on a foreign currency gives the purchaser of the option the right to purchase the currency at the exercise price until the option expires. Currency options traded on U.S. or other exchanges may be subject to position limits which may limit the ability of the Fund to reduce foreign currency risk using such options. Over-the-counter options differ from traded options in that over-the-counter options are two-party contracts with price and other terms negotiated between buyer and seller and generally do not have as much market liquidity as exchange traded options.

Futures Contracts and Options on Futures Contracts. A futures contract is an agreement between two parties to buy and sell a security or commodity for a set price on a future date. These contracts are traded on exchanges, so that, in most cases, either party can close out its position on the exchange for cash, without delivering the security or commodity. An option on a futures contract gives the holder of the option the right to buy or sell a position in a futures contract from or to the writer of the option, at a specified price and on or before a specified expiration date.

Each Fund may invest in futures contracts and options thereon (“futures options”) with respect to, but not limited to, interest rates, commodities and security or commodity indexes. To the extent that a Fund may invest in foreign currency denominated securities, it may also invest in foreign currency futures contracts and options thereon.

An interest rate commodity, foreign currency or index futures contract provides for the future sale by one party and purchase by another party of a specified quantity of a financial instrument commodity, foreign currency, or the cash value of an index at a specified price and time. A futures contract on an index is an agreement pursuant to which two parties agree to take or make delivery of an amount of cash equal to the difference between the value of the index at the close of the last trading day of the contract and the price at which the index contract was originally written. Although the value of an index might be a function of the value of certain specified securities, no physical delivery of these securities is made. A public market exists in futures contracts covering a number of indexes as well as financial instruments and foreign currencies and it is expected that other futures contracts will be developed and traded in the future. A Fund may also invest in commodity futures contracts and options thereon. A commodity futures contract is an agreement between two parties, in which one party agrees to buy a commodity, such as an energy, agricultural or metal commodity from the other party at a later date at a price and quantity agreed-upon when the contract is made.

A Fund may purchase and write call and put futures options. Futures options possess many of the same characteristics as options on securities and indexes (discussed above). A futures option gives the holder the right, in return for the premium paid, to assume a long position (call) or short position (put) in a futures contract at a specified exercise price at any time during the period of the option. Upon exercise of a call option, the holder acquires a long position in the futures contract and the writer is assigned the opposite short position. In the case of a put option, the opposite is true. A call option is “in the money” if the value of the futures contract that is the subject of the option exceeds the exercise price. A put option is “in the money” if the exercise price exceeds the value of the futures contract that is the subject of the option.

Pursuant to a claim for exclusion from the definition of “commodity pool operator” filed by the Trust with the National Futures Association (“NFA”), the Trust does not fall within the definition of “commodity pool operator” under the U.S. Commodity Exchange Act, as amended (“CEA”), in respect of the Funds, and thus, is not subject to registration or regulation as such under the CEA in respect of the Funds.

Limitations on Use of Futures and Futures Options. A Fund will only enter into futures contracts and futures options which are standardized and traded on a U.S. or foreign exchange, board of trade, or similar entity or quoted on an automated quotation system.

Additionally, a Fund will limit its trading in “commodity interests,” as that term is defined under applicable CFTC Rules, and which generally includes commodity futures, futures options and swaps, such that, aside from commodity futures, commodity options contracts or swaps that, in each case, are used solely for bona fide hedging purposes within the meaning and intent of applicable CFTC Rules, (i) the aggregate initial margin and premiums required to establish positions in commodity interests will not exceed five percent of the liquidation value of the Fund’s portfolio after taking into account unrealized profits and unrealized losses on any such contracts it has entered into, or (ii) the aggregate net notional value of commodity interest positions does not exceed 100 percent of the liquidation value of the Fund’s portfolio after taking into account unrealized profits and unrealized losses on any such contracts it has entered into, in each case, as further described in CFTC Rule 4.5 (c)(2).

When a purchase or sale of a futures contract is made by a Fund, the Fund is required to deposit with its custodian (or broker, if legally permitted) a specified amount of assets determined to be liquid by the Adviser in accordance with procedures established by the Board of Trustees (“initial margin”). The margin required for a futures contract is set by the exchange on which the contract is traded and may be modified during the term of the contract. Margin requirements on foreign exchanges may be different than U.S. exchanges. The initial margin is in the nature of a performance bond or good faith deposit on the futures contract which is returned to the Fund upon termination of the contract, assuming all contractual obligations have been satisfied. Each Fund expects to earn interest income on its initial margin deposits. A futures contract held by a Fund is valued daily at the official settlement price of the exchange on which it is traded. Each day a Fund pays or receives cash, called “variation margin,” equal to the daily change in value of the futures contract. This process is known as “marking to market.” Variation margin does not represent a borrowing or loan by a Fund but is instead a settlement between such Fund and the broker of the amount one would owe the other if the futures contract expired. In computing daily NAV, each Fund will mark to market its open futures positions.

A Fund is also required to deposit and maintain margin with respect to put and call options on futures contracts written by it. Such margin deposits will vary depending on the nature of the underlying futures contract (and the related initial margin requirements), the current market value of the option and other futures positions held by the Fund.

Although some futures contracts call for making or taking delivery of the underlying securities or commodities, generally these obligations are closed out prior to delivery by offsetting purchases or sales of matching futures contracts (same exchange, underlying security or index and delivery month). Closing out a futures contract sale is effected by purchasing a futures contract for the same aggregate amount of the specific type of financial instrument or commodity with the same delivery date. If an offsetting purchase price is less than the original sale price, a Fund realizes a capital gain, or if it is more, a Fund realizes a capital loss. Conversely, if an offsetting sale price is more than the original purchase price, a Fund realizes a capital gain, or if it is less, a Fund realizes a capital loss. The transaction costs must also be included in these calculations.

The Funds may write covered straddles consisting of a call and a put written on the same underlying futures contract. A straddle will be covered when sufficient assets are deposited to meet a Fund’s immediate obligations. A Fund may use the same liquid assets to cover both the call and put options where the exercise price of the call and put are the same, or the exercise price of the call is higher than that of the put. In such cases, the Funds will also segregate or “ earmark” liquid assets equivalent to the amount, if any, by which the put is “in the money.”

When purchasing a futures contract, a Fund will maintain with its custodian (and mark-to-market on a daily basis) assets determined to be liquid by the Adviser in accordance with procedures established by the Board of Trustees, that, when added to the amounts deposited with a futures commission merchant as margin, are equal to the market value of the futures contract. Alternatively, a Fund may “cover” its position by purchasing a put option on the same futures contract with a strike price as high as or higher than the price of the contract held by such Fund.

When selling a futures contract, a Fund will maintain with its custodian (and mark-to-market on a daily basis) assets determined to be liquid by the Adviser in accordance with procedures established by the Board of Trustees that are equal to the market value of the futures contract. Alternatively, a Fund may “cover” its position by owning the instruments underlying the futures contract (or, in the case of an index futures contract, a portfolio with a volatility substantially similar to that of the index on which the futures contract is based), or by holding a call option permitting such Fund to purchase the same futures contract at a price no higher than the price of the contract written by such Fund (or at a higher price if the difference is maintained in liquid assets with the Trust’s custodian).

With respect to futures contracts that are not legally required to “cash settle,” a Fund may cover the open position by setting aside or “earmarking” liquid assets in an amount equal to the market value of the futures contract. With respect to futures that are required to “cash settle,” however, a Fund is permitted to set aside or “earmark” liquid assets in an amount equal to a Fund’s daily marked to market (net) obligation, if any, (in other words, the Fund’s daily net liability, if any) rather than the market value of the futures contract. By setting aside assets equal to only its net obligation under cash-settled futures, a Fund will have the ability to employ leverage to a greater extent than if such Fund were required to segregate assets equal to the full market value of the futures contract.

When selling a call option on a futures contract, a Fund will maintain with its custodian (and mark-to-market on a daily basis) assets determined to be liquid by the Adviser in accordance with procedures established by the Board of Trustees, that, when added to the amounts deposited with a futures commission merchant as margin, equal the total market value of the futures contract underlying the call option. Alternatively, a Fund may cover its position by entering into a long position in the same futures contract at a price no higher than the strike price of the call option, by owning the instruments underlying the futures contract, or by holding a separate call option permitting such Fund to purchase the same futures contract at a price not higher than the strike price of the call option sold by such Fund.

When selling a put option on a futures contract, a Fund will maintain with its custodian (and mark-to-market on a daily basis) assets determined to be liquid by the Adviser in accordance with procedures established by the Board of Trustees, that equal the purchase price of the futures contract, less any margin on deposit. Alternatively, a Fund may cover the position either by entering into a short position in the same futures contract, or by owning a separate put option permitting it to sell the same futures contract so long as the strike price of the purchased put option is the same or higher than the strike price of the put option sold by such Fund.

To the extent that securities with maturities greater than one year are used to segregate or “earmark” assets to cover a Fund’s obligations under futures contracts and related options, such use will not eliminate the risk of a form of leverage, which may tend to exaggerate the effect on NAV of any increase or decrease in the market value of a Fund’s portfolio and may require liquidation of portfolio positions when it is not advantageous to do so. However, any potential risk of leverage resulting from the use of securities with maturities greater than one year may be mitigated by the overall duration limit on a Fund’s portfolio securities. Thus, the use of a longer-term security may require a Fund to hold offsetting short-term securities to balance such Fund’s portfolio such that the Fund’s duration does not exceed the maximum permitted for such Fund in the Prospectus.

The requirements for qualification as a regulated investment company (“RIC”) provided under the IRC also may limit the extent to which the Funds may enter into futures, futures options or forward contracts. See “Certain Material U.S. Federal Income Tax Considerations.”

Risks Associated with Futures and Futures Options. There are several risks associated with the use of futures contracts and futures options. A purchase or sale of a futures contract may result in losses in excess of the margin deposits relating to the futures contract. There can be no guarantee that there will be a correlation between price movements in the hedging vehicle and in the Fund securities being hedged. In addition, there are significant differences between the securities and futures markets that could result in an imperfect correlation between the markets, causing a given hedge not to achieve its objectives. The degree of imperfection of correlation depends on circumstances such as variations in speculative market demand for futures and futures options on securities, including technical influences in futures trading and futures options, and differences between the financial instruments being hedged and the instruments underlying the standard contracts available for trading in such respects as interest rate levels, maturities and creditworthiness of issuers. A decision as to whether, when and how to hedge involves the exercise of skill and judgment, and even a well-conceived hedge may be unsuccessful to some degree because of market behavior or unexpected interest rate trends.

Futures contracts on U.S. Government securities historically have reacted to an increase or decrease in interest rates in a manner similar to that in which the underlying U.S. Government securities reacted. To the extent, however, that a Fund enters into such futures contracts, the value of such futures will not vary in direct proportion to the value of such Fund's holdings. Thus, the anticipated spread between the price of the futures contract and the hedged security may be distorted due to differences in the nature of the markets. The spread also may be distorted by differences in initial and variation margin requirements, the liquidity of such markets and the participation of speculators in such markets.

Futures exchanges may limit the amount of fluctuation permitted in certain futures contract prices during a single trading day. The daily limit establishes the maximum amount that the price of a futures contract may vary either up or down from the previous day's settlement price at the end of the current trading session. Once the daily limit has been reached in a futures contract subject to the limit, no more trades may be made on that day at a price beyond that limit. The daily limit governs only price movements during a particular trading day and therefore does not limit potential losses because the limit may work to prevent the liquidation of unfavorable positions. For example, futures prices have occasionally moved to the daily limit for several consecutive trading days with little or no trading, thereby preventing prompt liquidation of positions and subjecting some holders of futures contracts to substantial losses.

There can be no assurance that a liquid market will exist at a time when a Fund seeks to close out a futures or a futures option position, and that Fund would remain obligated to meet margin requirements until the position is closed. In addition, many of the contracts discussed above are relatively new instruments without a significant trading history. As a result, there can be no assurance that an active secondary market will develop or continue to exist.

Risks Associated with Commodity Futures Contracts. There are several additional risks associated with transactions in commodity futures contracts.

Storage. Unlike the financial futures markets, in the commodity futures markets there are costs of physical storage associated with purchasing the underlying commodity. The price of the commodity futures contract will reflect the storage costs of purchasing the physical commodity, including the time value of money invested in the physical commodity. To the extent that the storage costs for an underlying commodity change while the Fund is invested in futures contracts on that commodity, the value of the futures contract may change proportionately.

Reinvestment. In the commodity futures markets, producers of the underlying commodity may decide to hedge the price risk of selling the commodity by selling futures contracts today to lock in the price of the commodity at delivery tomorrow. In order to induce speculators to purchase the other side of the same futures contract, the commodity producer generally must sell the futures contract at a lower price than the expected future spot price. Conversely, if most hedgers in the futures market are purchasing futures contracts to hedge against a rise in prices, then speculators will only sell the other side of the futures contract at a higher futures price than the expected future spot price of the commodity. The changing nature of the hedgers and speculators in the commodity markets will influence whether futures prices are above or below the expected future spot price, which can have significant implications for the Fund. If the nature of hedgers and speculators in futures markets has shifted when it is time for the Fund to reinvest the proceeds of a maturing contract in a new futures contract, the Fund might reinvest at higher or lower futures prices, or choose to pursue other investments.

Certain restrictions imposed on the Fund by the IRC may limit the Fund's ability to invest in commodity futures contracts.

Tax Risk. The Fund intends to qualify annually to be treated as a RIC under the IRC. To qualify as a RIC under the IRC, the Fund must invest in assets which produce the types of income specified in the IRC and the Treasury Reporting Obligations ("Qualifying Income"). Whether the income from certain derivatives, swaps, commodity-linked derivatives and other commodity/natural resource-related securities is Qualifying Income must be determined on a case-by-case basis, and the Fund will endeavor to ensure that income that is not Qualifying Income will be limited to 10% or less of the Fund's income. Accordingly, the Fund's ability to invest in certain derivatives, swaps, commodity-linked derivatives and other commodity/natural resource-related securities may be restricted. Further, if the Fund does invest in these types of securities and the income is determined not to be Qualifying Income, it may cause the Fund to fail to qualify as a RIC under the IRC. See "Certain Material U.S. Federal Income Tax Considerations" below for additional information related to these restrictions.

Other Economic Factors. The commodities which underlie commodity futures contracts may be subject to additional economic and non-economic variables, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, political and regulatory developments. These factors may have a larger impact on commodity prices and commodity-linked instruments, including futures contracts, than on traditional securities. Certain commodities are also subject to limited pricing flexibility because of supply and demand factors. Others are subject to broad price fluctuations as a result of the volatility of the prices for certain raw materials and the instability of supplies of other materials. These additional variables may create additional investment risks which subject the Fund's investments to greater volatility than investments in traditional securities.

Additional Risks of Options on Securities, Futures Contracts, Options on Futures Contracts and Forward Currency Exchange Contracts and Options Thereon. Options on securities, futures contracts, and options on currencies may be traded on foreign exchanges. Such transactions may not be regulated as effectively as similar transactions in the United States; may not involve a clearing mechanism and related guarantees, and are subject to the risk of governmental actions affecting trading in, or the prices of, foreign securities. The value of such positions also could be adversely affected by (i) other complex foreign political, legal and economic factors, (ii) lesser availability than in the United States of data on which to make trading decisions, (iii) delays in the Trust's ability to act upon economic events occurring in foreign markets during non-business hours in the United States, (iv) the imposition of different exercise and settlement terms and procedures and margin requirements than in the United States, and (v) lesser trading volume.

Swap Agreements and Options on Swap Agreements. A Fund may engage in swap transactions, including, but not limited to, swap agreements on interest rates, security or commodity indexes, specific securities and commodities, and credit and event-linked swaps. To the extent a Fund may invest in foreign currency-denominated securities, it also may invest in currency exchange rate swap agreements. A Fund also may enter into options on swap agreements ("swap options").

A Fund may enter into swap transactions for any legal purpose consistent with its investment objectives and policies, such as attempting to obtain or preserve a particular return or spread at a lower cost than obtaining a return or spread through purchases and/or sales of instruments in other markets, to protect against currency fluctuations, as a duration management technique, to protect against any increase in the price of securities the Fund anticipates purchasing at a later date, or to gain exposure to certain markets in a more cost efficient manner.

OTC swap agreements are bilateral contracts entered into primarily by institutional investors for periods ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments. The gross returns to be exchanged or "swapped" between the parties are generally calculated with respect to a "notional amount," i.e., the return on or change in value of a particular dollar amount invested at a particular interest rate, in a particular foreign currency, or in a "basket" of securities or commodities representing a particular index. A "quanto" or "differential" swap combines both an interest rate and a currency transaction. Other forms of swap agreements include interest rate caps, under which, in return for a premium, one party agrees to make payments to the other to the extent that interest rates exceed a specified rate, or "cap"; interest rate floors, under which, in return for a premium, one party agrees to make payments to the other to the extent that interest rates fall below a specified rate, or "floor"; and interest rate collars, under which a party sells a cap and purchases a floor or vice versa in an attempt to protect itself against interest rate movements exceeding given minimum or maximum levels. Consistent with a Fund's investment objectives and general investment policies, a Fund may invest in commodity swap agreements. For example, an investment in a commodity swap agreement may involve the exchange of floating-rate interest payments for the total return on a commodity index. In a total return commodity swap, the Fund will receive the price appreciation of a commodity index, a portion of the index, or a single commodity in exchange for paying an agreed-upon fee. If the commodity swap is for one period, a Fund may pay a fixed fee, established at the outset of the swap. However, if the term of the commodity swap is more than one period, with interim swap payments, a Fund may pay an adjustable or floating fee. With a "floating" rate, the fee may be pegged to a base rate, such as the London Interbank Offered Rate ("LIBOR"), and is adjusted each period. Therefore, if interest rates increase over the term of the swap contract, a Fund may be required to pay a higher fee at each swap reset date.

A Fund also may enter into swap options. A swap option is a contract that gives a counterparty the right (but not the obligation) in return for payment of a premium, to enter into a new swap agreement or to shorten, extend, cancel or otherwise modify an existing swap agreement, at some designated future time on specified terms. A Fund may write (sell) and purchase put and call swap options.

Depending on the terms of the particular option agreement, a Fund will generally incur a greater degree of risk when it writes a swap option than it will incur when it purchases a swap option. When a Fund purchases a swap option, it risks losing only the amount of the premium it has paid should it decide to let the option expire unexercised.

However, when a Fund writes a swap option, upon exercise of the option the Fund will become obligated according to the terms of the underlying agreement.

Most types of swap agreements entered into by a Fund will calculate the obligations of the parties to the agreement on a “net basis.” Consequently, a Fund’s current obligations (or rights) under a swap agreement will generally be equal only to the net amount to be paid or received under the agreement based on the relative values of the positions held by each party to the agreement (the “net amount”). A Fund’s current obligations under a swap agreement will be accrued daily (offset against any amounts owed to the Fund) and any accrued but unpaid net amounts owed to a swap counterparty will be covered by the segregation or “earmarking” of assets determined to be liquid by the Adviser in accordance with procedures established by the Board of Trustees, to avoid any potential leveraging of the Fund’s portfolio. Obligations under swap agreements so covered will not be construed to be “senior securities” for purposes of a Fund’s investment restriction concerning senior securities.

A Fund also may enter into credit default swap agreements. The credit default swap agreement may reference one or more debt securities or obligations that are not currently held by the Fund. The protection “buyer” in a credit default contract is generally obligated to pay the protection “seller” an upfront or a periodic stream of payments over the term of the contract until a credit event, such as a default, on a reference obligation has occurred. If a credit event occurs, the seller generally must pay the buyer the “par value” (full notional value) of the swap in exchange for an equal face amount of deliverable obligations of the reference entity described in the swap, or the seller may be required to deliver the related net cash amount if the swap is cash settled. A Fund may be either the buyer or seller in the transaction. If a Fund is a buyer and no credit event occurs, the Fund may recover nothing if the swap is held through its termination date. However, if a credit event occurs, the buyer may receive the full notional value of the swap in exchange for an equal face amount of deliverable obligations of the reference entity whose value may have significantly decreased. As a seller, a Fund generally receives an upfront payment or a fixed rate of income throughout the term of the swap provided that there is no credit event. As the seller, a Fund would effectively add leverage to its portfolio because, in addition to its total net assets, a Fund would be subject to investment exposure on the notional amount of the swap.

The spread of a credit default swap is the annual amount the protection buyer must pay the protection seller over the length of the contract, expressed as a percentage of the notional amount. When spreads rise, market perceived credit risk rises and when spreads fall, market perceived credit risk falls. Wider credit spreads and decreasing market values, when compared to the notional amount of the swap, represent a deterioration of the credit soundness of the issuer of the reference obligation and a greater likelihood or risk of default or other credit event occurring as defined under the terms of the agreement. For credit default swap agreements on asset-backed securities and credit indices, the quoted market prices and resulting values, as well as the annual payment rate, serve as an indication of the current status of the payment/performance risk.

Credit default swap agreements sold by a Fund may involve greater risks than if the Fund had invested in the reference obligation directly since, in addition to general market risks, credit default swaps are subject to illiquidity risk, and with respect to OTC credit default swaps, counterparty risk and credit risk. A Fund will enter into uncleared credit default swap agreements only with counterparties that meet certain standards of creditworthiness. A buyer generally also will lose its investment and recover nothing should no credit event occur and the swap is held to its termination date. If a credit event were to occur, the value of any deliverable obligation received by the seller, coupled with the upfront or periodic payments previously received, may be less than the full notional value it pays to the buyer, resulting in a loss of value to the seller. A Fund's obligations under a credit default swap agreement will be accrued daily (offset against any amounts owing to the Fund). In connection with credit default swaps in which a Fund is the buyer or the seller, if a Fund covers its position through asset segregation, the Fund will segregate or " earmark " cash or liquid assets with a value at least equal to the Fund's exposure (any accrued but unpaid net amounts owed by the Fund to any counterparty), on a marked- to-market basis (when the Fund is the buyer), or the full notional amount of the swap (minus any amounts owed to the Fund) (when the Fund is the seller). Such segregation or " earmarking " seeks to ensure that the Fund has assets available to satisfy its obligations with respect to the transaction and could have the effect of limiting any potential leveraging of the Fund's portfolio. Such segregation or " earmarking " will not limit the Fund's exposure to loss.

The Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act") and related regulatory developments require the clearing and exchange-trading of many standardized OTC derivative instruments that the CFTC and SEC recently defined as "swaps" including non-deliverable foreign exchange forwards, OTC foreign exchange options and swap options. Mandatory exchange-trading and clearing is occurring on a phased-in basis based on type of market participant and CFTC approval of contracts for central clearing. The Adviser will continue to monitor developments in this area, particularly to the extent regulatory changes affect a Fund's ability to enter into swap agreements.

Whether a Fund's use of swap agreements or swap options will be successful in furthering its investment objective will depend on the Adviser's ability to predict correctly whether certain types of investments are likely to produce greater returns than other investments. Moreover, a Fund bears the risk of loss of the amount expected to be received under a swap agreement in the event of the default or bankruptcy of a swap agreement counterparty. A Fund will enter into OTC swap agreements only with counterparties that meet certain standards of creditworthiness. Certain restrictions imposed on a Fund by the Internal Revenue Code may limit the Fund's ability to use swap agreements. It is possible that developments in the swaps market, including additional government regulation, could adversely affect a Fund's ability to terminate existing swap agreements or to realize amounts to be received under such agreements.

Swaps are highly specialized instruments that require investment techniques, risk analyses, and tax planning different from those associated with traditional investments. The use of a swap requires an understanding not only of the reference asset, reference rate, or index but also of the swap itself, without the benefit of observing the performance of the swap under all possible market conditions. Because OTC swap agreements are two-party contracts that may be subject to contractual restrictions on transferability and termination and because they may have remaining terms of greater than seven days, swap agreements may be considered to be illiquid and subject to a Fund's limitation on investments in illiquid securities. However, the Trust has adopted procedures pursuant to which the Adviser may determine swaps to be liquid under certain circumstances. To the extent that a swap is not liquid, it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price, which may result in significant losses.

Like most other investments, swap agreements are subject to the risk that the market value of the instrument will change in a way detrimental to a Fund's interest. A Fund bears the risk that the Adviser will not accurately forecast future market trends or the values of assets, reference rates, indexes, or other economic factors in establishing swap positions for the Fund. If the Adviser attempts to use a swap as a hedge against, or as a substitute for, a portfolio investment, a Fund will be exposed to the risk that the swap will have or will develop imperfect or no correlation with the portfolio investment. This could cause substantial losses for a Fund. While hedging strategies involving swap instruments can reduce the risk of loss, they can also reduce the opportunity for gain or even result in losses by offsetting favorable price movements in other Fund investments. Many swaps are complex and often valued subjectively.

Synthetic Equity Swaps. The Funds may also enter into synthetic equity swaps, in which one party to the contract agrees to pay the other party the total return earned or realized on a particular "notional amount" of value of an underlying equity security including any dividends distributed by the underlying security. The other party to the contract makes regular payments, typically at a fixed rate or at a floating rate based on LIBOR or other variable interest rate based on the notional amount. The notional amount is not invested in the reference security. Similar to currency swaps, synthetic equity swaps are generally entered into on a net basis, which means the two payment streams are netted out and the Funds will either pay or receive the net amount. The Funds will enter into a synthetic equity swap instead of purchasing the reference security when the synthetic equity swap provides a more efficient or less expensive way of gaining exposure to a security compared with a direct investment in the security.

Correlation Risk. In certain cases, the value of derivatives may not correlate perfectly, or at all, with the value of the assets, reference rates or indexes they are designed to closely track. In this regard, certain funds seek to achieve their investment objectives, in part, by investing in derivatives positions that are designed to closely track the performance (or inverse performance) of an index on a daily basis. However, the overall investment strategies of a Fund is not designed or expected to produce returns which replicate the performance (or inverse performance) of the particular index, and the degree of variation could be substantial, particularly over longer periods. There are a number of factors which may prevent a mutual fund, or derivatives or other strategies used by the Fund, from achieving desired correlation (or inverse correlation) with an index. These may include, but are not limited to: (i) the impact of fund fees, expenses and transaction costs, including borrowing and brokerage costs/bid-ask spreads, which are not reflected in index returns; (ii) differences in the timing of daily calculations of the value of an index and the timing of the valuation of derivatives, securities and other assets held by the Fund and the determination of the NAV of fund shares; (iii) disruptions or illiquidity in the markets for derivative instruments or securities in which the Fund invests; (iv) the Fund having exposure to or holding less than all of the securities in the underlying index and/or having exposure to or holding securities not included in the underlying index; (v) large or unexpected movements of assets into and out of the Fund (due to share purchases or redemptions, for example), potentially resulting in the Fund being over- or under-exposed to the index; (vi) the impact of accounting standards or changes thereto; (vii) changes to the applicable index that are not disseminated in advance; and (viii) a possible need to conform the Fund's portfolio holdings to comply with investment restrictions or policies or regulatory or tax law requirements.

Risk of Potential Government Regulation of Derivatives. It is possible that additional government regulation of various types of derivative instruments, including futures, options and swap agreements, may limit or prevent a Fund from using such instruments potentially to the detriment of a Fund. It is impossible to fully predict the effects of past, present or future legislation and regulation in this area, but the effects could be substantial and adverse. It is possible that legislative and regulatory activity could limit or restrict the ability of a Fund to use certain instruments as a part of its investment strategy. Limits or restrictions applicable to the counterparties with which a Fund engages in derivative transactions could also prevent the Fund from using certain instruments.

There is a possibility of future regulatory changes altering, perhaps to a material extent, the nature of an investment in a Fund or the ability of a Fund to continue to implement their investment strategies. The futures, options and swaps markets are subject to comprehensive statutes, regulations, and margin requirements. In addition, the SEC, CFTC and the exchanges are authorized to take extraordinary actions in the event of a market emergency, including, for example, the implementation or reduction of speculative position limits, the implementation of higher margin requirements, the establishment of daily price limits and the suspension of trading. The regulation of futures, options and swaps transactions in the U.S. is a rapidly changing area of law and is subject to modification by government and judicial action.

In particular, the Dodd-Frank Act sets forth a legislative framework for OTC derivatives, including financial instruments, such as swaps, in which the Funds may invest. Title VII of the Dodd-Frank Act makes broad changes to the OTC derivatives market, grants significant new authority to the SEC and the CFTC to regulate OTC derivatives and market participants, and requires clearing and exchange trading of many OTC derivatives transactions.

Provisions in the Dodd-Frank Act include new capital and margin requirements and the mandatory use of clearinghouse mechanisms for many OTC derivative transactions. The CFTC, SEC and other federal regulators have been developing the rules and regulations enacting the provisions of the Dodd-Frank Act. Because there is a prescribed phase-in period during which most of the mandated rulemaking and regulations will be implemented, it is not possible at this time to gauge the exact nature and full scope of the impact of the Dodd-Frank Act on any of the Funds. However, swap dealers, major market participants and swap counterparties are experiencing, and will continue to experience, new and additional regulations, requirements, compliance burdens and associated costs. The new law and the rules to be promulgated thereunder may negatively impact a Fund's ability to meet its investment objective either through limits or requirements imposed on it or upon its counterparties. In particular, new position limits imposed on a Fund or its counterparties may impact that Fund's ability to invest in futures, options and swaps in a manner that efficiently meets its investment objective. New requirements even if not directly applicable to the Funds, including capital requirements, changes to the CFTC speculative position limits regime and mandatory clearing, may increase the cost of a Fund's investments and cost of doing business, which could adversely affect investors.

Structured Products

The Funds may invest in structured products, including instruments such as credit-linked securities and structured notes, which are potentially high-risk derivatives. For example, a structured product may combine a traditional stock, bond, or commodity with an option or forward contract. Generally, the principal amount, amount payable upon maturity or redemption, or interest rate of a structured product is tied (positively or negatively) to the price of some commodity, currency or securities index or another interest rate or some other economic factor (each a “benchmark”). The interest rate or (unlike most fixed income securities) the principal amount payable at maturity of a structured product may be increased or decreased, depending on changes in the value of the benchmark. An example of a structured product could be a bond issued by an oil company that pays a small base level of interest with additional interest that accrues in correlation to the extent to which oil prices exceed a certain predetermined level. Such a structured product would be a combination of a bond and a call option on oil.

Structured products can be used as an efficient means of pursuing a variety of investment goals, including currency hedging, duration management, and increased total return. Structured products may not bear interest or pay dividends. The value of a structured product or its interest rate may be a multiple of a benchmark and, as a result, may be leveraged and move (up or down) more steeply and rapidly than the benchmark. These benchmarks may be sensitive to economic and political events, such as commodity shortages and currency devaluations, which cannot be readily foreseen by the purchaser of a structured product. Under certain conditions, the redemption value of a structured product could be zero. Thus, an investment in a structured product may entail significant market risks that are not associated with a similar investment in a traditional, U.S. dollar-denominated bond that has a fixed principal amount and pays a fixed rate or floating rate of interest. The purchase of structured products also exposes the Funds to the credit risk of the issuer of the structured product. These risks may cause significant fluctuations in the NAV of the Funds.

Credit-Linked Securities. Credit-linked securities are issued by a limited purpose trust or other vehicle that, in turn, invests in a basket of derivative instruments, such as credit default swaps, interest rate swaps and other securities, in order to provide exposure to certain high yield or other fixed income markets. For example, the Funds may invest in credit-linked securities as a cash management tool in order to gain exposure to the high yield markets and/or to remain fully invested when more traditional income producing securities are not available. Like an investment in a bond, investments in credit-linked securities represent the right to receive periodic income payments (in the form of distributions) and payment of principal at the end of the term of the security. However, these payments are conditioned on the trust’s receipt of payments from, and the trust’s potential obligations to, the counterparties to the derivative instruments and other securities in which the trust invests. For instance, the trust may sell one or more credit default swaps, under which the trust would receive a stream of payments over the term of the swap agreements provided that no event of default has occurred with respect to the referenced debt obligation upon which the swap is based. If a default occurs, the stream of payments may stop and the trust would be obligated to pay the counterparty the par (or other agreed upon value) of the referenced debt obligation. This, in turn, would reduce the amount of income and principal that the Funds would receive as an investor in the trust. The Funds’ investments in these instruments are indirectly subject to the risks associated with derivative instruments, including, among others, credit risk, default or similar event risk, counterparty risk, interest rate risk, leverage risk and management risk. It is expected that the securities will be exempt from registration under the 1933 Act. Accordingly, there may be no established trading market for the securities and they may constitute illiquid investments.

Structured Notes and Indexed Securities. Structured notes are derivative debt securities, the interest rate or principal of which is determined by an unrelated indicator (for example, a currency, security, commodity or index thereof). The terms of the instrument may be “structured” by the purchaser and the borrower issuing the note. Indexed securities may include structured notes as well as securities other than debt securities, the interest rate or principal of which is determined by an unrelated indicator. Indexed securities may include a multiplier that multiplies the indexed element by a specified factor and, therefore, the value of such securities may be very volatile. The terms of the structured and indexed securities may provide that in certain circumstances no principal is due at maturity and therefore, may result in a loss of invested capital. Structured and indexed securities may be positively or negatively indexed, so that appreciation of the reference index may produce an increase or a decrease in the interest rate or the value of the structured note or indexed security at maturity may be calculated as a specified multiple of the change in the value of the reference: therefore, the value of such security may be very volatile. Structured notes and indexed securities may entail a greater degree of market risk than other types of debt securities because the investor bears the risk of the reference. Structured notes or indexed securities also may be more volatile, less liquid and more difficult to accurately price than less complex securities and instruments or more traditional debt securities. To the extent a Fund invests in these notes and securities, however, the Adviser analyzes these notes and securities in its overall assessment of the effective duration of such Fund’s portfolio in an effort to monitor such Fund’s interest rate risk.

Certain issuers of structured products may be deemed to be investment companies as defined in the 1940 Act. As a result, the Funds' investments in these structured products may be subject to limits applicable to investments in investment companies and may be subject to restrictions contained in the 1940 Act.

DOLLAR ROLLS. The Fund may enter into dollar roll agreements, which are similar to reverse repurchase agreements. Dollar rolls are transactions in which securities are sold by the Fund for delivery in the current month and the Fund simultaneously contracts to repurchase substantially similar securities on a specified future date. Any difference between the sale price and the purchase price is netted against the interest income foregone on the securities sold to arrive at an implied borrowing rate. Alternatively, the sale and purchase transactions can be executed at the same price, with the Fund being paid a fee as consideration for entering into the commitment to purchase. Dollar rolls may be renewed prior to cash settlement and initially may involve only a firm commitment agreement by the Fund to buy a security. If the broker-dealer to which the Fund sells the security becomes insolvent, the Fund's right to repurchase the security may be restricted. At the time the Fund enters into a dollar roll, it will place in a segregated custodial account assets such as U.S. Government securities or other liquid, high grade debt securities consistent with the Fund's investment restrictions having a value equal to the repurchase price (including accrued interest) and will subsequently monitor the account to ensure that such equivalent value is maintained.

EVENT-LINKED EXPOSURE. The Fund may obtain event-linked exposure by investing in "event-linked bonds" or "event-linked swaps," or implement "event-linked strategies." Event-linked exposure results in gains that typically are contingent on the non-occurrence of a specific "trigger" event, such as a hurricane, earthquake or other physical or weather-related phenomena. Some event-linked bonds are commonly referred to as "catastrophe bonds." They may be issued by government agencies, insurance companies, reinsurers, special purpose corporations or other on-shore or off-shore entities (such special purpose entities are created to accomplish a narrow and well-defined objective, such as the issuance of a note in connection with a reinsurance transaction). If a trigger event causes losses exceeding a specific amount in the geographic region and time period specified in a bond, the Fund, when investing in the bond may lose a portion or all of its principal invested in the bond. If no trigger event occurs, the Fund will recover its principal plus interest. For some event-linked bonds, the trigger event or losses may be based on company-wide losses, index-portfolio losses, industry indices or readings of scientific instruments rather than specified actual losses. Often the event-linked bonds provide for extensions of maturity that are mandatory, or optional at the discretion of the issuer, in order to process and audit loss claims in those cases where a trigger event has, or possibly has, occurred. An extension of maturity may increase volatility. In addition to the specified trigger events, event-linked bonds may also expose the Fund to certain unanticipated risks including but not limited to issuer risk, credit risk, counterparty risk, adverse regulatory or jurisdictional interpretations and adverse tax consequences.

Event-linked bonds are a relatively new type of financial instrument. As such, there is no significant trading history of these securities, and there can be no assurance that a liquid market in these instruments will develop. See "Illiquid Securities" below. Lack of a liquid market may impose the risk of higher transaction costs and the possibility that the Fund may be forced to liquidate positions when it would not be advantageous to do so. Event-linked bonds are typically rated, and the Fund will only invest in catastrophe bonds that meet the credit quality requirements for the Fund.

EQUITY-LINKED SECURITIES. The Funds may invest in equity-linked securities. Equity-linked securities are privately issued securities whose investment results are designed to correspond generally to the performance of a specified stock index or "basket" of stocks, or sometimes a single stock. To the extent that the Funds invest in an equity-linked security whose return corresponds to the performance of a foreign securities index or one or more foreign stocks, investing in equity-linked securities will involve risks similar to the risks of investing in foreign equity securities. See "Foreign Securities" below. In addition, the Funds bear the risk that the issuer of an equity-linked security may default on its obligations under the security. Equity-linked securities are often used for many of the same purposes as, and share many of the same risks with, derivative instruments such as index futures on stock indexes, zero-strike options and warrants and swap agreements. See "Derivative Instruments" above. Equity-linked securities may be considered illiquid and thus subject to a Fund's restriction on investments in illiquid securities.

FIXED INCOME SECURITIES WITH BUY-BACK FEATURES. Fixed income securities with buy-back features enable the Fund to recover principal upon tendering the securities to the issuer or a third party. Letters of credit issued by domestic or foreign banks often support these buy-back features. In evaluating a foreign bank's credit, the Adviser considers whether adequate public information about the bank is available and whether the bank may be subject to unfavorable political or economic developments, currency controls or other governmental restrictions that could adversely affect the bank's ability to honor its commitment under the letter of credit. Buy-back features include standby commitments, put bonds and demand features.

Standby Commitments. The Fund may acquire standby commitments from broker-dealers, banks or other financial intermediaries to enhance the liquidity of portfolio securities. A standby commitment entitles the Fund to same day settlement at amortized cost plus accrued interest, if any, at the time of exercise. The amount payable by the issuer of the standby commitment during the time that the commitment is exercisable generally approximates the market value of the securities underlying the commitment. Standby commitments are subject to the risk that the issuer of a commitment may not be in a position to pay for the securities at the time that the commitment is exercised.

Ordinarily, the Fund will not transfer a standby commitment to a third party, although the Fund may sell securities subject to a standby commitment at any time. The Fund may purchase standby commitments separate from or in conjunction with the purchase of the securities subject to the commitments. In the latter case, the Fund may pay a higher price for the securities acquired in consideration for the commitment.

Put Bonds. A put bond (also referred to as a tender option or third party bond) is a bond created by coupling an intermediate or long-term fixed rate bond with an agreement giving the holder the option of tendering the bond to receive its par value. As consideration for providing this tender option, the sponsor of the bond (usually a bank, broker-dealer or other financial intermediary) receives periodic fees that equal the difference between the bond's fixed coupon rate and the rate (determined by a remarketing or similar agent) that would cause the bond, coupled with the tender option, to trade at par. By paying the tender offer fees, the Fund in effect holds a demand obligation that bears interest at the prevailing short-term rate. Any investments in tender option bonds by the Fund will be accounted for subject to Financial Accounting Standards Board Statement No. 140 and amendments thereto.

In selecting put bonds for the Fund, the Adviser takes into consideration the creditworthiness of the issuers of the underlying bonds and the creditworthiness of the providers of the tender option features. A sponsor may withdraw the tender option feature if the issuer of the underlying bond defaults on interest or principal payments, the bond's rating is downgraded or, in the case of a municipal bond, the bond loses its tax-exempt status.

Demand Features. Many variable rate securities carry demand features that permit the holder to demand repayment of the principal amount of the underlying securities plus accrued interest, if any, upon a specified number of days' notice to the issuer or its agent. A demand feature may be exercisable at any time or at specified intervals. Variable rate securities with demand features are treated as having a maturity equal to the time remaining before the holder can next demand payment of principal. The issuer of a demand feature instrument may have a corresponding right to prepay the outstanding principal of the instrument plus accrued interest, if any, upon notice comparable to that required for the holder to demand payment.

FOREIGN CURRENCY AND RELATED TRANSACTIONS. A Fund may invest in foreign currency-denominated securities and may purchase and sell foreign currency options and foreign currency futures contracts and related options (see "Derivative Instruments") and may engage in foreign currency transactions either on a spot (cash) basis at the rate prevailing in the currency exchange market at the time or through forward currency contracts ("forwards") with terms generally of less than one year. The Funds may engage in these transactions in order to protect against uncertainty in the level of future foreign exchange rates in the purchase and sale of securities. The Funds may also use foreign currency options and foreign currency forward contracts to increase exposure to a foreign currency or to shift exposure to foreign currency fluctuations from one country to another.

A forward involves an obligation to purchase or sell a specific currency at a future date, which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. These contracts may be bought or sold to protect a Fund against a possible loss resulting from an adverse change in the relationship between foreign currencies and the U.S. dollar or to increase exposure to a particular foreign currency. Open positions in forwards used for non-hedging purposes will be covered by the segregation or “earmarking” of assets determined to be liquid by the Adviser in accordance with procedures established by the Board of Trustees and are marked-to-market daily. Although forwards are intended to minimize the risk of loss due to a decline in the value of the hedged currencies, at the same time, they tend to limit any potential gain which might result should the value of such currencies increase.

Forwards will be used primarily to adjust the foreign exchange exposure of each Fund with a view to protecting the outlook, and the Funds might be expected to enter into such contracts under the following circumstances:

- (i) When the Adviser desires to lock in the U.S. dollar price on the purchase or sale of a security denominated in a foreign currency.
- (ii) If a particular currency is expected to decrease against another currency, a Fund may sell the currency expected to decrease and purchase a currency which is expected to increase against the currency sold in an amount approximately equal to some or all of the Fund’s portfolio holdings denominated in the currency sold.
- (iii) If the Adviser wants to eliminate substantially all of the risk of owning a particular currency, and/or if the Adviser thinks that a Fund can benefit from price appreciation in a given country’s bonds but does not want to hold the currency, it may employ a direct hedge back into the U.S. dollar. In either case, a Fund would enter into a forward contract to sell the currency in which a portfolio security is denominated and purchase U.S. dollars at an exchange rate established at the time it initiated the contract. The cost of the direct hedge transaction may offset most, if not all, of the yield advantage offered by the foreign security, but a Fund would hope to benefit from an increase (if any) in value of the bond.
- (iv) The Adviser might choose to use a proxy hedge, which may be less costly than a direct hedge. In this case, a Fund, having purchased a security, will sell a currency whose value is believed to be closely linked to the currency in which the security is denominated. Interest rates prevailing in the country whose currency was sold would be expected to be closer to those in the U.S. and lower than those of securities denominated in the currency of the original holding. This type of hedging entails greater risk than a direct hedge because it is dependent on a stable relationship between the two currencies paired as proxies and the relationships can be very unstable at times.

Costs of Hedging. When a Fund purchases a foreign bond with a higher interest rate than is available on U.S. bonds of a similar maturity, the additional yield on the foreign bond could be substantially reduced or lost if the Fund were to enter into a direct hedge by selling the foreign currency and purchasing the U.S. dollar. This is what is known as the “cost” of hedging. Proxy hedging attempts to reduce this cost through an indirect hedge back to the U.S. dollar.

It is important to note that hedging costs are treated as capital transactions and are not, therefore, deducted from a Fund’s dividend distribution and are not reflected in its yield. Instead such costs will, over time, be reflected in a Fund’s NAV per share.

The forecasting of currency market movement is extremely difficult, and whether any hedging strategy will be successful is highly uncertain. Moreover, it is impossible to forecast with precision the market value of portfolio securities at the expiration of a foreign currency forward contract. Accordingly, a Fund may be required to buy or sell additional currency on the spot market (and bear the expense of such transaction) if the Adviser’s predictions regarding the movement of foreign currency or securities markets prove inaccurate. In addition, the use of cross-hedging transactions may involve special risks and may leave a Fund in a less advantageous position than if such a hedge had not been established. Because foreign currency forward contracts are privately negotiated transactions, there can be no assurance that a Fund will have flexibility to roll-over a foreign currency forward contract upon its expiration if it desires to do so. Additionally, there can be no assurance that the other party to the contract will perform its services thereunder.

The Funds may hold a portion of their assets in bank deposits denominated in foreign currencies, so as to facilitate investment in foreign securities as well as protect against currency fluctuations and the need to convert such assets into U.S. dollars (thereby also reducing transaction costs). To the extent these monies are converted back into U.S. dollars, the value of the assets so maintained will be affected favorably or unfavorably by changes in foreign currency exchange rates and exchange control regulations.

Tax Consequences of Hedging. Under applicable tax law, a Fund may be required to limit its gains from hedging in foreign currency forwards, futures and options. The extent to which these limits apply is subject to tax regulations as yet unissued. Hedging may also result in the application of the mark-to-market and straddle provisions of the IRC. Those provisions could result in an increase (or decrease) in the amount of taxable dividends paid by a Fund and could affect whether dividends paid by a Fund are classified as capital gains or ordinary income. See “Certain Material U.S. Federal Income Tax Considerations” below for additional information related to these tax issues.

Foreign Currency Exchange-Related Securities.

Foreign Currency Warrants. Foreign currency warrants such as Currency Exchange Warrants (“CEWs”) are warrants which entitle the holder to receive from their issuer an amount of cash (generally, for warrants issued in the United States, in U.S. dollars) which is calculated pursuant to a predetermined formula and based on the exchange rate between a specified foreign currency and the U.S. dollar as of the exercise date of the warrant. Foreign currency warrants generally are exercisable upon their issuance and expire as of a specified date and time. Foreign currency warrants have been issued in connection with U.S. dollar-denominated debt offerings by major corporate issuers in an attempt to reduce the foreign currency exchange risk which, from the point of view of prospective purchasers of the securities, is inherent in the international fixed-income marketplace. Foreign currency warrants may attempt to reduce the foreign exchange risk assumed by purchasers of a security by, for example, providing for a supplemental payment in the event that the U.S. dollar depreciates against the value of a major foreign currency such as the Japanese yen or the euro. The formula used to determine the amount payable upon exercise of a foreign currency warrant may make the warrant worthless unless the applicable foreign currency exchange rate moves in a particular direction (e.g., unless the U.S. dollar appreciates or depreciates against the particular foreign currency to which the warrant is linked or indexed). Foreign currency warrants are severable from the debt obligations with which they may be offered and may be listed on exchanges. Foreign currency warrants may be exercisable only in certain minimum amounts, and an investor wishing to exercise warrants who possesses less than the minimum number required for exercise may be required either to sell the warrants or to purchase additional warrants, thereby incurring additional transaction costs. In the case of any exercise of warrants, there may be a time delay between the time a holder of warrants gives instructions to exercise and the time the exchange rate relating to exercise is determined, during which time the exchange rate could change significantly, thereby affecting both the market and cash settlement values of the warrants being exercised. The expiration date of the warrants may be accelerated if the warrants should be delisted from an exchange or if their trading should be suspended permanently, which would result in the loss of any remaining “time value” of the warrants (i.e., the difference between the current market value and the exercise value of the warrants), and, in the case the warrants were “out-of-the-money,” in a total loss of the purchase price of the warrants. Warrants are generally unsecured obligations of their issuers and are not standardized foreign currency options issued by the Options Clearing Corporation (“OCC”). Unlike foreign currency options issued by OCC, the terms of foreign exchange warrants generally will not be amended in the event of governmental or regulatory actions affecting exchange rates or in the event of the imposition of other regulatory controls affecting the international currency markets. The initial public offering price of foreign currency warrants is generally considerably in excess of the price that a commercial user of foreign currencies might pay in the interbank market for a comparable option involving significantly larger amounts of foreign currencies. Foreign currency warrants are subject to significant foreign exchange risk, including risks arising from complex political or economic factors.

Principal Exchange Rate Linked Securities. Principal exchange rate linked securities (“PERLs”) are debt obligations the principal on which is payable at maturity in an amount that may vary based on the exchange rate between the U.S. dollar and a particular foreign currency at or about that time. The return on “standard” PERLs is enhanced if the foreign currency to which the security is linked appreciates against the U.S. dollar and is adversely affected by increases in the foreign exchange value of the U.S. dollar; “reverse” PERLs are like the “standard” securities, except that their return is enhanced by increases in the value of the U.S. dollar and adversely impacted by increases in the value of foreign currency. Interest payments on the securities are generally made in U.S. dollars at rates that reflect the degree of foreign currency risk assumed or given up by the purchaser of the notes (i.e., at relatively higher interest rates if the purchaser has assumed some of the foreign exchange risk, or relatively lower interest rates if the issuer has assumed some of the foreign exchange risk, based on the expectations of the current market). PERLs may in limited cases be subject to acceleration of maturity (generally, not without the consent of the holders of the securities), which may have an adverse impact on the value of the principal payment to be made at maturity.

Performance Indexed Paper. Performance indexed paper (“PIPs”) is U.S. dollar-denominated commercial paper the yield of which is linked to certain foreign exchange rate movements. The yield to the investor on PIPs is established at maturity as a function of spot exchange rates between the U.S. dollar and a designated currency as of or about that time (generally, the index maturity two days prior to maturity). The yield to the investor will be within a range stipulated at the time of purchase of the obligation, generally with a guaranteed minimum rate of return that is below, and a potential maximum rate of return that is above, market yields on U.S. dollar-denominated commercial paper, with both the minimum and maximum rates of return on the investment corresponding to the minimum and maximum values of the spot exchange rate two business days prior to maturity.

FOREIGN SECURITIES AND EMERGING MARKETS. The Funds may invest in foreign securities, including securities from issuers located in emerging market countries. Investing in foreign securities involves risks not typically associated with investing in securities of companies organized and operated in the United States that can increase the chances that a Fund will lose money. In addition to equity securities, foreign investments of the Funds may include: (a) debt obligations issued or guaranteed by foreign sovereign governments or their agencies, authorities, instrumentalities or political subdivisions, including a foreign state, province or municipality; (b) debt obligations of supranational organizations; (c) debt obligations of foreign banks and bank holding companies; (d) debt obligations of domestic banks and corporations issued in foreign currencies; (e) debt obligations denominated in the Euro; and (f) foreign corporate debt securities and commercial paper. Such securities may include loan participations and assignments, convertible securities and zero-coupon securities.

Currency Risk and Exchange Risk. Because foreign securities generally are denominated and pay dividends or interest in foreign currencies, the value of a Fund that invests in foreign securities as measured in U.S. dollars will be affected favorably or unfavorably by changes in exchange rates. Generally, when the U.S. dollar rises in value against a foreign currency, a security denominated in that currency loses value because the currency is worth fewer U.S. dollars. Conversely, when the U.S. dollar decreases in value against a foreign currency, a security denominated in that currency gains value because the currency is worth more U.S. dollars. This risk, generally known as “currency risk,” means that a stronger U.S. dollar will reduce returns for U.S. investors while a weak U.S. dollar will increase those returns.

Foreign Market Risk. A fund that may invest in foreign securities offers the potential for more diversification than a fund that invests only in the United States because securities traded on foreign markets have often (though not always) performed differently from securities traded in the United States. However, such investments often involve risks not present in U.S. investments that can increase the chances that a Fund will lose money. In particular, a Fund is subject to the risk that, because there are generally fewer investors on foreign exchanges and a smaller number of shares traded each day, it may be difficult for the Fund to buy and sell securities on those exchanges. In addition, prices of foreign securities may fluctuate more than prices of securities traded in the United States. Investments in foreign markets may also be adversely affected by governmental actions such as the imposition of punitive taxes. In addition, the governments of certain countries may prohibit or impose substantial restrictions on foreign investing in their capital markets or in certain industries. Any of these actions could severely affect security prices, impair a Fund’s ability to purchase or sell foreign securities or transfer the Fund’s assets or income back into the United States or otherwise adversely affect the Fund’s operations. Other potential foreign market risks include exchange controls, difficulties in pricing securities, defaults on foreign government securities, difficulties in enforcing favorable legal judgments in foreign courts and political and social conditions, such as diplomatic relations, confiscatory taxation, expropriation, limitation on the removal of funds or assets or imposition of (or change in) exchange control regulations. Legal remedies available to investors in certain foreign countries may be less extensive than those available to investors in the United States or other foreign countries. In addition, changes in government administrations or economic or monetary policies in the United States or abroad could result in appreciation or depreciation of portfolio securities and could favorably or adversely affect a Fund’s operations.

Public Availability of Information. In general, less information is publicly available with respect to foreign issuers than is available with respect to U.S. companies. Most foreign companies are also not subject to the uniform accounting and financial reporting requirements applicable to issuers in the United States. While the volume of transactions effected on foreign stock exchanges has increased in recent years, it remains appreciably below that of the New York Stock Exchange (the “Exchange”). Accordingly, the Funds’ foreign investments may be less liquid and their prices may be more volatile than comparable investments in securities in U.S. companies. In addition, there is generally less government supervision and regulation of securities exchanges, brokers and issuers in foreign countries than in the United States.

Settlement Risk. Settlement and clearance procedures in certain foreign markets differ significantly from those in the United States. Foreign settlement procedures and trade regulations also may involve certain risks (such as delays in payment for or delivery of securities) not typically generated by the settlement of U.S. investments. Communications between the United States and emerging market countries may be unreliable, increasing the risk of delayed settlements or losses of security certificates in markets that still rely on physical settlement. Settlements in certain foreign countries at times have not kept pace with the number of securities transactions; these problems may make it difficult for a Fund to carry out transactions. If a Fund cannot settle or is delayed in settling a purchase of securities, it may miss attractive investment opportunities and certain of its assets may be uninvested with no return earned thereon for some period. If a Fund cannot settle or is delayed in settling a sale of securities, it may lose money if the value of the security then declines or, if it has contracted to sell the security to another party, the Fund could be liable to that party for any losses incurred. Dividends or interest on, or proceeds from the sale of, foreign securities may be subject to foreign taxes on income from sources in such countries.

Governmental Supervision and Regulation/Accounting Standards. Many foreign governments supervise and regulate stock exchanges, brokers and the sale of securities less than does the United States. Some countries may not have laws to protect investors comparable to the U.S. securities laws. For example, some foreign countries may have no laws or rules against insider trading. Insider trading occurs when a person buys or sells a company’s securities based on nonpublic information about that company. In addition, the U.S. Government has from time to time in the past imposed restrictions, through penalties and otherwise, on foreign investments by U.S. investors such as the Funds. Accounting standards in other countries are not necessarily the same as in the United States. If the accounting standards in another country do not require as much detail as U.S. accounting standards, it may be harder for Fund management to completely and accurately determine a company’s financial condition. Also, brokerage commissions and other costs of buying or selling securities often are higher in foreign countries than they are in the United States. This reduces the amount a Fund can earn on its investments.

Certain Risks of Holding Fund Assets Outside the United States. The Funds generally hold foreign securities and cash in foreign banks and securities depositories. Some foreign banks and securities depositories may be recently organized or new to the foreign custody business. In addition, there may be limited or no regulatory oversight over their operations. Also, the laws of certain countries may put limits on the Funds’ ability to recover assets if a foreign bank or depository or issuer of a security or any of their agents goes bankrupt. In addition, it is often more expensive for the Funds to buy, sell and hold securities in certain foreign markets than in the United States. The increased expense of investing in foreign markets reduces the amount a Fund can earn on its investments and typically results in a higher operating expense ratio for the Fund as compared to investment companies that invest only in the United States.

Foreign Economy Risk. The economies of certain foreign markets often do not compare favorably with that of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources and balance of payments position. Certain such economies may rely heavily on particular industries or foreign capital and are more vulnerable to diplomatic developments, the imposition of economic sanctions against a particular country or countries, changes in international trading patterns, trade barriers and other protectionist or retaliatory measures.

Sovereign Debt. The Funds may invest in sovereign debt. Investment in sovereign debt can involve a high degree of risk. The governmental entity that controls the repayment of sovereign debt may not be able or willing to repay the principal and/or interest when due in accordance with the terms of such debt. A governmental entity's willingness or ability to repay principal and interest due in a timely manner may be affected by, among other factors, its cash flow situation, the extent of its foreign reserves, the availability of sufficient foreign exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the governmental entity's policy towards the International Monetary Fund and the political constraints to which a governmental entity may be subject. Governmental entities may also be dependent on expected disbursements from foreign governments, multilateral agencies and others abroad to reduce principal and interest arrearages on their debt. The commitment on the part of these governments, agencies and others to make such disbursements may be conditioned on the implementation of economic reforms and/or economic performance and the timely service of such debtor's obligations. Failure to implement such reforms, achieve such levels of economic performance or repay principal or interest when due may result in the cancellation of such third parties' commitments to lend funds to the governmental entity, which may further impair such debtor's ability or willingness to timely service its debts. Consequently, governmental entities may default on their sovereign debt.

Holders of sovereign debt may be requested to participate in the rescheduling of such debt and to extend further loans to governmental entities. In the event of a default by a governmental entity, there may be few or no effective legal remedies for collecting on such debt.

Emerging Capital Markets. The Funds may invest in the securities of issuers domiciled in various countries with emerging capital markets. Specifically, a country with an emerging capital market is any country that the World Bank, the International Finance Corporation, the United Nations or its authorities has determined to have a low or middle income economy. Countries with emerging markets can be found in regions such as Asia, Latin America, Eastern Europe, the Middle East and Africa. The Emerging Markets Debt Fund may not invest 25% or more of its net assets in any one industry.

Investments in the securities of issuers domiciled in countries with emerging capital markets involve certain additional risks that do not generally apply to investments in securities of issuers in more developed capital markets, such as (i) low or non-existent trading volume, resulting in a lack of liquidity and increased volatility in prices for such securities, as compared to securities of comparable issuers in more developed capital markets; (ii) uncertain national policies and social, political and economic instability, increasing the potential for expropriation of assets, confiscatory taxation, high rates of inflation or unfavorable diplomatic developments; (iii) possible fluctuations in exchange rates, differing legal systems and the existence or possible imposition of exchange controls, custodial restrictions or other foreign or U.S. Governmental laws or restrictions applicable to such investments; (iv) national policies that may limit a Fund's investment opportunities such as restrictions on investment in issuers or industries deemed sensitive to national interests; and (v) the lack or relatively early development of legal structures governing private and foreign investments and private property. In addition to withholding taxes on investment income, some countries with emerging markets may impose differential capital gains taxes on foreign investors.

Political and economic structures in emerging market countries may be undergoing significant evolution and rapid development, and these countries may lack the social, political and economic stability characteristic of more developed countries. In such a dynamic environment, there can be no assurance that any or all of these capital markets will continue to present viable investment opportunities for the Funds. In the past, governments of such nations have expropriated substantial amounts of private property, and most claims of the property owners have never been fully settled. There is no assurance that such expropriations will not reoccur. In such an event, it is possible that a Fund could lose the entire value of its investments in the affected market. As a result the risks described above, including the risks of nationalization or expropriation of assets, may be heightened. In addition, unanticipated political or social developments may affect the value of investments in these countries and the availability to the Funds of additional investments. The small size and inexperience of the securities markets in certain of these countries and the limited volume of trading in securities in these countries may make investments in the countries illiquid and more volatile than investments in Japan or most Western European countries.

Also, there may be less publicly available information about issuers in emerging markets than would be available about issuers in more developed capital markets, and such issuers may not be subject to accounting, auditing and financial reporting standards and requirements comparable to those to which U.S. companies are subject. In certain countries with emerging capital markets, reporting standards vary widely. As a result, traditional investment measurements used in the United States, such as price/earnings ratios, may not be applicable. Emerging market securities may be substantially less liquid and more volatile than those of mature markets, and company shares may be held by a limited number of persons. This may adversely affect the timing and pricing of a Fund's acquisition or disposal of securities.

Practices in relation to settlement of securities transactions in emerging markets involve higher risks than those in developed markets, in part because the Funds will need to use brokers and counterparties that are less well capitalized, and custody and registration of assets in some countries may be unreliable. The possibility of fraud, negligence, undue influence being exerted by the issuer or refusal to recognize ownership exists in some emerging markets, and, along with other factors, could result in ownership registration being completely lost. The Funds would absorb any loss resulting from such registration problems and may have no successful claim for compensation.

Investments in non-dollar denominated securities including securities from issuers located in emerging market countries may be on either a currency hedged or unhedged basis, and the Funds may hold from time to time various foreign currencies pending investment or conversion into U.S. dollars. Some of these instruments may have the characteristics of futures contracts. In addition, the Funds may engage in foreign currency exchange transactions to seek to protect against changes in the level of future exchange rates which would adversely affect a Fund's performance. These investments and transactions involving foreign securities, currencies, options (including options that relate to foreign currencies), futures, hedging and cross-hedging are described below and under "Derivatives" and "Foreign Currency and Related Transactions."

Restrictions on Certain Investments. A number of publicly traded closed-end investment companies have been organized to facilitate indirect foreign investment in developing countries, and certain of such countries, such as Thailand, South Korea, Chile and Brazil, have specifically authorized such fund. There also are investment opportunities in certain of such countries in pooled vehicles that resemble open-end investment companies. Shares of certain investment companies may at times be acquired only at market prices representing premiums to their NAVs. If a Fund acquires shares of other investment companies, shareholders would bear both their proportionate share of expenses of the Fund (including management and advisory fees) and, indirectly, the expenses of such other investment companies.

Brady Bonds. The Funds' emerging market debt securities may include emerging market governmental debt obligations commonly referred to as Brady Bonds. Brady Bonds are securities created through the exchange of existing commercial bank loans to sovereign entities for new obligations in connection with debt restructurings under a debt restructuring plan introduced by former U.S. Secretary of the Treasury, Nicholas F. Brady (the "Brady Plan"). Brady Plan debt restructurings have been implemented in a number of countries, including: Argentina, Bolivia, Brazil, Bulgaria, Costa Rica, the Dominican Republic, Ecuador, Jordan, Mexico, Niger, Nigeria, Panama, Peru, the Philippines, Poland, Uruguay and Venezuela.

Brady Bonds may be collateralized or uncollateralized, are issued in various currencies (primarily the U.S. dollar) and are actively traded in the over-the-counter secondary market. Brady Bonds are not considered to be U.S. Government securities. U.S. dollar-denominated, collateralized Brady Bonds, which may be fixed rate par bonds or floating rate discount bonds, are generally collateralized in full as to principal by U.S. Treasury zero-coupon bonds having the same maturity as the Brady Bonds. Interest payments on these Brady Bonds generally are collateralized on a one-year or longer rolling-forward basis by cash or securities in an amount that, in the case of fixed rate bonds, is equal to at least one year of interest payments or, in the case of floating rate bonds, initially is equal to at least one year's interest payments based on the applicable interest rate at that time and is adjusted at regular intervals thereafter. Certain Brady Bonds are entitled to "value recovery payments" in certain circumstances, which in effect constitute supplemental interest payments but generally are not collateralized. For example, some Mexican and Venezuelan Brady Bonds include attached value recovery options, which increase interest payments if oil revenues rise. Brady Bonds are often viewed as having three or four valuation components: (i) the collateralized repayment of principal at final maturity; (ii) the collateralized interest payments; (iii) the uncollateralized interest payments; and (iv) any uncollateralized repayment of principal at maturity (the uncollateralized amounts constitute the "residual risk").

Most Mexican Brady Bonds issued to date have principal repayments at final maturity fully collateralized by U.S. Treasury zero-coupon bonds (or comparable collateral denominated in other currencies) and interest coupon payments collateralized on an 18-month rolling-forward basis by funds held in escrow by an agent for the bondholders. A significant portion of the Venezuelan Brady Bonds and the Argentine Brady Bonds issued to date have repayments at final maturity collateralized by U.S. Treasury zero-coupon bonds (or comparable collateral denominated in other currencies) and/or interest coupon payments collateralized on a 14-month (for Venezuela) or 12-month (for Argentina) rolling-forward basis by securities held by the Federal Reserve Bank of New York as collateral agent.

Brady Bonds involve various risk factors described above associated with investing in foreign securities, including the history of defaults with respect to commercial bank loans by public and private entities of countries issuing Brady Bonds. In light of the residual risk of Brady Bonds and, among other factors, the history of defaults, investments in Brady Bonds are considered speculative. There can be no assurance that Brady Bonds in which the Fund may invest will not be subject to restructuring arrangements or to requests for new credit, which may cause the Fund to suffer a loss of interest or principal on any of its holdings.

GUARANTEED INVESTMENT CONTRACTS. The Fund may invest in guaranteed investment contracts (“GIC”). A GIC is a general obligation of an insurance company. A GIC is generally structured as a deferred annuity under which the purchaser agrees to pay a given amount of money to an insurer (either in a lump sum or in installments) and the insurer promises to pay interest at a guaranteed rate (either fixed or variable) for the life of the contract. Some GICs provide that the insurer may periodically pay discretionary excess interest over and above the guaranteed rate. At the GIC’s maturity, the purchaser generally is given the option of receiving payment or an annuity. Certain GICs may have features that permit redemption by the issuer at a discount from par value.

Generally, GICs are not assignable or transferable without the permission of the issuer. As a result, the acquisition of GICs is subject to the limitations applicable to the Fund’s acquisition of illiquid and restricted securities. The holder of a GIC is dependent on the creditworthiness of the issuer as to whether the issuer is able to meet its obligations.

HYBRID INSTRUMENTS. A hybrid instrument is a type of potentially high-risk derivative that combines a traditional stock, bond or commodity with an option or forward contract. Generally, the principal amount, amount payable upon maturity or redemption or interest rate of a hybrid is tied (positively or negatively) to the price of some commodity, currency or securities index or another interest rate or some other economic factor (each a “benchmark”). The interest rate or (unlike most fixed income securities) the principal amount payable at maturity of a hybrid security may be increased or decreased, depending on changes in the value of the benchmark. An example of a hybrid could be a bond issued by an oil company that pays a small base level of interest with additional interest that accrues in correlation to the extent to which oil prices exceed a certain predetermined level. Such a hybrid instrument would be a combination of a bond and a call option on oil.

Hybrids can be used as an efficient means of pursuing a variety of investment goals, including currency hedging duration management and increased total return. Hybrids may not bear interest or pay dividends. The value of a hybrid or its interest rate may be a multiple of a benchmark and, as a result, may be leveraged and move (up or down) more steeply and rapidly than the benchmark. These benchmarks may be sensitive to economic and political events, such as commodity shortages and currency devaluations, which cannot be readily foreseen by the purchaser of a hybrid. Under certain conditions, the redemption value of a hybrid could be zero. Thus, an investment in a hybrid may entail significant market risks that are not associated with a similar investment in a traditional, U.S. dollar-denominated bond that has a fixed principal amount and pays a fixed rate or floating rate of interest. The purchase of hybrids also exposes the Fund to the credit risk of the issuer of the hybrids. These risks may cause significant fluctuations in the NAV of the Fund.

Certain hybrid instruments may provide exposure to the commodities markets. These are derivative securities with one or more commodity-linked components that have payment features similar to commodity futures contracts, commodity options or similar instruments. Commodity-linked hybrid instruments may be either equity or debt securities, leveraged or unleveraged, and are considered hybrid instruments because they have both security and commodity-like characteristics. A portion of the value of these instruments may be derived from the value of a commodity, futures contract, index or other economic variable. The Fund will only invest in commodity-linked hybrid instruments that qualify under applicable rules of the CFTC for an exemption from the provisions of the CEA.

Certain issuers of structured products such as hybrid instruments may be deemed to be investment companies as defined in the 1940 Act. As a result, the Fund’s investments in these products may be subject to limits applicable to investments in investment companies and may be subject to restrictions contained in the 1940 Act.

ILLIQUID SECURITIES. A Fund may not knowingly invest more than 15% of its net assets in illiquid securities. Illiquid securities are securities that cannot be disposed of within seven days at approximately the value at which they are being carried on a Fund's books. The Board of Trustees has the ultimate responsibility for determining whether specific securities are liquid or illiquid. The Board of Trustees has delegated the function of making day to day determinations of liquidity to the Adviser pursuant to guidelines approved by the Board of Trustees. The Adviser will monitor the liquidity of securities held by a Fund and report periodically on such decisions to the Board of Trustees. If the limitations on illiquid securities are exceeded, other than by a change in market values, the condition will be reported by the Funds' Adviser to the Board of Trustees. Illiquid securities would generally include repurchase agreements with notice/termination dates in excess of seven days and certain securities which are subject to trading restrictions because they are not registered under the Securities Act of 1933, as amended (the "1933 Act"). External market conditions may impact the liquidity of portfolio securities and may cause a Fund to sell or divest certain illiquid securities in order to comply with its limitation on holding illiquid securities, which may result in realized losses to the Fund.

INFLATION-PROTECTED DEBT SECURITIES. The Funds may invest in inflation-protected debt securities or inflation-indexed bonds, which are fixed income securities whose value is periodically adjusted according to the rate of inflation. Two structures are common. The U.S. Treasury and some other issuers utilize a structure that accrues inflation into the principal value of the bond. Most other issuers pay out the Consumer Price Index ("CPI") accruals as part of a semi-annual coupon.

Treasury Inflation Protected Securities ("TIPS") have maturities of approximately five, ten or thirty years, although it is possible that securities with other maturities will be issued in the future. The U.S. Treasury securities pay interest on a semi-annual basis equal to a fixed percentage of the inflation-adjusted principal amount. For example, if a Fund purchased TIPS with a par value of \$1,000 and a 3% real rate of return coupon (payable 1.5% semi-annually), and the rate of inflation over the first six months was 1%, the mid-year par value of the bond would be \$1,010 and the first semi-annual interest payment would be \$15.15 (\$1,010 times 1.5%). If inflation during the second half of the year resulted in the whole year's inflation equaling 3%, the end-of-year par value of the bond would be \$1,030 and the second semi-annual interest payment would be \$15.45 (\$1,030 times 1.5%).

If the periodic adjustment rate measuring inflation falls, the principal value of inflation-indexed bonds will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of TIPS, even during a period of deflation. However, the current market value of the bonds is not guaranteed and will fluctuate. A Fund may also invest in other inflation-related bonds which may or may not provide a similar guarantee. If a guarantee of principal is not provided, the adjusted principal value of the bond repaid at maturity may be less than the original principal amount.

The value of inflation-indexed bonds is expected to change in response to changes in real interest rates. Real interest rates in turn are tied to the relationship between nominal interest rates and the rate of inflation. Therefore, if the rate of inflation rises at a faster rate than nominal interest rates, real interest rates might decline, leading to an increase in value of inflation-indexed bonds. In contrast, if nominal interest rates increase at a faster rate than inflation, real interest rates might rise, leading to a decrease in value of inflation-indexed bonds.

While these securities are expected to be protected from long-term inflationary trends, short-term increases in inflation may lead to a decline in value. If interest rates rise due to reasons other than inflation (for example, due to changes in currency exchange rates), investors in these securities may not be protected to the extent that the increase is not reflected in the bond's inflation measure.

The periodic adjustment of U.S. inflation-indexed bonds is tied to the Consumer Price Index for Urban Consumers ("CPI-U"), which is calculated monthly by the U.S. Bureau of Labor Statistics. The CPI-U is a measurement of changes in the cost of living, made up of components such as housing, food, transportation and energy. Inflation-indexed bonds issued by a foreign government are generally adjusted to reflect a comparable inflation index calculated by that government. There can be no assurance that the CPI-U or any foreign inflation index will accurately measure the real rate of inflation in the prices of goods and services. Moreover, there can be no assurance that the rate of inflation in a foreign country will be correlated to the rate of inflation in the United States.

Any increase in the principal amount of an inflation-indexed bond will be considered taxable ordinary income, even though investors do not receive their principal until maturity.

INVESTMENT COMPANY SECURITIES AND EXCHANGE-TRADED FUNDS. Each Fund may invest in investment company securities issued by open-end and closed-end investment companies, including exchange-traded funds (“ETFs”). Such investments are subject to limitations prescribed by the 1940 Act unless an SEC exemption is applicable, or as may be permitted by rules under the 1940 Act or SEC staff interpretations thereof. The 1940 Act limitations currently provide, in part, that the Funds may not purchase shares of an investment company if: (a) such a purchase would cause a Fund to own in the aggregate more than 3% of the total outstanding voting stock of the investment company; (b) such a purchase would cause a Fund to have more than 5% of its total assets invested in the investment company; or (c) more than 10% of a Fund’s total assets would be invested in the aggregate in all investment companies. As a shareholder in an investment company, a Fund would bear its pro-rata portion of the investment company’s expenses, including advisory fees, in addition to its own expenses. Although the 1940 Act restricts investments by registered investment companies in the securities of other investment companies, registered investment companies are permitted to invest in certain ETFs beyond the limits set forth in Section 12(d)(1), subject to certain terms and conditions set forth in a SEC exemptive order issued to such ETFs, including that such investment companies enter into an agreement with such ETF. Set forth below is additional information about the manner in which ETFs generally operate and the risks associated with an investment in ETFs.

In the event that the Fund purchases shares of ETFs, such purchase is expected to be made through a broker-dealer in a transactions on a securities exchange, and in such a case a Fund will pay customary brokerage commissions for each purchase and sale. Shares of an ETF may also be acquired by depositing a specified portfolio of the ETF’s underlying securities, as well as a cash payment generally equal to accumulated dividends of the securities (net of expenses) up to the time of deposit, with the ETF’s custodian, in exchange for which the ETF will issue a quantity of new shares sometimes referred to as a “creation unit.” Similarly, shares of an ETF purchased on an exchange may be accumulated until they represent a creation unit, and the creation unit may be redeemed in kind for a portfolio of the underlying securities (based on the ETF’s NAV) together with a cash payment generally equal to accumulated dividends as of the date of redemption. A Fund may redeem creation units for the underlying securities (and any applicable cash), and may assemble a portfolio of the underlying securities (and any required cash) to purchase creation units, if the Adviser believes it is in a Fund’s interest to do so. A Fund’s ability to redeem creation units may be limited by the 1940 Act, which provides that an ETF will not be obligated to redeem shares held by a Fund in an amount exceeding one percent of such ETF’s total outstanding securities during any period of less than 30 days.

Termination Risk. There is a risk that ETFs in which a Fund invests may terminate due to extraordinary events. For example, any of the service providers to ETFs, such as the trustee or sponsor, may close or otherwise fail to perform their obligations to the ETF, and the ETF may not be able to find a substitute service provider. Also, the ETFs may be dependent upon licenses to use the various indices as a basis for determining their compositions and/or otherwise to use certain trade names. If these licenses are terminated, ETFs may also terminate or experience a disruption in its activities. In addition, an ETF may terminate if its net assets fall below a certain amount.

Although the Adviser believes that, in the event of the termination of an ETF, the Funds will be able to invest instead in shares of an alternate ETF tracking the same market index or another index covering the same general market, there can be no assurance that shares of an alternate ETF would be available for investment at that time.

INVESTMENTS IN COMMODITY/NATURAL RESOURCE-RELATED SECURITIES. As discussed under “Investment Limitations” below, the Funds do not invest directly in commodities. However, the Funds may from time to time invest in securities of companies whose business is related to commodities and natural resources or in registered investment companies or other companies that invest directly or indirectly in commodities and natural resources. For example, a Fund may invest in companies whose business is related to mining of precious or other metals (e.g., gold, silver, etc.) or registered investment companies that invest in securities of mining companies and related instruments (including, without limitation, the underlying commodities). Investments in equity securities of companies involved in mining or related precious metals industries, and the value of the investment companies and other companies that invest in precious metals and other commodities are subject to a number of risks. For example, the prices of precious metals or other commodities can move sharply, up or down, in response to cyclical economic conditions, political events or the monetary policies of various countries, any of which may adversely affect the value of companies whose business is related to such commodities, or the value of investment companies and other companies investing in such business or commodities. Furthermore, such companies are subject to risks related to fluctuations of prices and perceptions of value in the commodity markets generally.

LOAN PARTICIPATIONS. The Fund may purchase participations in commercial loans. Such indebtedness may be secured or unsecured. Loan participations typically represent direct participation in a loan to a corporate borrower and generally are offered by banks or other financial institutions or lending syndicates. The Fund may participate in such syndications, or can buy part of a loan, becoming a part lender. When purchasing loan participations, the Fund assumes the credit risk associated with the corporate borrower and may assume the credit risk associated with an interposed bank or other financial intermediary. The participation interests in which the Fund intends to invest may not be rated by any nationally recognized statistical ratings organization (“NRSRO”).

A loan is often administered by an agent bank acting as agent for all holders. The agent bank administers the terms of the loan, as specified in the loan agreement. In addition, the agent bank is normally responsible for the collection of principal and interest payments from the corporate borrower and the apportionment of these payments to the credit of all institutions which are parties to the loan agreement. Unless, under the terms of the loan or other indebtedness, the Fund has direct recourse against the corporate borrower, the Fund may have to rely on the agent bank or other financial intermediary to apply appropriate credit remedies against a corporate borrower. A financial institution’s employment as agent bank might be terminated in the event that it fails to observe a requisite standard of care or becomes insolvent. A successor agent bank would generally be appointed to replace the terminated agent bank, and assets held by the agent bank under the loan agreement should remain available to holders of such indebtedness. However, if assets held by the agent bank for the benefit of the Fund were determined to be subject to the claims of the agent bank’s general creditors, the Fund might incur certain costs and delays in realizing payment on a loan or loan participation and could suffer a loss of principal and/or interest. In situations involving other interposed financial institutions (e.g., an insurance company or governmental agency) similar risks may arise.

Purchasers of loans and other forms of direct indebtedness depend primarily upon the creditworthiness of the corporate borrower for payment of principal and interest. If the Fund does not receive scheduled interest or principal payments on such indebtedness, the Fund’s share price and yield could be adversely affected. Loans that are fully secured offer the Fund more protection than an unsecured loan in the event of non-payment of scheduled interest or principal. However, there is no assurance that the liquidation of collateral from a secured loan would satisfy the corporate borrower’s obligation, or that the collateral can be liquidated.

The Fund may invest in loan participations with credit quality comparable to that of the issuers of the Fund’s securities investments. Indebtedness of companies whose creditworthiness is poor involves substantially greater risks and may be highly speculative. Some companies may never pay off their indebtedness or may pay only a small fraction of the amount owed. Consequently, when investing in indebtedness of companies with poor credit, the Fund bears a substantial risk of losing the entire amount invested.

The Fund limits the amount of its total assets that it will invest in any one issuer or in issuers within the same industry (see “Investment Limitations”). For purposes of these limits, the Fund generally will treat the corporate borrower as the “issuer” of indebtedness held by the Fund. In the case of loan participations where a bank or other lending institution serves as a financial intermediary between the Fund and the corporate borrower, if the participation does not shift to the Fund the direct debtor-creditor relationship with the corporate borrower, SEC interpretations require the Fund to treat both the lending bank or other lending institution and the corporate borrower as “issuers” for the purpose of determining whether the Fund has invested more than 5% of its assets in a single issuer. Treating a financial intermediary as an issuer of indebtedness may restrict the Fund’s ability to invest in indebtedness related to a single financial intermediary, or a group of intermediaries engaged in the same industry, even if the underlying borrowers represent many different companies and industries.

Loans and other types of direct indebtedness may not be readily marketable and may be subject to restrictions on resale. In some cases, negotiations involved in disposing of indebtedness may require weeks to complete. Consequently, some indebtedness may be difficult or impossible to dispose of readily at what the Adviser believes to be a fair price. In addition, valuation of illiquid indebtedness involves a greater degree of judgment in determining the Fund’s NAV than if that value were based on available market quotations and could result in significant variations in the Fund’s daily share price. At the same time, some loan interests are traded among certain financial institutions and accordingly may be deemed liquid. As the market for different types of indebtedness develops, the liquidity of these instruments is expected to improve. In addition, the Fund currently intends to treat indebtedness for which there is no readily available market as illiquid for purposes of the Fund’s limitation on illiquid investments. Investments in loan participations are considered to be debt obligations for purposes of the Trust’s investment restriction relating to the lending of funds or assets by the Fund.

Investments in loans through a direct assignment of the financial institution's interests with respect to the loan may involve additional risks to the Fund. For example, if a loan is foreclosed, the Fund could become part owner of any collateral and would bear the costs and liabilities associated with owning and disposing of the collateral. In addition, it is conceivable that under emerging legal theories of lender liability, the Fund could be held liable as co-lender. It is unclear whether loans and other forms of direct indebtedness offer securities law protections against fraud and misrepresentation. In the absence of definitive regulatory guidance, the Fund relies on the Adviser's research in an attempt to avoid situations where fraud or misrepresentation could adversely affect the Fund.

MONEY MARKET FUNDS. The Funds may invest in the securities of money market mutual funds. Such investments are subject to limitations prescribed by the 1940 Act, the rules thereunder and applicable SEC staff interpretations thereof, or applicable exemptive relief granted by the SEC. (See "Investment Company Securities and Exchange-Traded Funds" above.)

MORTGAGE-RELATED SECURITIES AND ASSET-BACKED SECURITIES. Mortgage-related securities are interests in pools of residential or commercial mortgage loans, including mortgage loans made by savings and loan institutions, mortgage bankers, commercial banks and others. Pools of mortgage loans are assembled as securities for sale to investors by various governmental, government-related and private organizations. See "Mortgage Pass-Through Securities." The Fund may also invest in debt securities which are secured with collateral consisting of mortgage-related securities (see "Collateralized Mortgage Obligations").

The recent financial downturn—particularly the increase in delinquencies and defaults on residential mortgages, falling home prices, and unemployment—has adversely affected the market for mortgage-related securities. In addition, various market and governmental actions may impair the ability to foreclose on or exercise other remedies against underlying mortgage holders, or may reduce the amount received upon foreclosure. These factors have caused certain mortgage-related securities to experience lower valuations and reduced liquidity. There is also no assurance that the U.S. Government will take further action to support the mortgage-related securities industry, as it has in the past, should the economic downturn continue or the economy experience another downturn. Further, recent legislative action and any future government actions may significantly alter the manner in which the mortgage-related securities market functions. Each of these factors could ultimately increase the risk that the Fund could realize losses on mortgage-related securities.

Mortgage Pass-Through Securities. Interests in pools of mortgage-related securities differ from other forms of debt securities, which normally provide for periodic payment of interest in fixed amounts with principal payments at maturity or specified call dates. Instead, these securities provide a monthly payment which consists of both interest and principal payments. In effect, these payments are a "pass-through" of the monthly payments made by the individual borrowers on their residential or commercial mortgage loans, net of any fees paid to the issuer or guarantor of such securities. Additional payments are caused by repayments of principal resulting from the sale of the underlying property, refinancing or foreclosure, net of fees or costs which may be incurred. Some mortgage-related securities (such as securities issued by GNMA) are described as "modified pass-through." These securities entitle the holder to receive all interest and principal payments owed on the mortgage pool, net of certain fees, at the scheduled payment dates regardless of whether or not the mortgagor actually makes the payment.

The rate of pre-payments on underlying mortgages will affect the price and volatility of a mortgage-related security, and may have the effect of shortening or extending the effective duration of the security relative to what was anticipated at the time of purchase. To the extent that unanticipated rates of pre-payment on underlying mortgages increase the effective duration of a mortgage-related security, the volatility of such security can be expected to increase. The residential mortgage market in the United States recently has experienced difficulties that may adversely affect the performance and market value of certain of the Fund's mortgage-related investments. Delinquencies and losses on residential mortgage loans (especially subprime and second-lien mortgage loans) generally have increased recently and may continue to increase, and a decline in or flattening of housing values (as has recently been experienced and may continue to be experienced in many housing markets) may exacerbate such delinquencies and losses. Borrowers with adjustable rate mortgage loans are more sensitive to changes in interest rates, which affect their monthly mortgage payments, and may be unable to secure replacement mortgages at comparably low interest rates. Also, a number of residential mortgage loan originators have experienced serious financial difficulties or bankruptcy. Owing largely to the foregoing, reduced investor demand for mortgage loans and mortgage-related securities and increased investor yield requirements have caused limited liquidity in the secondary market for certain mortgage-related securities, which can adversely affect the market value of mortgage-related securities. It is possible that such limited liquidity in such secondary markets could continue or worsen.

Agency Mortgage-Related Securities. The principal governmental guarantor of mortgage-related securities is GNMA. GNMA is a wholly owned U.S. Government corporation within the Department of Housing and Urban Development. GNMA is authorized to guarantee, with the full faith and credit of the U.S. Government, the timely payment of principal and interest on securities issued by institutions approved by GNMA (such as savings and loan institutions, commercial banks and mortgage bankers) and backed by pools of mortgages insured by the Federal Housing Administration (the “FHA”), or guaranteed by the Department of Veterans Affairs (the “VA”).

Government-related guarantors (i.e., not backed by the full faith and credit of the U.S. Government) include the Federal National Mortgage Association (“FNMA”) and the Federal Home Loan Mortgage Corporation (“FHLMC”). FNMA is a government-sponsored corporation. FNMA purchases conventional (i.e., not insured or guaranteed by any government agency) residential mortgages from a list of approved seller/servicers which include state and federally chartered savings and loan associations, mutual savings banks, commercial banks and credit unions and mortgage bankers. Pass-through securities issued by FNMA are guaranteed as to timely payment of principal and interest by FNMA, but are not backed by the full faith and credit of the U.S. Government. FHLMC was created by Congress in 1970 for the purpose of increasing the availability of mortgage credit for residential housing. It is a government-sponsored corporation that issues Participation Certificates (“PCs”), which are pass-through securities, each representing an undivided interest in a pool of residential mortgages. FHLMC guarantees the timely payment of interest and ultimate collection of principal, but PCs are not backed by the full faith and credit of the U.S. Government.

On September 6, 2008, the Federal Housing Finance Agency (“FHFA”) placed FNMA and FHLMC into conservatorship. As the conservator, FHFA succeeded to all rights, titles, powers and privileges of FNMA and FHLMC and of any stockholder, officer or director of FNMA and FHLMC with respect to FNMA and FHLMC and the assets of FNMA and FHLMC. FHFA selected a new chief executive officer and chairman of the board of directors for each of FNMA and FHLMC.

In connection with the conservatorship, the U.S. Treasury entered into a Senior Preferred Stock Purchase Agreement with each of FNMA and FHLMC pursuant to which the U.S. Treasury will purchase up to an aggregate of \$100 billion of each of FNMA and FHLMC to maintain a positive net worth in each enterprise. This agreement contains various covenants that severely limit each enterprise’s operations. In exchange for entering into these agreements, the U.S. Treasury received \$1 billion of each enterprise’s senior preferred stock and warrants to purchase 79.9% of each enterprise’s common stock. On February 18, 2009, the U.S. Treasury announced that it was doubling the size of its commitment to each enterprise under the Senior Preferred Stock Program to \$200 billion. The U.S. Treasury’s obligations under the Senior Preferred Stock Program are for an indefinite period of time for a maximum amount of \$200 billion per enterprise.

FNMA and FHLMC are continuing to operate as going concerns while in conservatorship and each remain liable for all of its obligations, including its guaranty obligations, associated with its mortgage-backed securities. The Senior Preferred Stock Purchase Agreement is intended to enhance each of FNMA’s and FHLMC’s ability to meet its obligations. The FHFA has indicated that the conservatorship of each enterprise will end when the director of FHFA determines that FHFA’s plan to restore the enterprise to a safe and solvent condition has been completed.

Under the Federal Housing Finance Regulatory Reform Act of 2008 (the “Reform Act”), which was included as part of the Housing and Economic Recovery Act of 2008, FHFA, as conservator or receiver, has the power to repudiate any contract entered into by FNMA or FHLMC prior to FHFA’s appointment as conservator or receiver, as applicable, if FHFA determines, in its sole discretion, that performance of the contract is burdensome and that repudiation of the contract promotes the orderly administration of FNMA’s or FHLMC’s affairs. The Reform Act requires FHFA to exercise its right to repudiate any contract within a reasonable period of time after its appointment as conservator or receiver.

FHFA, in its capacity as conservator, has indicated that it has no intention to repudiate the guaranty obligations of FNMA or FHLMC because FHFA views repudiation as incompatible with the goals of the conservatorship. However, in the event that FHFA, as conservator or if it is later appointed as receiver for FNMA or FHLMC, were to repudiate any such guaranty obligation, the conservatorship or receivership estate, as applicable, would be liable for actual direct compensatory damages in accordance with the provisions of the Reform Act. Any such liability could be satisfied only to the extent of FNMA's or FHLMC's assets available therefor.

In the event of repudiation, the payments of interest to holders of FNMA or FHLMC mortgage-backed securities would be reduced if payments on the mortgage loans represented in the mortgage loan groups related to such mortgage-backed securities are not made by the borrowers or advanced by the servicer. Any actual direct compensatory damages for repudiating these guaranty obligations may not be sufficient to offset any shortfalls experienced by such mortgage-backed security holders.

Further, in its capacity as conservator or receiver, FHFA has the right to transfer or sell any asset or liability of FNMA or FHLMC without any approval, assignment or consent. Although FHFA has stated that it has no present intention to do so, if FHFA, as conservator or receiver, were to transfer any such guaranty obligation to another party, holders of FNMA or FHLMC mortgage-backed securities would have to rely on that party for satisfaction of the guaranty obligation and would be exposed to the credit risk of that party.

In addition, certain rights provided to holders of mortgage-backed securities issued by FNMA and FHLMC under the operative documents related to such securities may not be enforced against FHFA, or enforcement of such rights may be delayed, during the conservatorship or any future receivership. The operative documents for FNMA and FHLMC mortgage-backed securities may provide (or with respect to securities issued prior to the date of the appointment of the conservator may have provided) that upon the occurrence of an event of default on the part of FNMA or FHLMC, in its capacity as guarantor, which includes the appointment of a conservator or receiver, holders of such mortgage-backed securities have the right to replace FNMA or FHLMC as trustee if the requisite percentage of mortgage-backed securities holders consent. The Reform Act prevents mortgage-backed security holders from enforcing such rights if the event of default arises solely because a conservator or receiver has been appointed. The Reform Act also provides that no person may exercise any right or power to terminate, accelerate or declare an event of default under certain contracts to which FNMA or FHLMC is a party, or obtain possession of or exercise control over any property of FNMA or FHLMC, or affect any contractual rights of FNMA or FHLMC, without the approval of FHFA, as conservator or receiver, for a period of 45 or 90 days following the appointment of FHFA as conservator or receiver, respectively.

In addition, in a February 2011 report to Congress from the Treasury Department and the Department of Housing and Urban Development, the Obama administration provided a plan to reform America's housing finance market. The plan would reduce the role of and eventually eliminate FNMA and FHLMC. Notably, the plan does not propose similar significant changes to GNMA, which guarantees payments on mortgage-related securities backed by federally insured or guaranteed loans such as those issued by the Federal Housing Association or guaranteed by the Department of Veterans Affairs. The report also identified three proposals for Congress and the administration to consider for the long-term structure of the housing finance markets after the elimination of FNMA and FHLMC, including implementing: (i) a privatized system of housing finance that limits government insurance to very limited groups of creditworthy low- and moderate-income borrowers; (ii) a privatized system with a government backstop mechanism that would allow the government to insure a larger share of the housing finance market during a future housing crisis; and (iii) a privatized system where the government would offer reinsurance to holders of certain highly-rated mortgage-related securities insured by private insurers and would pay out under the reinsurance arrangements only if the private mortgage insurers were insolvent.

Privately Issued Mortgage-Related Securities. Commercial banks, savings and loan institutions, private mortgage insurance companies, mortgage bankers and other secondary market issuers also create pass-through pools of conventional residential mortgage loans. Such issuers may be the originators and/or servicers of the underlying mortgage loans as well as the guarantors of the mortgage-related securities. Pools created by such non-governmental issuers generally offer a higher rate of interest than government and government-related pools because there are no direct or indirect government or agency guarantees of payments in the former pools.

However, timely payment of interest and principal of these pools may be supported by various forms of insurance or guarantees, including individual loan, title, pool and hazard insurance and letters of credit, which may be issued by governmental entities or private insurers. Such insurance and guarantees and the creditworthiness of the issuers thereof will be considered in determining whether a mortgage-related security meets the Trust's investment quality standards. There can be no assurance that the private insurers or guarantors can meet their obligations under the insurance policies or guarantee arrangements. The Fund may buy mortgage-related securities without insurance or guarantees if, through an examination of the loan experience and practices of the originators/servicers and poolers, the Adviser determines that the securities meet the Trust's quality standards. Securities issued by certain private organizations may not be readily marketable. The Fund will not purchase mortgage-related securities or any other assets which in the opinion of the Adviser are illiquid if, as a result, more than 15% of the value of the Fund's net assets will be illiquid.

Privately issued mortgage-related securities are not subject to the same underwriting requirements for the underlying mortgages that are applicable to those mortgage-related securities that have a government or government-sponsored entity guarantee. As a result, the mortgage loans underlying privately issued mortgage-related securities may, and frequently do, have less favorable collateral, credit risk or other underwriting characteristics than government or government-sponsored mortgage-related securities and have wider variances in a number of terms including interest rate, term, size, purpose and borrower characteristics. Mortgage pools underlying privately issued mortgage-related securities more frequently include second mortgages, high loan-to-value ratio mortgages and manufactured housing loans, in addition to commercial mortgages and other types of mortgages where a government or government sponsored entity guarantee is not available. The coupon rates and maturities of the underlying mortgage loans in a privately-issued mortgage-related securities pool may vary to a greater extent than those included in a government guaranteed pool, and the pool may include subprime mortgage loans. Subprime loans are loans made to borrowers with weakened credit histories or with a lower capacity to make timely payments on their loans. For these reasons, the loans underlying these securities have had in many cases higher default rates than those loans that meet government underwriting requirements.

The risk of non-payment is greater for mortgage-related securities that are backed by loans that were originated under weak underwriting standards, including loans made to borrowers with limited means to make repayment. A level of risk exists for all loans, although, historically, the poorest performing loans have been those classified as subprime. Other types of privately issued mortgage-related securities, such as those classified as pay-option adjustable rate or Alt-A have also performed poorly. Even loans classified as prime have experienced higher levels of delinquencies and defaults. The substantial decline in real property values across the U.S. has exacerbated the level of losses that investors in privately issued mortgage-related securities have experienced. It is not certain when these trends may reverse. Market factors that may adversely affect mortgage loan repayment include adverse economic conditions, unemployment, a decline in the value of real property, or an increase in interest rates.

Privately issued mortgage-related securities are not traded on an exchange and there may be a limited market for the securities, especially when there is a perceived weakness in the mortgage and real estate market sectors. Without an active trading market, mortgage-related securities held in the Fund's portfolio may be particularly difficult to value because of the complexities involved in assessing the value of the underlying mortgage loans.

The Fund may purchase privately issued mortgage-related securities that are originated, packaged and serviced by third party entities. It is possible these third parties could have interests that are in conflict with the holders of mortgage-related securities, and such holders (such as the Fund) could have rights against the third parties or their affiliates. For example, if a loan originator, servicer or its affiliates engaged in negligence or willful misconduct in carrying out its duties, then a holder of the mortgage-related security could seek recourse against the originator/servicer or its affiliates, as applicable. Also, as a loan originator/servicer, the originator/servicer or its affiliates may make certain representations and warranties regarding the quality of the mortgages and properties underlying a mortgage-related security. If one or more of those representations or warranties is false, then the holders of the mortgage-related securities (such as the Fund) could trigger an obligation of the originator/servicer or its affiliates, as applicable, to repurchase the mortgages from the issuing trust. Notwithstanding the foregoing, many of the third parties that are legally bound by trust and other documents have failed to perform their respective duties, as stipulated in such trust and other documents, and investors have had limited success in enforcing terms.

Mortgage-related securities that are issued or guaranteed by the U.S. Government, its agencies or instrumentalities, are not subject to the Fund's industry concentration restrictions, set forth below under "Investment Limitations," by virtue of the exclusion from that test available to all U.S. Government securities. In the case of privately issued mortgage-related securities, the Fund takes the position that mortgage-related securities do not represent interests in any particular "industry" or group of industries. Therefore, the Fund may invest more or less than 25% of its total assets in privately issued mortgage-related securities. The assets underlying such securities may be represented by a portfolio of residential or commercial mortgages (including both whole mortgage loans and mortgage participation interests that may be senior or junior in terms of priority of repayment) or portfolios of mortgage pass-through securities issued or guaranteed by GNMA, FNMA or FHLMC. Mortgage loans underlying a mortgage-related security may in turn be insured or guaranteed by the FHA or the VA. In the case of privately issued mortgage-related securities whose underlying assets are neither U.S. Government securities nor U.S. Government-insured mortgages, to the extent that real properties securing such assets may be located in the same geographical region, the security may be subject to a greater risk of default than other comparable securities in the event of adverse economic, political or business developments that may affect such region and, ultimately, the ability of residential homeowners to make payments of principal and interest on the underlying mortgages.

Collateralized Mortgage Obligations ("CMOs"). A CMO is a debt obligation of a legal entity that is collateralized by mortgages and divided into classes. Similar to a bond, interest and prepaid principal is paid, in most cases, on a monthly basis. CMOs may be collateralized by whole mortgage loans or private mortgage bonds, but are more typically collateralized by portfolios of mortgage pass-through securities guaranteed by GNMA, FHLMC, or FNMA, and their income streams.

CMOs are structured into multiple classes, often referred to as "tranches," with each class bearing a different stated maturity and entitled to a different schedule for payments of principal and interest, including pre-payments. Actual maturity and average life will depend upon the prepayment experience of the collateral. In the case of certain CMOs (known as "sequential pay" CMOs), payments of principal received from the pool of underlying mortgages, including pre-payments, are applied to the classes of CMOs in the order of their respective final distribution dates. Thus, no payment of principal will be made to any class of sequential pay CMOs until all other classes having an earlier final distribution date have been paid in full.

In a typical CMO transaction, a corporation ("issuer") issues multiple series (*e.g.*, A, B, C, Z) of CMO bonds ("Bonds"). Proceeds of the Bond offering are used to purchase mortgages or mortgage pass-through certificates ("Collateral"). The Collateral is pledged to a third party trustee as security for the Bonds. Principal and interest payments from the Collateral are used to pay principal on the Bonds in the order A, B, C, Z. The Series A, B, and C Bonds all bear current interest. Interest on the Series Z Bond is accrued and added to principal and a like amount is paid as principal on the Series A, B, or C Bond currently being paid off. When the Series A, B, and C Bonds are paid in full, interest and principal on the Series Z Bond begins to be paid currently. CMOs may be less liquid and may exhibit greater price volatility than other types of mortgage-backed or asset-backed securities.

As CMOs have evolved, some classes of CMO bonds have become more common. For example, the Fund may invest in parallel-pay and planned amortization class ("PAC") CMOs and multi-class pass through certificates. Parallel-pay CMOs and multi-class pass-through certificates are structured to provide payments of principal on each payment date to more than one class. These simultaneous payments are taken into account in calculating the stated maturity date or final distribution date of each class, which, as with other CMO and multi-class pass-through structures, must be retired by its stated maturity date or final distribution date but may be retired earlier. PACs generally require payments of a specified amount of principal on each payment date. PACs are parallel-pay CMOs with the required principal amount on such securities having the highest priority after interest has been paid to all classes. Any CMO or multi-class pass through structure that includes PAC securities must also have support tranches—known as support bonds, companion bonds or non-PAC bonds—which lend or absorb principal cash flows to allow the PAC securities to maintain their stated maturities and final distribution dates within a range of actual prepayment experience. These support tranches are subject to a higher level of maturity risk compared to other mortgage-related securities, and usually provide a higher yield to compensate investors. If principal cash flows are received in amounts outside a pre-determined range such that the support bonds cannot lend or absorb sufficient cash flows to the PAC securities as intended, the PAC securities are subject to heightened maturity risk.

Commercial Mortgage-Backed Securities. Commercial mortgage-backed securities include securities that reflect an interest in, and are secured by, mortgage loans on commercial real property. Many of the risks of investing in commercial mortgage-backed securities reflect the risks of investing in the real estate securing the underlying mortgage loans. These risks reflect the effects of local and other economic conditions on real estate markets, the ability of tenants to make loan payments, and the ability of a property to attract and retain tenants. Commercial mortgage-backed securities may be less liquid and exhibit greater price volatility than other types of mortgage- or asset-backed securities.

Other Mortgage-Related Securities. Other mortgage-related securities include securities other than those described above that directly or indirectly represent a participation in, or are secured by and payable from, mortgage loans on real property, including mortgage dollar rolls, CMO residuals or stripped mortgage-backed securities (“SMBS”). Other mortgage-related securities may be equity or debt securities issued by agencies or instrumentalities of the U.S. Government or by private originators of, or investors in, mortgage loans, including savings and loan associations, homebuilders, mortgage banks, commercial banks, investment banks, partnerships, trusts and special purpose entities of the foregoing.

CMO Residuals. CMO residuals are mortgage securities issued by agencies or instrumentalities of the U.S. Government or by private originators of, or investors in, mortgage loans, including savings and loan associations, homebuilders, mortgage banks, commercial banks, investment banks and special purpose entities of the foregoing.

The cash flow generated by the mortgage assets underlying a series of CMOs is applied first to make required payments of principal and interest on the CMOs and second to pay the related administrative expenses and any management fee of the issuer. The residual in a CMO structure generally represents the interest in any excess cash flow remaining after making the foregoing payments. Each payment of such excess cash flow to a holder of the related CMO residual represents income and/or a return of capital. The amount of residual cash flow resulting from a CMO will depend on, among other things, the characteristics of the mortgage assets, the coupon rate of each class of CMO, prevailing interest rates, the amount of administrative expenses and the pre-payment experience on the mortgage assets. In particular, the yield to maturity on CMO residuals is extremely sensitive to pre-payments on the related underlying mortgage assets, in the same manner as an interest-only (“IO”) class of stripped mortgage-backed securities. See “Other Mortgage-Related Securities—Stripped Mortgage-Backed Securities.” In addition, if a series of a CMO includes a class that bears interest at an adjustable rate, the yield to maturity on the related CMO residual will also be extremely sensitive to changes in the level of the index upon which interest rate adjustments are based. As described below with respect to stripped mortgage-backed securities, in certain circumstances the Fund may fail to recoup fully its initial investment in a CMO residual.

CMO residuals are generally purchased and sold by institutional investors through several investment banking firms acting as brokers or dealers. Transactions in CMO residuals are generally completed only after careful review of the characteristics of the securities in question. In addition, CMO residuals may, or pursuant to an exemption therefrom, may not have been registered under the 1933 Act. CMO residuals, whether or not registered under the 1933 Act, may be subject to certain restrictions on transferability, and may be deemed “illiquid” and subject to the Fund’s limitations on investment in illiquid securities.

Adjustable Rate Mortgage-Backed Securities. Adjustable rate mortgage-backed securities (“ARMBSs”) have interest rates that reset at periodic intervals. Acquiring ARMBSs permits the Fund to participate in increases in prevailing current interest rates through periodic adjustments in the coupons of mortgages underlying the pool on which ARMBSs are based. Such ARMBSs generally have higher current yield and lower price fluctuations than is the case with more traditional fixed income debt securities of comparable rating and maturity. In addition, when prepayments of principal are made on the underlying mortgages during periods of rising interest rates, the Fund can reinvest the proceeds of such prepayments at rates higher than those at which they were previously invested. Mortgages underlying most ARMBSs, however, have limits on the allowable annual or lifetime increases that can be made in the interest rate that the mortgagor pays. Therefore, if current interest rates rise above such limits over the period of the limitation, the Fund, when holding an ARMBS, does not benefit from further increases in interest rates. Moreover, when interest rates are in excess of coupon rates (*i.e.*, the rates being paid by mortgagors) of the mortgages, ARMBSs behave more like fixed income securities and less like adjustable rate securities and are subject to the risks associated with fixed income securities. In addition, during periods of rising interest rates, increases in the coupon rate of adjustable rate mortgages generally lag current market interest rates slightly, thereby creating the potential for capital depreciation on such securities.

Stripped Mortgage-Backed Securities. SMBS are derivative multi-class mortgage securities. SMBS may be issued by agencies or instrumentalities of the U.S. Government, or by private originators of, or investors in, mortgage loans, including savings and loan associations, mortgage banks, commercial banks, investment banks and special purpose entities of the foregoing. SMBS are usually structured with two classes that receive different proportions of the interest and principal distributions on a pool of mortgage assets. A common type of SMBS will have one class receiving some of the interest and most of the principal from the mortgage assets, while the other class will receive most of the interest and the remainder of the principal. In the most extreme case, one class will receive all of the interest (the “IO” class), while the other class will receive all of the principal (the principal-only or “PO” class). The yield to maturity on an IO class is extremely sensitive to the rate of principal payments (including pre-payments) on the related underlying mortgage assets, and a rapid rate of principal payments may have a material adverse effect on the Fund’s yield to maturity from these securities. If the underlying mortgage assets experience greater than anticipated pre-payments of principal, the Fund may fail to recoup some or all of its initial investment in these securities even if the security is in one of the highest rating categories.

Collateralized Debt Obligations. The Fund may invest in collateralized debt obligations (“CDOs”), which include collateralized bond obligations (“CBOs”), collateralized loan obligations (“CLOs”) and other similarly structured securities. CBOs and CLOs are types of asset-backed securities. A CBO is a trust which is often backed by a diversified pool of high risk, below investment grade fixed income securities. The collateral can be from many different types of fixed income securities such as high yield debt, residential privately issued mortgage-related securities, commercial privately issued mortgage-related securities, trust preferred securities and emerging market debt. A CLO is a trust typically collateralized by a pool of loans, which may include, among others, domestic and foreign senior secured loans, senior unsecured loans, and subordinate corporate loans, including loans that may be rated below investment grade or equivalent unrated loans. CDOs may charge management fees and administrative expenses.

For both CBOs and CLOs, the cash flows from the trust are split into two or more portions, called tranches, varying in risk and yield. The riskiest portion is the “equity” tranche which bears the bulk of defaults from the bonds or loans in the trust and serves to protect the other, more senior tranches from default in all but the most severe circumstances. Since they are partially protected from defaults, senior tranches from a CBO trust or CLO trust typically have higher ratings and lower yields than their underlying securities, and can be rated investment grade. Despite the protection from the equity tranche, CBO or CLO tranches can experience substantial losses due to actual defaults, increased sensitivity to defaults due to collateral default and disappearance of protecting tranches, market anticipation of defaults, as well as aversion to CBO or CLO securities as a class.

The risks of an investment in a CDO depend largely on the type of the collateral securities and the class of the CDO in which the Fund invests. Normally, CBOs, CLOs and other CDOs are privately offered and sold, and thus, are not registered under the securities laws. As a result, investments in CDOs may be characterized by the Fund as illiquid securities, however an active dealer market may exist for CDOs allowing a CDO to qualify for Rule 144A transactions. In addition to the normal risks associated with fixed income securities discussed elsewhere in this SAI and the Fund’s Prospectus (e.g., interest rate risk and default risk), CDOs carry additional risks including, but are not limited to: (i) the possibility that distributions from collateral securities will not be adequate to make interest or other payments; (ii) the quality of the collateral may decline in value or default; (iii) the Fund may invest in CDOs that are subordinate to other classes; and (iv) the complex structure of the security may not be fully understood at the time of investment and may produce disputes with the issuer or unexpected investment results.

Asset-Backed Securities. Asset-backed securities (“ABS”) are bonds backed by pools of loans or other receivables. ABS are created from many types of assets, including auto loans, credit card receivables, home equity loans, and student loans. ABS are issued through special purpose vehicles that are bankruptcy remote from the issuer of the collateral. The credit quality of an ABS transaction depends on the performance of the underlying assets. To protect ABS investors from the possibility that some borrowers could miss payments or even default on their loans, ABS include various forms of credit enhancement. Some ABS, particularly home equity loan transactions, are subject to interest-rate risk and prepayment risk. A change in interest rates can affect the pace of payments on the underlying loans, which in turn, affects total return on the securities. ABS also carry credit or default risk. If many borrowers on the underlying loans default, losses could exceed the credit enhancement level and result in losses to investors in an ABS transaction. Finally, ABS have structure risk due to a unique characteristic known as early amortization, or early payout, risk. Built into the structure of most ABS are triggers for early payout, designed to protect investors from losses. These triggers are unique to each transaction and can include: a big rise in defaults on the underlying loans, a sharp drop in the credit enhancement level, or even the bankruptcy of the originator. Once early amortization begins, all incoming loan payments (after expenses are paid) are used to pay investors as quickly as possible based upon a predetermined priority of payment.

Consistent with its investment objectives and policies, the Fund also may invest in other types of asset-backed securities.

BELOW-INVESTMENT GRADE SECURITIES. Subject to the limitations set forth in the Prospectus, the Fund may invest in “below-investment grade” or “high yield” fixed income securities commonly known to investors as “high yield bonds” or “junk bonds.” High yield bonds are issued by a company whose credit rating (based on an NRSRO) evaluation of the likelihood of repayment) necessitates offering a higher coupon and yield on its issues when selling them to investors who may otherwise be hesitant in purchasing the debt of such a company. While generally providing greater income and opportunity for gain, below-investment grade debt securities are generally subject to greater risks than fixed income securities which have higher credit ratings, including a higher risk of default and their yields will fluctuate over time. High yield bonds generally will be in the lower rating categories of NRSROs (rated “Ba” or lower by Moody’s or “BB” or lower by S&P and Fitch or will be unrated). The credit rating of a high yield bond does not necessarily address its market value risk, and ratings may from time to time change, positively or negatively, to reflect developments regarding the issuer’s financial condition. High yield bonds are considered to be speculative with respect to the capacity of the issuer to timely repay principal and pay interest or dividends in accordance with the terms of the obligation and may have more credit risk than higher rated securities.

While the market values of high yield bonds tend to react less to fluctuations in interest rates than do those of higher rated securities, the values of high yield bonds often reflect individual corporate developments and have a high sensitivity to economic changes to a greater extent than do higher rated securities. Issuers of high yield bonds are often in the growth stage of their development and/or involved in a reorganization or takeover. The companies are often highly leveraged (have a significant amount of debt relative to shareholders’ equity) and may not have available to them more traditional financing methods, thereby increasing the risk associated with acquiring these types of securities. In some cases, obligations with respect to high yield bonds are subordinated to the prior repayment of senior indebtedness, which will potentially limit the Fund’s ability to fully recover principal or to receive interest payments when senior securities are in default. Thus, investors in high yield bonds have a lower degree of protection with respect to principal and interest payments than do investors in higher rated securities.

During an economic downturn, a substantial period of rising interest rates or a recession, highly leveraged issuers of high yield bonds may experience financial distress possibly resulting in insufficient revenues to meet their principal and interest payment obligations, to meet projected business goals and to obtain additional financing. An economic downturn could also disrupt the market for lower-rated securities and adversely affect the value of outstanding securities, the Fund’s NAV and the ability of the issuers to repay principal and interest. If the issuer of a security held by the Fund has defaulted, the Fund may not receive full interest and principal payments due to it and could incur additional expenses if it chose to seek recovery of its investment.

The secondary markets for high yield bonds are not as liquid as the secondary markets for higher rated securities. The secondary markets for high yield bonds are concentrated in relatively few market makers and participants in the markets are mostly institutional investors, including insurance companies, banks, other financial institutions and mutual funds. In addition, the trading volume for high yield bonds is generally lower than that for higher rated securities and the secondary markets could contract under adverse market or economic conditions independent of any specific adverse changes in the condition of a particular issuer. Under certain economic and/or market conditions, the Fund may have difficulty disposing of certain high yield bonds due to the limited number of investors in that sector of the market. An illiquid secondary market may adversely affect the market price of the high yield security, which may result in increased difficulty selling the particular issue and obtaining accurate market quotations on the issue when valuing the Fund’s assets. Market quotations on high yield bonds are available only from a limited number of dealers, and such quotations may not be the actual prices available for a purchase or sale.

The high yield markets may react strongly to adverse news about an issuer or the economy, or to the perception or expectation of adverse news, whether or not it is based on fundamental analysis. Additionally, prices for high yield bonds may be affected by legislative and regulatory developments. These developments could adversely affect the Fund's NAV and investment practices, the secondary market for high yield bonds, the financial condition of issuers of these securities and the value and liquidity of outstanding high yield bonds, especially in a thinly traded market. For example, Federal legislation requiring the divestiture by federally insured savings and loan associations of their investments in high yield bonds and limiting the deductibility of interest by certain corporate issuers of high yield bonds adversely affected the market in the past.

When the secondary market for high yield bonds becomes more illiquid, or in the absence of readily available market quotations for such securities, the relative lack of reliable objective data makes it more difficult to value the Fund's securities and judgment plays a more important role in determining such valuations. Increased illiquidity in the junk bond market, in combination with the relative youth and growth of the market for such securities, also may affect the ability of the Fund to dispose of such securities at a desirable price. Additionally, if the secondary markets for high yield bonds contract due to adverse economic conditions or for other reasons, some of the Fund's liquid securities may become illiquid and the proportion of the Fund's assets invested in illiquid securities may significantly increase.

The rating assigned by a rating agency evaluates the safety of a below-investment grade security's principal and interest payments but does not address market value risk. Because such ratings of NRSROs may not always reflect current conditions and events, in addition to using NRSROs and other sources, the Adviser performs its own analysis of the issuers whose below-investment grade securities are held by the Fund. Because of this, the Fund's performance may depend more on the Adviser's own credit analysis than in the case of mutual funds investing in higher-rated securities. For a description of these ratings, see "Appendix A - Description of Securities Ratings."

In selecting below-investment grade securities, the Adviser considers factors such as those relating to the creditworthiness of issuers, the ratings and performance of the securities, the protections afforded the securities and the diversity of the Fund. The Adviser continuously monitors the issuers of below-investment grade securities held by the Fund for their ability to make required principal and interest payments, as well as in an effort to control the liquidity of the Fund so that it can meet redemption requests. If a security's rating is reduced below the minimum credit rating that is permitted for the Fund, the Adviser will consider whether the Fund should continue to hold the security.

In the event that the Fund investing in high yield bonds experiences an unexpected level of net redemptions, the Fund could be forced to sell its holdings without regard to the investment merits, thereby decreasing the assets upon which the Fund's rate of return is based.

The costs attributable to investing in the high yield markets are usually higher for several reasons, such as higher investment research costs and higher commission costs.

PARTICIPATION INTERESTS. The Fund may invest in participation interests in fixed income securities. A participation interest provides the certificate holder with a specified interest in an issue of fixed income securities.

Some participation interests give the holders differing interests in the underlying securities, depending upon the type or class of certificate purchased. For example, coupon strip certificates give the holder the right to receive a specific portion of interest payments on the underlying securities; principal strip certificates give the holder the right to receive principal payments and the portion of interest not payable to coupon strip certificate holders. Holders of certificates of participation in interest payments may be entitled to receive a fixed rate of interest, a variable rate that is periodically reset to reflect the current market rate or an auction rate that is periodically reset at auction. Asset-backed residuals represent interests in any excess cash flow remaining after required payments of principal and interest have been made.

More complex participation interests involve special risk considerations. Since these instruments have only recently been developed, there can be no assurance that any market will develop or be maintained for the instruments. Generally, the fixed income securities that are deposited in trust for the holders of these interests are the sole source of payments on the interests; holders cannot look to the sponsor or trustee of the trust or to the issuers of the securities held in trust or to any of their affiliates for payment.

Participation interests purchased at a discount may experience price volatility. Certain types of interests are sensitive to fluctuations in market interest rates and to prepayments on the underlying securities. A rapid rate of prepayment can result in the failure to recover the holder's initial investment.

The extent to which the yield to maturity of a participation interest is sensitive to prepayments depends, in part, upon whether the interest was purchased at a discount or premium, and if so, the size of that discount or premium. Generally, if a participation interest is purchased at a premium and principal distributions occur at a rate faster than that anticipated at the time of purchase, the holder's actual yield to maturity will be lower than that assumed at the time of purchase. Conversely, if a participation interest is purchased at a discount and principal distributions occur at a rate faster than that assumed at the time of purchase, the investor's actual yield to maturity will be higher than that assumed at the time of purchase.

Participation interests in pools of fixed income securities backed by certain types of debt obligations involve special risk considerations. The issuers of securities backed by automobile and truck receivables typically file financing statements evidencing security interests in the receivables, and the servicers of those obligations take and retain custody of the obligations. If the servicers, in contravention of their duty to the holders of the securities backed by the receivables, were to sell the obligations, the third party purchasers could acquire an interest superior to the interest of the security holders. Also, most states require that a security interest in a vehicle must be noted on the certificate of title and the certificate of title may not be amended to reflect the assignment of the lender's security interest. Therefore, the recovery of the collateral in some cases may not be available to support payments on the securities. Securities backed by credit card receivables are generally unsecured, and both Federal and state consumer protection laws may allow set-offs against certain amounts owed.

PREFERRED STOCK. Each Fund may invest in preferred stocks. Preferred stock has a preference over common stock in liquidation (and generally dividends as well) but is subordinated to the liabilities of the issuer in all respects. As a general rule, the market value of preferred stock with a fixed dividend rate and no conversion element varies inversely with interest rates and perceived credit risk, while the market price of convertible preferred stock generally also reflects some element of conversion value. Because preferred stock is junior to debt securities and other obligations of the issuer, deterioration in the credit quality of the issuer will cause greater changes in the value of a preferred stock than in a more senior debt security with similar stated yield characteristics. Unlike interest payments on debt securities, preferred stock dividends are payable only if declared by the issuer's board of directors. Preferred stock also may be subject to optional or mandatory redemption provisions.

REAL ESTATE SECURITIES AND RELATED DERIVATIVES. The Funds may gain exposure to the real estate sector by investing in real estate-linked derivatives, real estate investment trusts ("REITs") and common, preferred and convertible securities of issuers in real estate-related industries. Each of these types of investments are subject to risks similar to those associated with direct ownership of real estate, including loss to casualty or condemnation, increases in property taxes and operating expenses, zoning law amendments, changes in interest rates, overbuilding and increased competition, variations in market value and possible environmental liabilities. A Fund may also invest in rights or warrants to purchase income-producing common and preferred shares of issuers in real estate-related industries.

It is anticipated that substantially all of the equity securities of issuers in real estate-related industries in which the Funds intend to invest will be traded on a national securities exchange or in the over-the-counter market.

REITs are pooled investment vehicles that own and typically operate income-producing real estate. If a REIT meets certain requirements, including distributing to shareholders substantially all of its taxable income (other than net capital gains), then it is not taxed on the income distributed to shareholders. REITs are subject to management fees and other expenses, and so the Funds, when investing in REITs, will bear their proportionate share of the costs of the REITs' operations.

There are three general categories of REITs: Equity REITs, Mortgage REITs and Hybrid REITs. Equity REITs invest primarily in direct fee ownership or leasehold ownership of real property; they derive most of their income from rents. Mortgage REITs invest mostly in mortgages on real estate, which may secure construction, development or long-term loans, and the main source of their income is mortgage interest payments. Hybrid REITs hold both ownership and mortgage interests in real estate.

Along with the risks common to different types of real estate-related securities, REITs, no matter the type, involve additional risk factors. These include poor performance by the REIT's manager, changes to the tax laws, and failure by the REIT to qualify for tax-free distribution of income or exemption under the 1940 Act. Furthermore, REITs are not diversified and are heavily dependent on cash flow.

REPURCHASE AGREEMENTS. Each Fund may invest in repurchase agreements. A repurchase agreement is a transaction in which a Fund purchases a security from a bank or recognized securities dealer and simultaneously commits to resell that security to a bank or dealer at an agreed upon date and price reflecting a market rate of interest, unrelated to the coupon rate or the maturity of the purchased security. While it is not possible to eliminate all risks from these transactions (particularly the possibility of a decline in the market value of the underlying securities, as well as delays and costs to a Fund if the other party to the repurchase agreement defaults), it is the policy of each Fund to limit repurchase transactions to primary dealers and banks whose creditworthiness has been reviewed and found satisfactory by the Adviser. Repurchase agreements maturing in more than seven days are considered illiquid for purposes of a Fund's investment limitations. REITs can be listed and traded on national securities exchanges or can be traded privately between individual owners.

RESTRICTED SECURITIES. Restricted securities are securities that may not be sold to the public without registration under the 1933 Act or an exemption from registration. Each Fund is subject to an investment limitation on the purchase of illiquid securities. Restricted securities, including securities eligible for resale pursuant to Rule 144A under the 1933 Act, that are determined to be liquid are not subject to this limitation. This determination is to be made by the Adviser pursuant to guidelines adopted by the Board of Trustees. Under these guidelines, the Adviser will consider the frequency of trades and quotes for the security, the number of dealers in, and potential purchasers for, the securities, dealer undertakings to make a market in the security and the nature of the security and of the marketplace trades. In purchasing such restricted securities, the Adviser intends to purchase securities that are exempt from registration under Rule 144A.

REVERSE REPURCHASE AGREEMENTS. A Fund may enter into reverse repurchase agreements in accordance with its investment restrictions. Pursuant to such agreements, a Fund would sell portfolio securities to financial institutions such as banks and broker-dealers, and agree to repurchase them at a mutually agreed-upon date and price. At the time a Fund enters into a reverse repurchase agreement, it will place in a segregated custodial account assets such as U.S. Government securities or other liquid, high grade debt securities, generally rated in one of the three highest ratings categories, consistent with the Fund's investment restrictions having a value at least equal to the repurchase price (including accrued interest) and will subsequently monitor the account to ensure that such equivalent value is maintained. Reverse repurchase agreements involve the risk that the market value of the securities sold by a Fund may decline below the price at which it is obligated to repurchase the securities.

Reverse repurchase agreements are considered to be borrowings by a Fund under the 1940 Act. A Fund will not engage in reverse repurchase transactions if such transactions, combined with any other borrowings, exceed 33-1/3% of the Fund's assets.

SECURITIES LENDING. The Emerging Markets Fund does not currently intend to engage in securities lending but may do so upon approval of the Board of Trustees and notice to shareholders. For the purpose of achieving income, each Fund may lend its portfolio securities to brokers, dealers and other financial institutions, provided: (i) the loan is secured continuously by collateral consisting of U.S. Government securities, cash or cash equivalents (negotiable certificates of deposits, bankers' acceptances or letters of credit) maintained on a daily mark-to-market basis in an amount at least equal to the current market value of the securities loaned; (ii) a Fund may at any time call the loan and obtain the return of the securities loaned; (iii) the Fund will receive any interest or dividends paid on the loaned securities; and (iv) the aggregate market value of securities loaned will not at any time exceed 33 1/3% of the total assets of a Fund. A Fund's performance will continue to reflect the receipt of either interest through investment of cash collateral by such Fund in permissible investments, or a fee, if the collateral is U.S. Government securities. Securities lending involves the risk of loss of rights in the collateral or delay in recovery of the collateral should the borrower fail to return the securities loaned or become insolvent. The Funds may pay lending fees to the party arranging the loan.

SHORT SALES. The Funds may make short sales of securities as part of their overall portfolio management strategies involving the use of derivative instruments, to gain exposure to or adjust exposure to various market sectors, to offset potential declines in long positions in similar securities or otherwise take advantage of market conditions. A short sale is a transaction in which a Fund sells a security it does not own in anticipation that the market price of that security will decline.

When a Fund makes a short sale, it must borrow the security sold short and deliver it to the broker-dealer through which it made the short sale as collateral for its obligation to deliver the security upon conclusion of the sale. A Fund may have to pay a fee to borrow particular securities and is often obligated to pay over any accrued interest and dividends on such borrowed securities.

If the price of the security sold short increases between the time of the short sale and the time that a Fund replaces the borrowed security, the Fund will incur a loss; conversely, if the price declines, the Fund will realize a gain. Any gain will be decreased, and any loss increased, by the transaction costs described above. The successful use of short selling may be adversely affected by imperfect correlation between movements in the price of the security sold short and the securities being hedged.

To the extent that a Fund engages in short sales, it will provide collateral to the broker-dealer and (except in the case of short sales “against the box”) will maintain additional asset coverage in the form of segregated or “earmarked” assets determined to be liquid by the Adviser in accordance with procedures established by the Board of Trustees. Each Fund does not intend to enter into short sales (other than those “against the box”) if immediately after such sale the aggregate of the value of all collateral plus the amount of the segregated or “earmarked” assets exceeds one-third of the value of the Fund’s assets. This percentage may be varied by action of the Trustees. A short sale is “against the box” to the extent that the Fund contemporaneously owns, or has the right to obtain at no added cost, securities identical to those sold short. The Funds will engage in short selling to the extent permitted by the 1940 Act and rules and interpretations thereunder.

U.S. GOVERNMENT OBLIGATIONS. Each Fund may invest in debt securities issued or guaranteed by the U.S. Government, its agencies or instrumentalities. Although all obligations of such agencies and instrumentalities are not direct obligations of the U.S. Treasury, the U.S. Government generally directly or indirectly backs payment of the interest and principal on these obligations. This support can range from securities supported by the full faith and credit of the United States (for example, GNMA securities) to securities that are supported solely or primarily by the creditworthiness of the issuer, such as securities of the FNMA, the FHLMC, the Tennessee Valley Authority, Federal Farm Credit Banks and Federal Home Loan Banks. In the case of obligations not backed by the full faith and credit of the United States, a Fund must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment and may not be able to assert a claim against the United States itself in the event the agency or instrumentality does not meet its commitments. Whether backed by full faith and credit of the U.S. Treasury or not, U.S. Government obligations are not guaranteed against price movements due to fluctuating interest rates.

VARIABLE AND FLOATING RATE SECURITIES. Variable and floating rate securities provide for a periodic adjustment in the interest rate paid on the obligations. The terms of such obligations must provide that interest rates are adjusted periodically based upon an interest rate adjustment index as provided in the respective obligations. The adjustment intervals may be regular, and range from daily up to annually, or may be event based, such as based on a change in the prime rate.

The Funds may invest in floating rate debt instruments (“floaters”) and engage in credit spread trades. The interest rate on a floater is a variable rate which is tied to another interest rate, such as a money-market index or Treasury bill rate. The interest rate on a floater resets periodically, typically every six months. While, because of the interest rate reset feature, floaters provide a Fund with a certain degree of protection against rises in interest rates, a Fund will participate in any declines in interest rates as well. A credit spread trade is an investment position relating to a difference in the prices or interest rates of two securities or currencies, where the value of the investment position is determined by movements in the difference between the prices or interest rates, as the case may be, of the respective securities or currencies.

Each Fund may also invest in inverse floating rate debt instruments (“inverse floaters”). The interest rate on an inverse floater resets in the opposite direction from the market rate of interest to which the inverse floater is indexed. An inverse floating rate security may exhibit greater price volatility than a fixed rate obligation of similar credit quality. See “Mortgage-Related and Other Asset-Backed Securities” for a discussion of IOs and POs.

RIGHTS OFFERINGS AND WARRANTS TO PURCHASE SECURITIES. The Funds may participate in rights offerings and may purchase warrants, which are privileges issued by corporations enabling the owners to subscribe to and purchase a specified number of shares of the corporation at a specified price during a specified period of time. Subscription rights normally have a short life span to expiration. The purchase of rights or warrants involves the risk that a Fund could lose the purchase value of a right or warrant if the right to subscribe to additional shares is not exercised prior to the rights’ and warrants’ expiration. Also, the purchase of rights and/or warrants involves the risk that the effective price paid for the right and/or warrant added to the subscription price of the related security may exceed the value of the subscribed security’s market price such as when there is no movement in the level of the underlying security. Buying a warrant does not make a Fund a shareholder of the underlying stock. The warrant holder has no voting or dividend rights with respect to the underlying stock. A warrant does not carry any right to assets of the issuer, and for this reason investment in warrants may be more speculative than other equity-based investments.

WHEN-ISSUED, DELAYED DELIVERY AND FORWARD COMMITMENT TRANSACTIONS. Each of the Funds may purchase or sell securities on a when-issued, delayed delivery or forward commitment basis. When such purchases are outstanding, a Fund will segregate or “ earmark ” until the settlement date assets determined to be liquid by the Adviser in accordance with procedures established by the Board of Trustees, in an amount sufficient to meet the purchase price. Typically, no income accrues on securities a Fund has committed to purchase prior to the time delivery of the securities is made, although a Fund may earn income on securities it has segregated or “ earmarked .”

When purchasing a security on a when-issued, delayed delivery or forward commitment basis, a Fund assumes the rights and risks of ownership of the security, including the risk of price and yield fluctuations, and takes such fluctuations into account when determining its NAV. Because a Fund is not required to pay for the security until the delivery date, these risks are in addition to the risks associated with the Fund’s other investments. If a Fund remains substantially fully invested at a time when when-issued, delayed delivery or forward commitment purchases are outstanding, the purchases may result in a form of leverage.

When a Fund has sold a security on a when-issued, delayed delivery, or forward commitment basis, the Fund does not participate in future gains or losses with respect to the security. If the other party to a transaction fails to deliver or pay for the securities, a Fund could miss a favorable price or yield opportunity or could suffer a loss. A Fund may dispose of or renegotiate a transaction after it is entered into, and may sell when-issued, delayed delivery or forward commitment securities before they are delivered, which may result in a capital gain or loss. There is no percentage limitation on the extent to which the Funds may purchase or sell securities on a when-issued, delayed delivery or forward commitment basis.

ZERO COUPON BONDS. Each Fund may invest in zero coupon bonds of governmental or private issuers that generally pay no interest to their holders prior to maturity. Since zero coupon bonds do not make regular interest payments, they allow an issuer to avoid the need to generate cash to meet current interest payments and may involve greater credit risks than bonds paying interest currently. The IRC requires that a Fund accrue income on zero coupon bonds for each taxable year, even though no cash has been paid on the bonds, and generally requires such Fund to distribute such income (net of deductible expenses, if any) to avoid being subject to tax and to continue to maintain its status as a RIC under the IRC. Because no cash is generally received at the time of accrual, a Fund may be required to sell investments (even if such sales are not advantageous) to obtain sufficient cash to satisfy the federal tax distribution requirements applicable to such Fund under the IRC. See “Certain Material U.S. Federal Income Tax Considerations” below for additional information.

TEMPORARY DEFENSIVE POSITIONS. Each Fund may, without limit, invest in U.S. Government securities, commercial paper and other money market instruments, money market funds, cash or cash equivalents in response to adverse market conditions, as a temporary defensive position. The result of this action may be that a Fund will be unable to achieve its investment objective.

PORTFOLIO TURNOVER. There has not been any significant variation in the Funds' portfolio turnover rates over the two most recently completed fiscal years. The Adviser does not anticipate significant variation in the portfolio turnover rate from that reported in the Funds' Prospectus for the last fiscal year. However, the annual portfolio turnover rate may be significantly higher during periods that the Adviser believes present more attractive investment opportunities.

DISCLOSURE OF PORTFOLIO HOLDINGS

As required by the federal or state securities laws, including the 1940 Act, the Funds disclose portfolio holdings in applicable regulatory filings, including shareholder reports, reports on Form N-CSR, Form N-Q or such other filings, reports or disclosure documents as the applicable regulatory authorities may require.

The Board of Trustees has adopted policies and procedures regarding the selective disclosure of portfolio securities holdings. The policies and procedures are designed to allow disclosure of a Fund's holdings information where it is deemed appropriate for a Fund's operations or it is determined to be useful to a Fund's shareholders without compromising the integrity or performance of a Fund. Except when there are legitimate business purposes for selective disclosure of a Fund's holdings, a Fund will not provide or permit others to provide information about the Fund's holdings on a selective basis. The Board of Trustees provides ongoing oversight of the Trust's policies and procedures and compliance with such policies and procedures. As part of this oversight function, the Trustees receive from the Trust's Chief Compliance Officer ("CCO") as necessary, reports on compliance with these policies and procedures. In addition, the Trustees receive an annual assessment of the adequacy and effect of the policies and procedures with respect to the Funds, and any changes thereto, and an annual review of the operation of the policies and procedures. Any deviation to this policy as well as any corrective action undertaken to address such deviations must be reported to the Trust's Board of Trustees (the "Board"), at its next quarterly Board meeting or sooner, as determined by the Trust's CCO.

Each Fund may, but is not required to, post its schedule of investments on its website at regular intervals or from time to time at the discretion of the Adviser. This information may be as of the most recent practicable date available and need not be subject to a lag period prior to its posting on the website. In addition to their schedule of investments, each Fund may post portfolio holdings information and other information on a website including, but not limited to, information about the number of securities a Fund holds, a summary schedule of investments, a Fund's top holdings, and a percentage breakdown of a Fund's investments by geographic region, sector, industry and market capitalization. After any portfolio holdings information becomes publicly available (by posting on the website or otherwise); it may be mailed, e-mailed or otherwise transmitted to any person.

The following disclosures of aggregate, composite or descriptive information about a Fund or its portfolio holdings are not subject to the Trust's policy on selective disclosure of portfolio information: (i) descriptions of allocations among classes, geographic regions, countries, industries or sectors; (ii) aggregated data such as average or median ratios or market capitalization; (iii) performance attribution by class, geographic region, country, industry or sector; (iv) aggregated risk statistics; (v) listing of top holdings without any reference to the amount of a Fund's holdings; and (vi) such other information that, in the opinion of the CCO or designee, does not present material risks of dilution, arbitrage, market timing, insider trading or other inappropriate trading of a Fund. Each Fund's portfolio holdings may also be disclosed, upon authorization by a designated officer of the Adviser, to financial consultants to assist them in determining the suitability of the Fund as an investment for their clients, in each case in accordance with the anti-fraud provisions of the federal securities laws and the Adviser's fiduciary duties to Fund shareholders.

Disclosures to financial consultants are also subject to a confidentiality agreement and/or trading restrictions.

The Board of Trustees of the Trust, a committee thereof, or an officer designated by the Board, may, in limited circumstances, permit other selective disclosure of portfolio holdings subject to a confidentiality agreement and/or trading restrictions.

The Funds may distribute or authorize the distribution of information about their holdings that is not publicly available (on a website or otherwise) to the Funds' or the Adviser's employees and affiliates that provide services to the Funds. The Funds may also distribute or authorize the distribution of information about the Funds' holdings that is not publicly available (on a website or otherwise) to the Funds' service providers who require access to the information (i) in order to fulfill their contractual duties relating to the Funds; (ii) to facilitate the transition of a newly hired investment adviser or sub-adviser prior to the commencement of its duties; (iii) to facilitate the review of the Funds by a ranking or ratings agency; (iv) for the purpose of due diligence regarding a merger or acquisition; or (v) for the purpose of effecting in-kind redemption of securities to facilitate orderly redemption of a Fund's assets and minimize impact on remaining shareholders of a Fund.

Each of the following third parties has been approved to receive portfolio holdings information: (i) the Funds' administrator and accounting agent; (ii) the Funds' independent registered public accounting firm, for use in providing audit opinions; (iii) financial printers, solely for the purpose of preparing the Funds' reports or regulatory filings; (iv) the Funds' custodian in connection with its custody of the Funds' assets; (v) if applicable, a proxy voting service; or (vi) disclosure to a ranking or rating agency, such as Lipper, Inc., Morningstar, Inc., Moody's, S&P and Fitch Ratings, Inc. ("Fitch"). Information may be provided to these parties at any time so long as each of these parties is contractually and ethically prohibited from sharing a Fund's portfolio holding information without specific authorization. The Funds' Adviser and service providers have also established procedures to ensure that the Funds' portfolio holdings information is only disclosed in accordance with these policies.

Under no circumstances may a Fund, the Adviser or their affiliates receive any consideration or compensation for disclosing portfolio holdings information.

INVESTMENT LIMITATIONS

The Funds have adopted the investment limitations set forth below. Except with respect to the asset coverage requirement under Section 18(f)(1) of the 1940 Act with respect to borrowing, if any percentage restriction on investment or utilization of assets is adhered to at the time an investment is made, a later change in percentage resulting from a change in the market values of the Funds or their assets or redemptions of shares will not be considered a violation of the limitation. The asset coverage requirement under Section 18(f)(1) of the 1940 Act with respect to borrowings is an ongoing requirement. The following non-fundamental policies apply to the Funds and the Board of Trustees may change them without shareholder approval unless shareholder approval is required by the 1940 Act or the rules and regulations thereunder. The Funds will not:

1. Except with respect to the Emerging Markets Debt Fund, purchase securities of any one issuer if, as a result, more than 5% of the Emerging Markets Fund's total assets would be invested in securities of that issuer or the Fund would own more than 10% of the outstanding voting securities of that issuer, except that (a) up to 25% of the Fund's total assets may be invested without regard to this limitation; and (b) this limitation does not apply to securities issued or guaranteed by the U.S. Government, its agencies and instrumentalities ("U.S. Government obligations") or to securities issued by other investment companies. Repurchase agreements fully collateralized by U.S. Government obligations will be treated as U.S. Government obligations;
2. Invest 25% or more of the value of a Fund's assets in securities of issuers in any one industry. This restriction does not apply to obligations issued or guaranteed by the U.S. Government, its agencies or instrumentalities or to securities issued by other investment companies. For purposes of this limitation each non-U.S. country's government (together with their municipalities and political subdivisions thereof) will be considered to be a separate industry;
3. Issue senior securities or borrow money, except as permitted under the 1940 Act and the rules and regulations thereunder, and then not in excess of 33-1/3% of a Fund's total assets (including the amount of the senior securities issued but reduced by any liabilities not constituting senior securities) at the time of the issuance or borrowing, except that the Fund may borrow up to an additional 5% of its total assets (not including the amount borrowed) for temporary purposes such as clearance of portfolio transactions and share redemptions. For purposes of these restrictions, the purchase or sale of securities on a when-issued, delayed delivery or forward commitment basis, the purchase and sale of options and futures contracts and collateral arrangements with respect thereto are not deemed to be the issuance of a senior security, a borrowing or a pledge of assets;

4. Underwrite any issue of securities, except to the extent that the Funds may be considered to be acting as underwriter in connection with the disposition of any portfolio security;
5. Purchase or sell real estate, except that the Funds may (i) invest in securities of issuers that invest in real estate or interests therein, (ii) invest in mortgage-related securities and other securities that are secured by real estate or interests therein, and (iii) hold and sell real estate acquired by the Funds as a result of the ownership of securities;
6. Purchase or sell commodities, unless acquired as a result of owning securities or other instruments, but the Funds may purchase, sell or enter into financial options and futures, forward and spot currency contracts, swap transactions and other financial contracts or derivative instruments;
7. Make loans, except to the extent permitted under the 1940 Act, the rules and regulations thereunder or any exemption therefrom, as such statute, rules or regulations may be amended or interpreted from time to time. For purposes of this restriction, the acquisition of bonds, debentures, other debt securities or instruments, or participations or other interests therein and investments in government obligations, commercial paper, certificates of deposit, bankers' acceptances or similar instruments will not be considered the making of a loan. In addition, the Funds may (i) lend portfolio securities, (ii) enter into repurchase agreements, and (iii) participate in an interfund lending program with other RICs;
8. Engage in short sales of securities or maintain a short position, except that the Funds may (a) sell short "against the box" and (b) maintain short positions in connection with the use of financial options and futures, forward and spot currency contracts, swap transactions and other financial contracts or derivative instruments; and
9. Purchase securities on margin except for the use of short-term credit necessary for the clearance of purchases and sales of portfolio securities, provided that the Funds may make initial and variation margin deposits in connection with permitted transactions in options and futures, forward and spot currency contracts, swap transactions and other financial contracts or derivative instruments.

When engaging in options, futures and forward currency contract strategies, the Funds will either: (1) set aside or " earmark" cash or liquid securities in a segregated account with the custodian in the prescribed amount; or (2) hold securities or other options or futures contracts whose values are expected to offset ("cover") its obligations thereunder. Securities, currencies or other options or futures contracts used for cover cannot be sold or closed out while the strategy is outstanding, unless they are replaced with similar assets.

TRUSTEES AND OFFICERS

The following tables present certain information regarding the Board of Trustees and officers of the Trust. None of the Trustees are an “interested person” of the Trust, the Adviser, another investment adviser of a series of the Trust, or Foreside Funds Distributors LLC, the principal underwriter of the Trust (“Underwriter”), within the meaning of the 1940 Act and each Trustee is referred to as an “Independent Trustee” and is listed under such heading below. Employees of certain service providers to the Trust serve as officers of the Trust; such persons are not compensated by the Funds. The address of each Trustee and officer as it relates to the Trust’s business is 301 Bellevue Parkway, 2nd Floor, Wilmington, DE 19809.

Name and Date of Birth	Position(s) Held with Trust	Term of Office and Length of Time Served	Principal Occupation(s) During Past Five Years	Number of Funds in Trust Complex Overseen by Trustee	Other Directorships Held by Trustee
INDEPENDENT TRUSTEES					
Robert J. Christian Date of Birth: 2/49	Trustee and Chairman of the Board	Shall serve until death, resignation or removal. Trustee and Chairman since 2007.	Retired since February 2006; Executive Vice President of Wilmington Trust Company from February 1996 to February 2006; President of Rodney Square Management Corporation (“RSMC”) (investment advisory firm) from 1996 to 2005; Vice President of RSMC from 2005 to 2006.	41	Optimum Fund Trust (registered investment company with 6 portfolios).
Iqbal Mansur Date of Birth: 6/55	Trustee	Shall serve until death, resignation or removal. Trustee since 2007.	University Professor, Widener University.	41	None.

Name and Date of Birth	Position(s) Held with Trust	Term of Office and Length of Time Served	Principal Occupation(s) During Past Five Years	Number of Funds in Trust Complex Overseen by Trustee	Other Directorships Held by Trustee
Nicholas M. Marsini, Jr. Date of Birth: 8/55	Trustee	Shall serve until death, resignation or removal. Trustee since 2016.	Retired since March 2016. President of PNC Bank Delaware from June 2011 to March 2016; Executive Vice President of Finance of BNY Mellon from July 2010 to January 2011; Executive Vice President and Chief Financial Officer of PNC Global Investment Servicing from September 1997 to July 2010.	41	Brinker Capital Destinations Trust (registered investment company with 10 portfolios).
Stephen M. Wynne Date of Birth: 1/55	Trustee	Shall serve until death, resignation or removal. Trustee since 2009.	Retired since December 2010; Chief Executive Officer of US Funds Services, BNY Mellon Asset Servicing from July 2010 to December 2010; Chief Executive Officer of PNC Global Investment Servicing from March 2008 to July 2010; President, PNC Global Investment Servicing from 2003 to 2008.	41	Copeland Trust (registered investment company with 2 portfolios).

Name and Date of Birth	Position(s) Held with Trust	Term of Office and Length of Time Served	Principal Occupation(s) During Past Five Years	Number of Funds in Trust Complex Overseen by Trustee	Other Directorships Held by Trustee
Nancy B. Wolcott Date of Birth: 11/54	Trustee	Shall serve until death, resignation or removal. Trustee since 2011.	Retired since May 2014; EVP, Head of GFI Client Service Delivery, BNY Mellon from January 2012 to May 2014; EVP, Head of US Funds Services, BNY Mellon from July 2010 to January 2012; President of PNC Global Investment Servicing from 2008 to July 2010; Chief Operating Officer of PNC Global Investment Servicing from 2007 to 2008; Executive Vice President of PFPC Worldwide Inc. from 2006 to 2007.	41	Lincoln Variable Insurance Products Trust (registered investment company with 92 portfolios).

EXECUTIVE OFFICERS

Name and Date of Birth	Position(s) Held with Trust	Term of Office and Length of Time Served	Principal Occupation(s) During Past Five Years
Joel L. Weiss Date of Birth: 1/63	President and Chief Executive Officer	Shall serve until death, resignation or removal. Officer since 2007.	President of JW Fund Management LLC since June 2016; Vice President and Managing Director of BNY Mellon Investment Servicing (US) Inc. and predecessor firms from 1993 to June 2016.
T. Richard Keyes Date of Birth: 1/57	Treasurer and Chief Financial Officer	Shall serve until death, resignation or removal. Officer since 2016.	President of TRK Fund Consulting LLC since July 2016; Head of Tax — U.S. Fund Services of BNY Mellon Investment Servicing (US) Inc. and predecessor firms from February 2006 to July 2016.
Vincenzo A. Scarduzio Date of Birth: 4/72	Secretary	Shall serve until death, resignation or removal. Officer since 2012.	Director and Vice President Regulatory Administration of The Bank of New York Mellon and predecessor firms since 2001.
David C. Lebisky Date of Birth: 5/72	Chief Compliance Officer and Anti-Money Laundering Officer	Shall serve until death, resignation or removal. Officer since 2015.	President of Lebisky Compliance Consulting LLC since October 2015; Consultant, Duff & Phelps Compliance Consulting since 2016; Senior Consultant, Freeh Group International Solutions, LLC (a global risk management firm) from 2015 to 2018; Scotia Institutional Investments US, LP, Director of Regulatory Administration from 2010 to 2014.

LEADERSHIP STRUCTURE AND RESPONSIBILITIES OF THE BOARD AND ITS COMMITTEES. The basic responsibilities of the Trustees are to monitor the Trust and its funds' financial operations and performance, oversee the activities and legal compliance of the Adviser and other major service providers, keep themselves informed and exercise their business judgment in making decisions important to the Trust's proper functioning based on what the Trustees reasonably believe to be in the best interests of the shareholders. The Board of Trustees is comprised of five individuals, each of whom is an Independent Trustee. The Board of Trustees meets multiple times during the year (but at least quarterly) to review the investment performance of the funds and other operational matters, including policies and procedures with respect to compliance with regulatory and other requirements.

The Board of Trustees has appointed an Independent Trustee to serve in the role of Chairman. The Chairman's primary role is to participate in the preparation of the agenda for meetings of the Board of Trustees and the identification of information to be presented to the Board of Trustees with respect to matters to be acted upon by the Board of Trustees. The Chairman also presides at all meetings of the Board of Trustees and acts as a liaison with service providers, officers, attorneys, and other Trustees generally between meetings. The Chairman may perform such other functions as may be requested by the Board of Trustees from time to time. Except for any duties specified herein or pursuant to the Trust's Declaration of Trust or By-Laws, the designation of Chairman does not impose on such Independent Trustee any duties, obligations or liability that is greater than the duties, obligations or liability imposed on such person as a member of the Board of Trustees, generally.

Each Trustee was appointed to serve on the Board of Trustees because of his or her experience, qualifications, attributes and/or skills as set forth in the subsection "Trustee Qualifications," below. Based on a review of the Board of Trustees and its function, the Trustees have determined that the leadership structure of the Board of Trustees is appropriate and that the Board of Trustees' role in the risk oversight of the Trust, as discussed below, allows the Board of Trustees to effectively administer its oversight function.

The Board of Trustees has an Audit Committee and a Nominating and Governance Committee. The responsibilities of each committee and its members are described below.

AUDIT COMMITTEE. The Audit Committee is comprised of Messrs. Mansur, Marsini and Wynne, each of whom is an Independent Trustee. Mr. Wynne serves as the chairman of the Audit Committee. The Board of Trustees has adopted a written charter (the "Audit Committee Charter") for the Audit Committee. Pursuant to the Audit Committee Charter, the Audit Committee has the responsibility, among others, to (1) select the Trust's independent registered public accountants; (2) review and approve the scope of the independent registered public accountants' audit activity; (3) oversee the audit process of the financial statements which are the subject of the independent registered public accountants' certifications; and (4) review with such independent registered public accountants the adequacy of the Trust's basic accounting system and the effectiveness of the Trust's internal accounting controls. The Audit Committee meets at least two times per year. The Audit Committee met five times during the Trust's fiscal year ended April 30, 2018.

NOMINATING AND GOVERNANCE COMMITTEE. The Nominating and Governance Committee is comprised of Messrs. Mansur, Marsini and Ms. Wolcott. Mr. Mansur serves as the chairman of the Nominating and Governance Committee. The Board of Trustees has adopted a written charter for the Nominating and Governance Committee. The Nominating and Governance Committee is responsible for formulating a statement of corporate governance; assessing the size, structure and composition of the Board of Trustees; determining trustee qualification guidelines as well as compensation, insurance and indemnification of Trustees; identifying Trustee candidates; oversight of Board of Trustees self-evaluations; reviewing certain regulatory and corporate matters of the Trust; and identifying, from time to time, qualified candidates to serve as the CCO for the Trust. The Nominating and Governance Committee meets at least once a year. The Nominating and Governance Committee met two times during the Trust's fiscal year ended April 30, 2018. The Nominating and Governance Committee identifies potential nominees in accordance with its Statement of Policy on Qualifications for Board of Trustees Membership. The Nominating and Governance Committee will consider nominee candidates recommended by shareholders. Shareholders who wish to recommend individuals for consideration by the Nominating and Governance Committee as nominee candidates may do so by submitting a written recommendation to the Secretary of the Trust at: 301 Bellevue Parkway, 2nd Floor, Wilmington, DE 19809. Submissions must include sufficient biographical information concerning the recommended individual, including age, at least ten years of employment history with employer names and a description of the employer's business, and a list of board memberships (if any). The submission must be accompanied by a written consent of the individual to stand for election if nominated by the Board of Trustees and to serve if elected. Recommendations must be received in a sufficient time, as determined by the Nominating and Governance Committee in its sole discretion, prior to the date proposed for the consideration of nominee candidates by the Board of Trustees. Upon the written request of shareholders holding at least a 5% interest in the Trust's shares in the aggregate, the Secretary shall present to any special meeting of shareholders such nominees for election as trustees as specified in such written request.

TRUSTEE QUALIFICATIONS. The following is a brief discussion of the experience, qualifications, attributes and/or skills that led to the Board of Trustees' conclusion that each individual identified below is qualified to serve as a Trustee of the Trust.

The Board of Trustees believes that the Trustees' ability to review critically, evaluate, question and discuss information provided to them, to interact effectively with the Adviser, other service providers, counsel and independent auditors, and to exercise effective business judgment in the performance of their duties, support the conclusion that each Trustee is qualified to serve as a Trustee of the Trust. In addition, the following specific experience, qualifications, attributes and/or skills apply as to each Trustee: Mr. Marsini is the former President of PNC Bank Delaware, former Executive Vice President of Finance of BNY Mellon and former Chief Financial Officer of PNC Global Investment Servicing; Mr. Wynne is the former Chief Executive Officer of Global Financial Institutions Client Service Delivery, BNY Mellon Asset Servicing, a provider of transfer agency, accounting and administrative services to mutual funds, former Head of US Funds Services, BNY Mellon Asset Servicing and former Chief Executive Officer of PNC Global Investment Servicing; Ms. Wolcott is the former Executive Vice President of US Funds Services, BNY Mellon Asset Servicing and former Executive Vice President of PNC Global Investment Servicing; Mr. Christian served as the Executive Vice President of Wilmington Trust and currently serves as the Trustee to other mutual fund complexes; and Mr. Mansur is a Professor of Finance, School of Business Administration, at Widener University.

In its periodic self-assessment of the effectiveness of the Board of Trustees, the Board of Trustees considers the complementary individual skills and experience of the individual Trustees primarily in the broader context of the Board of Trustees' overall composition so that the Board of Trustees, as a body, possesses the appropriate (and appropriately diverse) skills and experience to oversee the business of the Trust and its funds. The summaries set forth above as to the experience, qualifications, attributes and/or skills of the Trustees do not constitute holding out the Board of Trustees or any Trustee as having any special expertise or experience, and do not impose any greater responsibility or liability on any such person or on the Board of Trustees as a whole than would otherwise be the case.

RISK OVERSIGHT. Through its direct oversight role, and indirectly through its Committees, of officers and service providers, the Board of Trustees performs a risk oversight function for the Trust and its funds consisting, among other things, of the following activities: (1) at regular and special Board of Trustees meetings, and on an ad hoc basis as needed, receiving and reviewing reports related to the performance and operations of the Trust and its funds; (2) reviewing and approving, as applicable, the compliance policies and procedures of the Trust; (3) meeting with the portfolio management team to review investment strategies, techniques and the processes used to manage related risks; (4) meeting with representatives of key service providers, including the investment advisers, administrator, distributor, transfer agent, custodian and independent registered public accounting firms of the funds, to review and discuss the activities of the Trust and its funds and to provide direction with respect thereto; and (5) engaging the services of the Chief Compliance Officer of the Trust to test the compliance procedures of the Trust and its service providers.

SECURITY AND OTHER INTERESTS. The following table sets forth the equity securities in the Funds and in all registered investment companies overseen by the Trustees within the Trust Complex that the Trustees beneficially owned as of December 31, 2017.

Name of Trustee	Dollar Range of Equity Securities in the Fund	Aggregate Dollar Range of Equity Securities in All Registered Investment Companies Overseen by Trustee within the Family of Investment Companies
Independent Trustees		
Robert J. Christian	None	Over \$100,000
Iqbal Mansur	None	Over \$100,000
Nicholas M. Marsini, Jr.	None	None
Nancy B. Wolcott	None	None
Stephen M. Wynne	None	\$50,001 - \$100,000

As of December 31, 2017, none of the Independent Trustees, or any of their immediate family members (i.e., spouse or dependent children) served as an officer, director or was an employee of the Trust, the Adviser or the Underwriter, or of any of their respective affiliates. Nor do any of such persons serve as an officer or director or is an employee of any company controlled by or under common control with such entities. Additionally, as of the same date, none of the Independent Trustees or any of their immediate family members (i.e., spouse or dependent children) owned beneficially or of record any interest in the Adviser or the Underwriter, or in any person directly or indirectly controlling, controlled by, or under common control with such entities.

COMPENSATION. In addition to the fees below, the Trust reimburses the Trustees for their related business expenses. The following table sets forth the aggregate compensation paid to each of the Trustees for the fiscal year ended April 30, 2018.

Name of Trustee	Aggregate Compensation from the Trust	Pension or Retirement Benefits Accrued as Part of the Trust's Expenses	Estimated Annual Benefits upon Retirement	Total Compensation from the Trust Complex
Robert J. Christian	\$ 113,250	\$ 0	\$ 0	\$ 113,250
Iqbal Mansur	\$ 104,000	\$ 0	\$ 0	\$ 104,000
Nicholas M. Marsini, Jr.	\$ 102,000	\$ 0	\$ 0	\$ 102,000
Nancy B. Wolcott	\$ 100,750	\$ 0	\$ 0	\$ 100,750
Stephen M. Wynne	\$ 107,500	\$ 0	\$ 0	\$ 107,500

CODE OF ETHICS

In accordance with Rule 17j-1 of the 1940 Act, each of the Trust and the Adviser has adopted a code of ethics (each, a "Code" and together, the "Codes").

The Codes are intended to prohibit or restrict transactions that may be deemed to create a conflict of interest among the Adviser or the Trust. Each Code identifies the specific employees, officers or other persons who are subject thereto and all are required to abide by the provisions thereunder. Persons covered under the Codes may engage in personal trading for their own accounts, including securities that may also be purchased or held or traded by the Fund under certain circumstances.

Under the Code adopted by the Trust, personal trading is subject to specific restrictions, limitations, guidelines and other conditions. Under the Code adopted by the Adviser, personal trading is subject to pre-clearance and other conditions set forth in its Code.

On an annual basis or whenever deemed necessary, the Board of Trustees reviews reports regarding all of the Codes including information about any material violations of the Codes. The Codes are on public file as exhibits to the Trust's registration statement with the SEC.

PROXY VOTING

The Board of Trustees has adopted the Adviser's proxy voting procedures and has delegated the responsibility for exercising the voting rights associated with the securities purchased and/or held by a Fund to the Adviser, subject to the Board of Trustees' continuing oversight. In exercising its voting obligations, the Adviser is guided by general fiduciary principles. It must act prudently, solely in the interest of the Funds, and for the purpose of providing benefits to such Funds. The Adviser will consider the factors that could affect the value of a Fund's investment in its determination on a vote.

The Adviser's proxy voting procedures establish a protocol for voting of proxies in cases in which the Adviser or an affiliated entity has an interest that is reasonably likely to be affected by a proxy to be voted on behalf of a Fund or that could compromise the Adviser's independence of judgment and action in voting the proxy in the best interest of a Fund's shareholders. The Adviser believes that consistently voting in accordance with its stated guidelines will address most conflicts of interest, and to the extent any deviation of such guidelines occurs it will be carefully assessed by a securities review committee to determine if a conflict of interest exists, and if a material conflict of interest exists, the committee will determine an appropriate resolution, which may include consultation with management or Trustees of the Trust, analyses by independent third parties, or other means necessary to ensure and demonstrate the proxy was voted in the best interests of shareholders. The proxy voting policies and procedures of the Adviser are attached herewith as Exhibit B. The Funds are required to file annually their proxy voting record on Form N-PX with the SEC. Form N-PX is required to be filed by August 31 of each year and when filed will be available by request by calling the Fund at (888) 447-0014 or on the SEC's website at www.sec.gov.

CONTROL PERSONS AND PRINCIPAL HOLDERS OF SECURITIES

A principal shareholder is any person who owns (either of record or beneficially) 5% or more of the outstanding shares of a Fund. Any person who directly or indirectly owns 5% or more of the outstanding voting securities of the Fund, may be deemed an “affiliated person” of the Fund, as such term is defined in the 1940 Act. A control person is one who owns, either directly or indirectly, more than 25% of the voting securities of a company or acknowledges the existence of control. As of August 2, 2018, the following persons were the only persons who were record owners (or to the knowledge of the Trust, beneficial owners) of 5% or more of the shares of each Fund. Additionally, as of the same date, none of the Trustees and officers of the Trust owned individually and together in excess of 1% of any class of outstanding shares of the Funds.

Class I Shares Name and Address of Owner	Number of Shares Held of Record or Beneficially	Percentage of Class I Shares Owned

INVESTMENT ADVISORY SERVICES

DuPont Capital Management Corporation, the Adviser, is a registered investment adviser located at Delaware Corporate Center, One Righter Parkway, Suite 3200, Wilmington, Delaware 19803. The Adviser is a wholly owned subsidiary of the E. I. du Pont de Nemours and Company, and is an independent registered investment adviser with a broadly diversified product offering. The Adviser, which was established in 1975 and became a SEC registered investment adviser in 1993, offers investment advisory services and global perspective to institutional investors. As of June 30, 2018, the Adviser had over \$27.8 billion in assets under management.

Pursuant to an investment advisory agreement between the Trust, on behalf of the Fund, and the Adviser, the Adviser, subject to the general oversight of the Board of Trustees, has overall responsibility for directing the investments of the Fund in accordance with its investment objective, policies and limitations (the "Investment Advisory Agreement"). The Investment Advisory Agreement has an initial term of two years and continues in effect from year to year thereafter if such continuance is specifically approved at least annually by the Board of Trustees including a majority of the Independent Trustees casting votes in person at a meeting called for such purpose, or by vote of a majority of the outstanding voting securities of the Fund. The Investment Advisory Agreement may be terminated by the Fund on 60 days' written notice to the Adviser without penalty or by the Adviser on 90 days' written notice to the Trust without penalty. The Investment Advisory Agreement will also terminate automatically in the event of their assignment as defined in the 1940 Act. Pursuant to the Investment Advisory Agreement, the Adviser is entitled to receive an annual investment advisory fee, paid monthly, comprising 1.05% of the average daily net assets of the Emerging Markets Fund and 0.60% of the average daily net assets of the Emerging Markets Debt Fund.

The Adviser has contractually agreed to reduce its investment advisory fee and/or reimburse certain expenses of the Funds to the extent necessary to ensure that a Fund's total operating expenses, excluding taxes, fees and expenses attributable to a distribution or service plan adopted by the Trust, "Acquired Fund Fees and Expenses," interest, extraordinary items and brokerage commissions, do not exceed 1.27% (on an annual basis) of average daily net assets with respect to the Emerging Markets Fund and 0.89% (on an annual basis) of average daily net assets with respect to the Emerging Markets Debt Fund (the "Expense Limitation"). The Expense Limitation will remain in place until August 31, 2019, unless the Board of Trustees approves its earlier termination. The Adviser is entitled to recover, subject to approval by the Board of Trustees, such amounts reduced or reimbursed for a period of up to three (3) years from the date on which the Adviser reduced its compensation and/or assumed expenses for a Fund. The Adviser is permitted to seek reimbursement from the Fund, subject to certain limitations, for fees it waived and Fund expenses it paid to the extent the total annual fund operating expenses do not exceed the limits described above or any lesser limits in effect at the time of reimbursement. No recoupment will occur unless a Fund's expenses are below the Expense Limitation amount. The following tables set forth the aggregate fees paid to the Adviser by each Fund for services rendered during for the fiscal years ended April 30, 2016, April 30, 2017 and April 30, 2018.

For the Fiscal Year Ended April 30, 2018

Fund	Gross Advisory Fees Earned	Advisory Fee Waivers and Expenses Waived or Reimbursed		Net Advisory Fees
DuPont Capital Emerging Markets Fund	\$ 342,986	\$ (295,495)		\$ 47,491
DuPont Capital Emerging Markets Debt Fund	\$ 38,897	\$ (166,742)		\$ (127,845)

For the Fiscal Year Ended April 30, 2017

Fund	Gross Advisory Fees Earned	Advisory Fee Waivers and Expenses Waived or Reimbursed		Net Advisory Fees
DuPont Capital Emerging Markets Fund	\$ 411,906	\$ (263,954)		\$ 147,952
DuPont Capital Emerging Markets Debt Fund	\$ 35,645	\$ (167,169)		\$ (131,524)

For the Fiscal Year Ended April 30, 2016

Fund	Gross Advisory Fees Earned	Advisory Fee Waivers and Expenses Waived or Reimbursed		Net Advisory Fees
DuPont Capital Emerging Markets Fund	\$ 912,208	\$ (30,175)		\$ 882,033
DuPont Capital Emerging Markets Debt Fund	\$ 38,611	\$ (157,238)		\$ (118,627)

Under the terms of the Investment Advisory Agreement, the Adviser agrees to: (a) direct the investments of each Fund, subject to and in accordance with each Fund's investment objectives, policies and limitations set forth in the Prospectus and this SAI; (b) purchase and sell for each Fund, securities and other investments consistent with the Fund's objective and policies; (c) supply office facilities, equipment and personnel necessary for servicing the investments of the Funds; (d) pay the salaries of all personnel of the Adviser performing services relating to research, statistical and investment activities on behalf of the Trust; (e) make available and provide such information as the Trust and/or its administrator may reasonably request for use in the preparation of its registration statement, reports and other documents required by any applicable federal, foreign or state statutes or regulations; and (f) make its officers and employees available to the Trustees and officers of the Trust for consultation and discussion regarding the management of each Fund and its investment activities. Additionally, the Adviser agrees to create and maintain all necessary records in accordance with all applicable laws, rules and regulations pertaining to the various functions performed by it and not otherwise created and maintained by another party pursuant to contract with the Funds. The Trust and/or the Adviser may at any time or times, upon approval by the Board of Trustees, enter into one or more sub-advisory agreements with a sub-adviser pursuant to which the Adviser delegates any or all of its duties as listed.

The Investment Advisory Agreement provides that the Adviser shall not be liable for any error of judgment or mistake of law or for any loss suffered by a Fund in connection with the matters to which the agreement relates, except to the extent of a loss resulting from willful misfeasance, bad faith or gross negligence on its part in the performance of its obligations and duties under the agreement.

The salaries of all personnel of the Adviser performing services for each Fund relating to research, statistical and investment activities are paid by the Adviser.

Additionally, the Adviser has agreed to compensate, at its own expense and out of its own legitimate profits, the Underwriter for, among other services: (i) entering into selling and/or service agreements to assist in facilitating distribution of the Fund's shares; (ii) preparing and executing selling and service agreements; and (iii) reviewing and submitting to FINRA the Fund's advertising and sales literature.

The front-end sales load reallocated to dealers as a percentage of the offering price of a Fund's Class A shares is described in the Prospectus.

PORTFOLIO MANAGERS

The management of the Funds is the responsibility of a group of investment professionals employed by the Adviser. The information provided below supplements the information provided in the Prospectus under the heading "Portfolio Managers" with respect to the investment professionals responsible, either individually or jointly, for the day-to-day management of each of the Funds, including information regarding:

- (i) "Other Accounts Managed." Other accounts managed by Lode Devlaminck, Erik Zipf and Yong Zhu, who are the portfolio managers primarily responsible for the day-to-day management of the Funds as of April 30, 2018;
- (ii) "Material Conflicts of Interest." Material conflicts of interest identified by the Adviser that may arise in connection with a portfolio manager's management of a Fund's investments and investments of other accounts managed. These potential conflicts of interest include material conflicts between the investment strategy of a Fund and the investment strategy of the other accounts managed by the portfolio manager and conflicts associated with the allocation of investment opportunities between a Fund and other accounts managed by the portfolio manager. *Additional conflicts of interest may potentially exist or arise that are not discussed below;*
- (iii) "Compensation." A description of the structure of and method used to determine the compensation received by the Funds' portfolio managers from the Funds, the Adviser or any other source with respect to managing the Funds and any other accounts as of April 30, 2018; and
- (iv) "Ownership of Securities." Information regarding each portfolio manager's dollar range of equity securities beneficially owned in the Funds as of April 30, 2018.

Other Accounts Managed. The table below includes details regarding the number of other registered investment companies, other pooled investment vehicles and other accounts managed by Messrs. Devlaminck, Zipf and Zhu, total assets under management for each type of account, and total assets in each type of account with performance-based advisory fees, as of April 30, 2018.

Types of Accounts	Total Number of Accounts Managed	Total Assets (million)	Number of Accounts Managed subject to a Performance Based Advisory Fee	Total Asset Managed subject to a Performance Based Advisory Fee (million)
Lode Devlaminck				
Registered Investment Companies	0	\$ 0	0	\$ 0
Other Pooled Investment Vehicles	0	\$ 0	0	\$ 0
Other Accounts	1	\$ 486	0	\$ 0
Erik Zipf				
Registered Investment Companies	0	\$ 0	0	\$ 0
Other Pooled Investment Vehicles	0	\$ 0	0	\$ 0
Other Accounts	1	\$ 486	0	\$ 0
Yong Zhu				
Registered Investment Companies	0	\$ 0	0	\$ 0
Other Pooled Investment Vehicles	2	\$ 168	0	\$ 0
Other Accounts	2	\$ 413	0	\$ 0

Material Conflicts Of Interest. The Adviser provides advisory services to other clients that invest in securities of the same type in which the Funds invest, and the portfolio managers provide portfolio management services to other accounts using a substantially similar investment strategy as the Funds. The portfolio managers manage accounts subject to a performance-based fee and may manage accounts with materially higher fee arrangements than that of the Funds. The side-by-side management of these accounts with the Funds may raise potential conflicts of interest relating to cross-trading, the allocation of investment opportunities and the aggregation and allocation of trades. The Adviser is aware of its obligation to ensure that when orders for the same securities are entered on behalf of a Fund and other accounts, that the Fund receives fair and equitable allocation of these orders, particularly where affiliated accounts may participate. The Adviser attempts to mitigate potential conflicts of interest by adopting policies and procedures regarding trade execution brokerage allocation and order aggregation which provide a methodology for ensuring fair treatment for all clients in situations where orders cannot be completely filled or filled at different prices.

Compensation Structure. The Adviser's compensation package for its portfolio managers is comprised of: (1) base salaries in line with the salaries of other large investment management firms; (2) variable, performance-based cash compensation that can be a high multiple of base salary; and (3) long-term compensation. Compensation is paid based on overall performance, individual efforts and support of overall firm initiatives. On a semiannual basis, a performance review is held between professionals and managers to continually measure performance against a set of identified objectives. The Adviser offers a very competitive Retirement Savings Plan (i.e., 401k) with matching grants.

The Adviser has in place a long-term compensation plan based on the growth of the Adviser profits and assets under management. This plan was put in place in order to attract and retain investment talent at the Adviser and is directly tied to the growth of the Adviser's external business. This long term incentive compensation plan is competitive with plans of other asset management firms.

Ownership of Shares of the Funds. As of April 30, 2018, Mr. Devlaminck, Mr. Zipf and Dr. Zhu beneficially owned none of the equity securities of the Funds.

ADMINISTRATION AND ACCOUNTING SERVICES

Pursuant to an Administration and Accounting Services Agreement dated July 19, 2007, The Bank of New York Mellon performs certain administrative services for the Trust including, among other things, assisting in the preparation of the annual post-effective amendments to the Trust's registration statement, assisting in obtaining the fidelity bond and trustees' and officers'/errors and omissions insurance policies, preparing notices, agendas, and resolutions for quarterly Board of Trustees meetings, maintaining the Trust's corporate calendar, maintaining Trust contract files and providing executive and administrative services to support the Independent Trustees. The Bank of New York Mellon also performs certain administrative and accounting services for the Trust such as preparing shareholder reports, providing statistical and research data, assisting the Adviser in compliance monitoring activities, and preparing and filing federal and state tax returns on behalf of the Trust. In addition, The Bank of New York Mellon prepares and files certain reports with the appropriate regulatory agencies and prepares certain materials required by the SEC or any state securities commission having jurisdiction over the Trust. The accounting services performed by The Bank of New York Mellon include determining the NAV per share of each Fund and maintaining records relating to the securities transactions of the Funds.

The table below sets forth the administration and accounting service fees, as well as any fee waiver, paid by the Funds to The Bank of New York Mellon for services rendered during the last three fiscal years:

	Fiscal Year Ended April 30, 2018	Fiscal Year Ended April 30, 2017	Fiscal Year Ended April 30, 2016
Emerging Markets Fund	\$ 99,258	\$ 101,138	\$ 119,308
Emerging Markets Debt Fund	\$ 69,227	\$ 72,116	\$ 73,104

ADDITIONAL SERVICE PROVIDERS

INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM. PricewaterhouseCoopers, LLP, Two Commerce Square, Suite 1800, 2001 Market Street, Philadelphia, PA 19103 serves as the independent registered public accounting firm to the Funds.

LEGAL COUNSEL. Pepper Hamilton LLP, 3000 Two Logan Square, 18th and Arch Streets, Philadelphia, PA 19103, serves as counsel to the Trust.

CUSTODIAN. The Bank of New York Mellon (the “Custodian”), 240 Greenwich Street, New York, NY 10286, serves as the Funds’ custodian. The Custodian’s services include, in addition to the custody of all cash and securities owned by the Trust, the maintenance of custody accounts in the Custodian’s trust department, the segregation of all certificated securities owned by the Trust, the appointment of authorized agents as sub-custodians, disbursement of funds from the custody accounts of the Trust, releasing and delivering securities from the custody accounts of the Trust, maintaining records with respect to such custody accounts, delivering to the Trust a daily and monthly statement with respect to such custody accounts and causing proxies to be executed. The Funds have made arrangements with BNY Mellon Investment Servicing Trust Company to serve as custodian for Individual Retirement Accounts (“IRAs”).

TRANSFER AGENT. BNY Mellon Investment Servicing (US) Inc. (“BNY Mellon Investment Servicing”), 4400 Computer Drive, Westborough, MA 01581-1722, serves as the Trust’s Transfer Agent and Dividend Paying Agent.

OTHER SERVICE PROVIDERS. The Trust has engaged JW Fund Management, LLC, 100 Springdale Rd. Suite A3-416, Cherry Hill, NJ 08003 to provide persons to serve as Principal Executive Officer and Principal Financial Officer and provide various other services for the Trust. The Trust has engaged Duff & Phelps, LLC to provide a person or persons to serve as the Chief Compliance Officer and Anti-Money Laundering Officer and compliance services for the Trust.

BROKERAGE ALLOCATION AND OTHER PRACTICES

The Adviser is responsible for decisions to buy and sell securities for the Funds, the selection of brokers and dealers to execute the Funds’ portfolio transactions, and the negotiation of brokerage commissions. The cost of portfolio securities transactions of the Funds primarily consists of dealer or underwriter spreads and brokerage commissions. Purchases and sales of securities on a securities exchange are effected through brokers who charge a negotiated commission for their services. Increasingly, securities traded over-the-counter also involve the payment of negotiated brokerage commissions. In the over-the-counter market, most securities have historically traded on a “net” basis with dealers acting as principal for their own accounts without a stated commission, although the price of a security usually includes a profit to the dealer. In underwritten offerings, securities are purchased at a fixed price which includes an amount of compensation to the underwriter, generally referred to as the underwriter’s concession or discount. On occasion, certain money market instruments may be purchased directly from an issuer, in which case no commissions or discounts are paid.

Orders may be directed to any broker or dealer, including, to the extent and manner permitted by applicable law, affiliated persons of the Adviser. The Adviser has no obligation to deal with any dealer or group of dealers in the execution of transactions in portfolio securities of a Fund. Where possible, the Adviser deals directly with the dealers who make a market in the securities involved except in those circumstances where better execution is available elsewhere.

The Adviser does not have any specific agreement or understanding with a broker or otherwise that directs the Fund's brokerage transactions because of the research services provided. In general, however, the Adviser may take the receipt of research services into account in selecting brokers, if the Adviser believes that the broker will provide quality execution at competitive rates.

It is the objective of the Adviser to obtain the best results in conducting portfolio transactions for a Fund, taking into account such factors as price (including the applicable dealer-spread or commission), the size, type and difficulty of the transaction involved, the firm's general execution and operations facilities and the firm's risk in positioning the securities involved. While reasonable competitive spreads or commissions are sought, a Fund will not necessarily be paying the lowest spread or commission available. Subject to obtaining the best net results, dealers who provide supplemental investment research (such as quantitative and modeling information assessments and statistical data and provide other similar services) to the Adviser may receive orders for transactions by a Fund. Information so received will be in addition to and not in lieu of the services required to be performed by the Adviser under the Investment Advisory Agreement and the expense of the Adviser will not necessarily be reduced as a result of the receipt of such supplemental information. Supplemental investment research obtained from such dealers might be used by the Adviser in servicing all of its accounts and such research may or may not be useful to the Adviser in connection with a Fund. In addition, as permitted by Section 28(e) of the Securities Exchange Act of 1934, as amended, the Adviser may pay a broker-dealer that provides brokerage and research services an amount of commission for effecting a securities transaction for the Fund in excess of the commission that another broker-dealer would have charged for effecting that transaction if the amount is believed by the Adviser to be reasonable in relation to the value of the overall quality of the brokerage and research services provided. Such research and investment services are those which brokerage houses customarily provide to institutional investors and include research reports on particular industries and companies; economic surveys and analyses; recommendations as to specific securities; research products including quotation equipment and computer related programs; advice concerning the value of securities, the advisability of investing in, purchasing or selling securities and the availability of securities or the purchasers or sellers of securities; analyses and reports concerning issuers, industries, securities, economic factors and trends, portfolio strategy and performance of accounts; services relating to effecting securities transactions and functions incidental thereto (such as clearance and settlement); and other lawful and appropriate assistance to the Adviser in the performance of its decision-making responsibilities. Other clients of the Adviser may indirectly benefit from the provision of these services to the Adviser, and a Fund may indirectly benefit from services provided to the Adviser as a result of transactions for other clients.

Under the 1940 Act, except as permitted by exemptive order or rule, persons affiliated with a Fund are prohibited from dealing with a Fund as principal in the purchase and sale of securities. However, affiliated persons of a Fund may serve as its brokers in certain over-the-counter transactions conducted on an agency basis.

Securities held by the Funds may also be held by, or be appropriate investments for, other funds or investment advisory clients for which the Adviser or its affiliates act as an adviser. Because of different investment objectives or other factors, a particular security may be bought for an advisory client when other clients are selling the same security. If purchases or sales of securities by the Adviser for the Funds as well as its other customers (including any other fund or other investment company or advisory account for which the Adviser acts as investment adviser or sub-adviser) arise for consideration at or about the same time, transactions in such securities will be made, insofar as are feasible, for the respective funds and clients in a manner deemed equitable to all. Transactions effected by the Adviser (or its affiliates) on behalf of more than one of its clients during the same period may increase the demand for securities being purchased or the supply of securities being sold, causing an adverse effect on price. On occasions when the Adviser deems the purchase or sale of a security to be in the best interest of the Funds as well as its other customers the Adviser, to the extent permitted by applicable laws and regulations, may aggregate the securities to be sold or purchased for the Funds with those to be sold or purchased for such other customers in order to obtain the best net price and most favorable execution under the circumstances. In such event, allocation of the securities so purchased or sold, as well as the expenses incurred in the transaction, will be made by the Adviser in the manner it considers to be equitable and consistent with its fiduciary obligations to the Funds and such other customers. In some instances, this procedure may adversely affect the price and size of the position obtainable for the Funds.

The table below sets forth the brokerage commissions paid by the Emerging Markets Fund for the fiscal years ended April 30, 2016, April 30, 2017 and April 30, 2018:

	Fiscal Year Ended April 30, 2018	Fiscal Year Ended April 30, 2017	Fiscal Year Ended April 30, 2016
Brokerage Commissions Paid by the Emerging Markets Fund	\$ 50,180	\$ 39,790	\$ 175,249
Brokerage Commissions Paid by the Emerging Markets Debt Fund	\$ 0	\$ 0	\$ 0

For the fiscal years ended April 30, 2016, April 30, 2017 and April 30, 2018, the Emerging Markets Fund did not pay any brokerage commissions to an affiliate of the Trust. For the fiscal years ended April 30, 2016, April 30, 2017 and April 30, 2018 the Emerging Markets Debt Fund did not pay any broker commissions to an affiliate of the Trust.

The Funds may at times invest in securities of its regular broker-dealers or the parent of its regular broker-dealers. As of April 30, 2018, the Emerging Markets Debt Fund acquired no securities of its regular broker-dealers, or a parent of their regular broker-dealers. During the fiscal year ended April 30, 2018, the Emerging Markets Fund held securities of the following broker dealer, which was its regular broker-dealer:

Issuer	Holdings of Issuer
Barclays Bank, PLC	\$ 517,000

Neither the Funds nor the Adviser has an agreement or understanding with a broker-dealer, or other arrangements to direct the Funds' brokerage transactions to a broker-dealer because of the research services such broker provides to a Fund or the Adviser. While the Adviser does not have arrangements with any broker-dealers to direct such brokerage transactions to them because of research services provided, the Adviser may receive research services from such broker-dealers.

ADDITIONAL COMPENSATION TO FINANCIAL INTERMEDIARIES

The additional compensation to financial intermediaries described in the Prospectus may be calculated based on factors determined by the Adviser and its affiliates from time to time, including: the value of a Fund's shares sold to, or held by, a financial intermediary's customers; gross sales of a Fund's shares by a financial intermediary; or a negotiated lump sum payment.

In addition to the additional cash payments to financial intermediaries described in the Prospectus, subject to applicable FINRA rules and regulations, the Adviser and its affiliates may provide compensation to financial intermediaries that may enable the Adviser and its affiliates to sponsor or participate in educational or training programs, sales contests and other promotions involving the sales representatives and other employees of financial intermediaries in order to promote the sale of a Fund's shares. The Adviser and its affiliates may also pay for the travel expenses, meals, lodging and entertainment of financial intermediaries and their sales representatives and other employees in connection with such educational or training programs, sales contests and other promotions. These payments may vary with each such event.

DISTRIBUTION OF SHARES

Foreside Funds Distributors LLC (the “Underwriter”), located at 899 Cassatt Road, 400 Berwyn Park, Suite 110, Berwyn, PA 19312, serves as a principal underwriter of the Funds’ shares pursuant to an Underwriting Agreement with the Trust. Pursuant to the terms of the Underwriting Agreement, the Underwriter continuously distributes shares of the Funds on a best efforts basis. The Underwriter has no obligation to sell any specific quantity of shares of the Funds. The Underwriter and its officers have no role in determining the investment policies or which securities are to be purchased or sold by the Funds.

The Underwriting Agreement continues in effect for successive annual periods provided such continuance is approved at least annually by a majority of the Trustees, including a majority of the Independent Trustees. The Underwriting Agreement provides that the Underwriter, in the absence of willful misfeasance, bad faith or negligence in the performance of its duties or by reason of reckless disregard of its obligations and duties under the agreement, will not be liable to the Funds or their shareholders for losses arising in connection with the sale of Fund shares.

The Underwriter does not receive compensation from the Funds for its distribution services except the distribution/service fees with respect to the shares of those classes for which a Rule 12b-1 plan is effective, as applicable. The Adviser pays the Underwriter a fee for certain distribution-related services.

The Underwriting Agreement terminates automatically in the event of an assignment. The Underwriting Agreement is also terminable without payment of any penalty with respect to any Fund (i) (by vote of a majority of the Trustees of the Trust who are not interested persons of the Trust and who have no direct or indirect financial interest in the operation of the Funds, or by vote of a majority of the outstanding voting securities of the applicable Fund) on sixty (60) days’ written notice to the Underwriter; or (ii) by the Underwriter on sixty (60) days’ written notice to the Fund.

The Underwriter may enter into agreements with selected broker-dealers, banks or other financial institutions for distribution of shares of the Funds. With respect to certain financial institutions and related Fund “supermarket” platform agreements, the Funds and/or the Adviser, rather than the Underwriter, typically enter into such agreements. These financial institutions may charge a fee for their services and may receive shareholder service or other fees from the Adviser and/or the Funds. These financial institutions may otherwise act as processing agents and are responsible for transmitting purchase, redemption and other requests to the Funds.

CAPITAL STOCK AND OTHER SECURITIES

The Trust issues and offers Class I shares of each Fund. The shares of each Fund, when issued and paid for in accordance with the Prospectus, will be fully paid and non-assessable shares, with equal voting rights and no preferences as to conversion, exchange, dividends, redemption or any other feature.

Shares of a Fund entitle holders to one vote per share and fractional votes for fractional shares held. Shares have non-cumulative voting rights, do not have preemptive or subscription rights and are transferable. Each Fund takes separate votes on matters affecting only that Fund.

The Funds do not hold an annual meeting of shareholders. The Trustees are required to call a meeting of shareholders for the purpose of voting upon the question of removal of any Trustee when requested in writing to do so by the shareholders of record owning not less than 10% of a Fund’s outstanding shares.

PURCHASE, REDEMPTION AND PRICING OF SHARES

PURCHASE OF SHARES. Information regarding the purchase of shares is discussed in the “Purchase of Shares” section of the Prospectus.

REDEMPTION OF SHARES. Information regarding the redemption of shares is discussed in the “Redemption of Shares” section of the Prospectus.

PRICING OF SHARES. For the Funds, the NAV per share of each Fund is determined by dividing the value of the Fund's net assets by the total number of Fund shares outstanding. This determination is made by The Bank of New York Mellon, as of the close of regular trading on the New York Stock Exchange (the "Exchange") (typically 4:00 p.m., Eastern Time) each day the Fund is open for business. The Fund is open for business on days when the Exchange is open for business.

In valuing a Fund's assets, a security listed on an exchange (and not subject to restrictions against sale by the Fund on an exchange) will be valued at its last sale price on the exchange on the day the security is valued. Lacking any sales on such day, the security will be valued at the mean between the closing asked price and the closing bid price prior. Securities listed on multiple exchanges (and not subject to restriction against sale by the Fund on such exchanges) will be similarly valued, using quotations on the exchange on which the security is traded most extensively. Unlisted securities that are quoted on the National Association of Securities Dealers' National Market System, for which there have been sales of such securities on such day, shall be valued at the official closing price on such system on the day the security is valued. If there are no such sales on such day, the value shall be the mean between the closing asked price and the closing bid price. The value of such securities quoted on the NASDAQ Stock Market System, but not listed on the National Market System, shall be valued at the mean between the closing asked price and the closing bid price.

Unlisted securities that are not quoted on the NASDAQ Stock Market System and for which over-the-counter market quotations are readily available will be valued at the mean between the current bid and asked prices for such security in the over-the-counter market. Other unlisted securities (and listed securities subject to restriction on sale) will be valued at fair value as determined in good faith under the direction of the Board of Trustees although the actual calculation may be done by others. Short-term investments with remaining maturities of less than 61 days are valued at amortized cost.

DIVIDENDS

Each Fund intends to distribute substantially all of its net investment income, if any. The Emerging Markets Fund ordinarily declares and pays dividends from net investment income quarterly. The Emerging Markets Debt Fund ordinarily declares dividends from net investment income semi-annually and pays such dividends semi-annually. Distributions, if any, of net short-term capital gain and net capital gain (the excess of net long-term capital gain over the short-term capital loss) realized by the Fund, after deducting any available capital loss carryovers are declared and paid to its shareholders annually.

Each Fund's dividends and distributions are taxable to shareholders (other than retirement plans and other tax-exempt investors) whether received in cash or reinvested in additional shares of the Fund. A dividend or distribution paid by a Fund has the effect of reducing the NAV per share on the ex-dividend date by the amount of the dividend distribution. A dividend or distribution declared shortly after a purchase of shares by an investor would, therefore, represent, in substance, a return of capital to the shareholder with respect to such shares even though it would be subject to federal income tax. This is called "buying a dividend." To avoid "buying a dividend," check a Fund's distribution dates before you invest.

A statement will be sent to you after the end of each year detailing the tax status of your distributions. Please see "Certain Material U.S. Federal Income Tax Considerations" below for more information on the federal income tax consequences of dividends and other distributions made by a Fund.

CERTAIN MATERIAL U.S. FEDERAL INCOME TAX CONSIDERATIONS

The following discussion summarizes certain material U.S. federal income tax considerations affecting the Funds and their shareholders. This discussion is for general information only and does not purport to consider all aspects of U.S. federal income taxation that might be relevant to beneficial owners of shares of the Funds. The summary discussion that follows may not be considered to be individual tax advice and may not be relied upon by any shareholder. The summary is based upon provisions of the IRC, applicable U.S. Treasury Regulations (whether temporary, proposed or final) promulgated thereunder (the "Regulations"), and administrative and judicial interpretations thereof, as are in effect as of the date hereof, all of which are subject to change, which change could be retroactive, and may affect the conclusions expressed herein.

The summary applies only to beneficial owners of shares of a Fund in whose hands such shares are capital assets within the meaning of Section 1221 of the IRC, and may not apply to certain types of beneficial owners of shares of a Fund, including, but not limited to insurance companies, tax-exempt organizations, shareholders holding a Fund's shares through tax-advantaged accounts (such as an individual retirement account (an "IRA"), a 401(k) plan account, or other qualified retirement account), financial institutions, pass-through entities, broker-dealers, entities that are not organized under the laws of the United States or a political subdivision thereof, persons who are neither a citizen nor resident of the United States, shareholders holding a Fund's shares as part of a hedge, straddle or conversion transaction, and shareholders who are subject to the alternative minimum tax. Persons who may be subject to tax in more than one country should consult the provisions of any applicable tax treaty to determine the potential tax consequences to them.

If an entity or arrangement treated as a partnership for U.S. federal income tax purposes holds a Fund's common stock as a partner and the activities of such partnership. A partner of a partnership holding a Fund's common stock should consult its own tax advisor regarding the U.S. federal income tax consequences to the partner of the acquisition, ownership and disposition of a Fund's common stock by the partnership.

The summary assumes that shareholders will hold a Fund's common stock as capital assets, which generally means as property held for investment. This discussion addresses only the U.S. income tax consequences of an investment by U.S. shareholders, and, therefore, does not address U.S. estate and gift tax rules, U.S. state or local taxation, the alternative minimum tax, excise taxes, transfer taxes or foreign taxes.

For purposes of the following discussion, "U.S. shareholder" is a shareholder that is (i) a citizen or resident of the United States, (ii) a corporation (or other entity taxable as a corporation) created or organized under the laws of the United States or any state thereof or the District of Columbia, (iii) an estate, the income of which is subject to U.S. federal income taxation regardless of its source or (iv) a trust if (a) a U.S. court can exercise primary supervision over the trust's administration and one or more U.S. persons are authorized to control all substantial decisions of the trust or (b) it has a valid election in effect under applicable Treasury regulations to be treated as a U.S. person. A "Non-U.S. shareholder" is a person that is neither a U.S. shareholder nor an entity treated as a partnership for U.S. federal income tax purposes.

No Fund has requested nor will any Fund request an advance ruling from the Internal Revenue Service (the "IRS") as to the federal income tax matters described below. The IRS could adopt positions contrary to those discussed below and such positions could be sustained. In addition, the following discussion applicable to shareholders of a Fund addresses only some of the federal income tax considerations generally affecting investments in such Fund. Shareholders are urged and advised to consult their own tax advisor with respect to the tax consequences of the ownership, purchase and disposition of an investment in a Fund including, but not limited to, the applicability of state, local, foreign and other tax laws affecting the particular shareholder and to possible effects of changes in federal or other tax laws.

On December 22, 2017, new tax legislation was enacted which includes significant changes in tax rates, restrictions on miscellaneous itemized deductions, changes to the dividends received deduction, restrictions on the deduction of interest and the international operations of domestic businesses. Certain changes have sunset provisions, which are important to note. Because the tax legislation is recently enacted and additional guidance is forthcoming, there is still uncertainty in how the legislation will affect the Funds' investments and shareholders and whether such legislation could have an adverse effect on the Funds' investments or the taxation of the shareholders of the Funds. Shareholders are urged and advised to consult their own tax advisor with respect to the impact of this legislation.

Shareholders are urged and advised to consult their own tax advisor with respect to the tax consequences of the ownership, purchase and disposition of an investment in a Fund including, but not limited to, the applicability of state, local, foreign and other tax laws affecting the particular shareholder and to possible effects of changes in federal or other tax laws.

GENERAL. Each Fund has elected, and intends to continue to qualify each year for, taxation as a RIC under Subchapter M of the IRC. By qualifying as a RIC, a Fund (but not the shareholders) will not be subject to federal income tax on that portion of its investment company taxable income and net realized capital gains that it distributes to its shareholders.

Shareholders should be aware that investments made by a Fund, some of which are described below, may involve complex tax rules some of which may result in income or gain recognition by a shareholder without the concurrent receipt of cash. Although each Fund seeks to avoid significant noncash income, such noncash income could be recognized by a Fund, in which case it may distribute cash derived from other sources in order to meet the minimum distribution requirements described below. Cash to make the required minimum distributions may be obtained from sales proceeds of securities held by a Fund (even if such sales are not advantageous) or, if permitted by its governing documents and other regulatory restrictions, through borrowing the amounts required to be distributed.

QUALIFICATION AS A REGULATED INVESTMENT COMPANY. Qualification as a RIC under the IRC requires, among other things, that each Fund: (a) derive at least 90% of its gross income for each taxable year from (i) dividends, interest, payments with respect to securities loans and gains from the sale or other disposition of stock, securities or foreign currencies, or other income (including but not limited to gains from options, futures and forward contracts) derived with respect to its business of investing in such stock, securities or currencies, and (ii) net income from certain qualified publicly traded partnerships (together with (i), the “Qualifying Income Requirement”), and (b) diversify its holdings so that, at the close of each quarter of the taxable year: (i) at least 50% of the value of its assets is comprised of cash, cash items (including receivables), U.S. government securities, securities of other RICs and other securities, with those other securities limited, in respect of any one issuer, to an amount that does not exceed 5% of the value of its total assets and that does not represent more than 10% of the outstanding voting securities of such issuer; and (ii) not more than 25% of the value of its assets is invested in the securities (other than U.S. government securities or securities of other RICs) of any one issuer or the securities (other than the securities of other RICs) of two or more issuers controlled by it and engaged in the same, similar or related trades or businesses, or one or more “qualified publicly traded partnerships” (together with (i) the “Diversification Requirement”).

The Treasury Department is authorized to promulgate regulations under which gains from foreign currencies (and options, futures, and forward contracts on foreign currency) would constitute qualifying income for purposes of the Qualifying Income Requirement only if such gains are directly related to the principal business of a Fund in investing in stock or securities or options and futures with respect to stock or securities. To date, no such regulations have been issued.

As a RIC, a Fund generally will not be subject to U.S. federal income tax on the portion of its income and capital gains that it distributes to its shareholders in any taxable year for which it distributes, in compliance with the IRC’s timing and other requirements the sum of (i) at least 90% of its investment company taxable income (which includes dividends, taxable interest, taxable original issue discount income, market discount income, income from securities lending, net short-term capital gain in excess of net long-term capital loss, certain net realized foreign currency exchange gains, and any other taxable income other than “net capital gain” as defined below and is reduced by deductible expenses all determined without regard to any deduction for dividends paid); and (ii) 90% of its tax-exempt interest, if any, net of certain expenses allocable thereto (“net tax-exempt interest”). Each Fund may retain for investment all or a portion of its net capital gain (i.e., the excess of its net long-term capital gain over its net short-term capital loss). If a Fund retains any investment company taxable income or net capital gain, it will be subject to tax at regular corporate rates on the amount retained. If a Fund retains any net capital gain, it may designate the retained amount as undistributed net capital gain in a notice to its shareholders, who will be (i) required to include in income for federal income tax purposes, as long-term capital gain, their shares of such undistributed amount; and (ii) entitled to credit their proportionate shares of tax paid by such Fund against their federal income tax liabilities, if any, and to claim refunds to the extent the credit exceeds such liabilities. For federal income tax purposes, the tax basis of the shares owned by a shareholder of a Fund will be increased by the amount of undistributed net capital gain included in the shareholder’s gross income and decreased by the federal income tax paid by such Fund on that amount of capital gain.

The qualifying income and asset requirements that must be met under the IRC in order for a Fund to qualify as a RIC, as described above, may limit the extent to which it will be able to engage in derivative transactions. Rules governing the federal income tax aspects of derivatives, including swap agreements, are not entirely clear in certain respects, particularly in light of two IRS revenue rulings issued in 2006. Revenue Ruling 2006-1 held that income from a derivative contract with respect to a commodity index is not qualifying income for a RIC. Subsequently, the IRS issued Revenue Ruling 2006-31 in which it stated that the holding in Revenue Ruling 2006-1 “was not intended to preclude a conclusion that the income from certain instruments (such as certain structured notes) that create a commodity exposure for the holder is qualifying income.” In 2016, the IRS issued proposed regulations and stated they would not address what constitutes a “security” for purposes of Qualifying Income. In addition, the IRS requested comments as to whether the 2006 Revenue Rulings should be withdrawn. Accordingly, each Fund’s ability to invest in commodity related derivative transactions and other derivative transactions may be limited by the Qualifying Income Requirement. Each Fund will account for any investments in commodity derivative transactions in a manner it deems to be appropriate; the IRS, however, might not accept such treatment. If the IRS did not accept such treatment, the status of such Fund as a RIC might be jeopardized.

For purposes of the Qualifying Income Requirement described above, all of the net income of a RIC derived from an interest in a qualified publicly traded partnership (generally, defined as a partnership (x) the interests in which are traded on an established securities market or are readily tradable on a secondary market or the substantial equivalent thereof, and (y) that derives less than 90% of its income from the qualifying income described in clause (i) of the Qualifying Income Requirement described above) will be treated as qualifying income. Income derived from a partnership (other than a qualified publicly traded partnership) will be treated as qualifying income only to the extent such income is attributable to items of income of the partnership which would be qualifying income if realized directly by the RIC. In addition, although in general the passive loss rules of the IRC do not apply to RICs, such rules do apply to a RIC with respect to items attributable to an interest in a qualified publicly traded partnership. Under recent legislation, the transferee of a partnership interest generally is required to withhold 10% of the amount realized on the sale or exchange of a partnership interest after December 31, 2017, unless the transferor certifies it is not a foreign person. However, the IRS has delayed this withholding requirement with respect to publicly traded partnerships. It is unclear when and how this withholding requirement will go into effect.

For purposes of the Diversification Requirement described above, the term “outstanding voting securities of such issuer” will include the equity securities of a qualified publicly traded partnership.

If a Fund fails to satisfy the Qualifying Income Requirement or the Diversification Requirement in any taxable year, such Fund may be eligible for relief provisions if the failures are due to reasonable cause and not willful neglect and if a penalty tax is paid with respect to each failure to satisfy the applicable requirements. Additionally, relief is provided for certain de minimis failures to satisfy the Diversification Requirements where the Fund corrects the failure within a specified period of time. If the applicable relief provisions are not available or cannot be met, such Fund will fail to qualify as a RIC and will be subject to tax in the same manner as an ordinary corporation subject to tax on a flat tax rate of 21% and all distributions from earnings and profits (as determined under U.S. federal income tax principles) to its shareholders will be taxable as ordinary dividend income eligible for the dividends-received deduction for corporate shareholders, and either (i) the 20% long-term capital gains tax rate for non-corporate shareholders with taxable income in excess of \$425,800 (\$479,000 if married and filing jointly) or (ii) the 15% long-term capital gains tax rate (0% for non-corporate shareholders in lower income tax brackets) for non-corporate shareholders with taxable income of less than the threshold amounts. If a Fund fails to qualify as a RIC for a period of greater than two taxable years, the Fund generally would be required to recognize any built-in gains with respect to certain of its assets upon a sale of such assets within ten years of qualifying as a RIC in a subsequent year.

EXCISE TAX. If a Fund fails to distribute by December 31 of each calendar year an amount equal to the sum of (1) at least 98% of its taxable ordinary income (excluding capital gains and losses) for such year, (2) at least 98.2% of the excess of its capital gains over its capital losses (as adjusted for certain ordinary losses) for the twelve month period ending on October 31 of such year, and (3) all taxable ordinary income and the excess of capital gains over capital losses for the prior year that were not distributed during such year and on which it did not pay federal income tax, such Fund will be subject to a nondeductible 4% excise tax (the “Excise Tax”) on the undistributed amounts. A distribution will be treated as paid on December 31 of the calendar year if it is declared by a Fund in October, November, or December of that year to shareholders of record on a date in such month and paid by it during January of the following year. Such distributions will be taxable to shareholders (other than those not subject to federal income tax) in the calendar year in which the distributions are declared, rather than the calendar year in which the distributions are received. Each Fund intends to actually distribute or be deemed to have distributed substantially all of its net income and gain, if any, by the end of each calendar year in compliance with these requirements so that it will generally not be required to pay the Excise Tax. A Fund may in certain circumstances be required to liquidate its investments in order to make sufficient distributions to avoid Excise Tax liability at a time when its Adviser might not otherwise have chosen to do so. Liquidation of investments in such circumstances may affect the ability of a Fund to satisfy the requirements for qualification as a RIC. However, no assurances can be given that a Fund will not be subject to the Excise Tax and, in fact, in certain instances, if warranted, a Fund may choose to pay the Excise Tax as opposed to making an additional distribution.

CAPITAL LOSS CARRYFORWARDS. For losses arising from tax years beginning before December 22, 2010 a Fund is permitted to carry forward a net capital loss from any year to offset its capital gains, if any, realized during the eight years following the year of the loss and such capital loss carryforward is treated as a short-term capital loss in the year to which it is carried. For capital losses realized with respect to tax years of a Fund beginning after December 22, 2010, such Fund may carry capital losses forward indefinitely. For capital losses realized in taxable years beginning after December 22, 2010, the excess of a Fund's net short-term capital losses over its net long-term capital gain is treated as short-term capital losses arising on the first day of the Fund's next taxable year and the excess of a Fund's net long-term capital losses over its net short-term capital gain is treated as long-term capital losses arising on the first day of the Fund's next taxable year. If future capital gains are offset by carried forward capital losses, such future capital gains are not subject to Fund-level federal income taxation, regardless of whether they are distributed to shareholders. Accordingly, the Funds do not expect to distribute any such offsetting capital gains. A Fund cannot carry back or carry forward any net operating losses.

MLPs. The Funds may invest in master limited partnerships which may be treated as qualified publicly traded partnerships. Income from qualified publicly traded partnerships is qualifying income for purposes of the Qualifying Income Requirement, but a Fund's investment in one or more of such qualified publicly traded partnerships is limited to no more than 25% of the value of the Fund's assets and must otherwise satisfy the Diversification Requirement. In addition, as discussed above, new tax legislation imposes a 10% withholding tax on the sale or exchange of a partnership interest for transfers after December 31, 2017. However, the IRS has delayed this withholding requirement with respect to publicly traded partnerships. It is unclear when and how this withholding requirement will go into effect.

ORIGINAL ISSUE DISCOUNT AND MARKET DISCOUNT. A Fund may acquire debt securities that are treated as having original issue discount ("OID") (generally a debt obligation with a purchase price less than its principal amount, such as a zero coupon bond). Generally, a Fund will be required to include the OID in income over the term of the debt security, even though it will not receive cash payments for such OID until a later time, usually when the debt security matures. A Fund may make one or more of the elections applicable to debt securities having OID which could affect the character and timing of recognition of income. Inflation-protected bonds generally can be expected to produce OID income as their principal amounts are adjusted upward for inflation. A portion of the OID includible in income with respect to certain high-yield corporate debt securities may be treated as a dividend for federal income tax purposes if the securities are characterized as equity for federal income tax purposes.

A debt security acquired in the secondary market by a Fund may be treated as having market discount if acquired at a price below redemption value or adjusted issue price if issued with original issue discount. Market discount generally is accrued ratably, on a daily basis, over the period from the date of acquisition to the date of maturity even though no cash will be received. Absent an election by a Fund to include the market discount in income as it accrues, gain on its disposition of such an obligation will be treated as ordinary income rather than capital gain to the extent of the accrued market discount.

In addition, pay-in-kind securities will give rise to income which is required to be distributed and is taxable even though a Fund receives no interest payments in cash on such securities during the year.

Under recently enacted legislation, for tax years beginning after December 31, 2018, each Fund may be required to include in income certain fees that are treated as OID and required to be included in income for financial statement purposes when received (rather than when accrued into income under current law). It is unclear whether this provision applies to market discount as well.

Each Fund generally will be required to make distributions to shareholders representing the income accruing on the debt securities, described above, that is currently includable in income, even though cash representing such income may not have been received by such Fund. Cash to pay these distributions may be obtained from sales proceeds of securities held by a Fund (even if such sales are not advantageous) or, if permitted by such Fund's governing documents, through borrowing the amounts required to be distributed. In the event a Fund realizes net capital gains from such transactions, its shareholders may receive a larger capital gain distribution, if any, than they would have in the absence of such transactions. Borrowing to fund any distribution also has tax implications, such as potentially creating unrelated business taxable income ("UBTI").

OPTIONS, FUTURES AND FORWARD CONTRACTS. The writing (selling) and purchasing of options and futures contracts and entering into forward currency contracts, involves complex rules that will determine for income tax purposes the amount, character and timing of recognition of the gains and losses a Fund realizes in connection with such transactions.

Gains and losses on the sale, lapse, or other termination of options and futures contracts, options thereon and certain forward contracts (except certain foreign currency options, forward contracts and futures contracts) will generally be treated as capital gains and losses. Some regulated futures contracts, certain foreign currency contracts, and certain non-equity options (such as certain listed options or options on broad based securities indexes) held by a Fund ("Section 1256 contracts"), other than contracts on which it has made a "mixed-straddle election", will be required to be "marked-to-market" for federal income tax purposes, that is, treated as having been sold at their market value on the last day of such Fund's taxable year. These provisions may require a Fund to recognize income or gains without a concurrent receipt of cash. Any gain or loss recognized on actual or deemed sales of Section 1256 contracts will be treated as 60% long-term capital gain or loss and 40% short-term capital gain or loss, although certain foreign currency gains and losses from such contracts may be treated as ordinary income or loss as described below. Transactions that qualify as designated hedges are exempt from the mark-to-market rule, but may require a Fund to defer the recognition of losses on futures contracts, foreign currency contracts and certain options to the extent of any unrecognized gains on related positions held by it.

The tax provisions described above applicable to options, futures and forward contracts may affect the amount, timing, and character of a Fund's distributions to its shareholders. For example, the Section 1256 rules described above may operate to increase the amount a Fund must distribute to satisfy the minimum distribution requirement for the portion treated as short-term capital gain which will be taxable to its shareholders as ordinary income, and to increase the net capital gain it recognizes, without, in either case, increasing the cash available to it. A Fund may elect to exclude certain transactions from the operation of Section 1256, although doing so may have the effect of increasing the relative proportion of net short-term capital gain (taxable as ordinary income) and, thus, increasing the amount of dividends it must distribute. Section 1256 contracts also may be marked-to-market for purposes of the Excise Tax.

When a covered call or put option written (sold) by a Fund expires such Fund will realize a short-term capital gain equal to the amount of the premium it received for writing the option. When a Fund terminates its obligations under such an option by entering into a closing transaction, it will realize a short-term capital gain (or loss), depending on whether the cost of the closing transaction is less than (or exceeds) the premium received when it wrote the option. When a covered call option written by a Fund is exercised, such Fund will be treated as having sold the underlying security, producing long-term or short-term capital gain or loss, depending upon the holding period of the underlying security and whether the sum of the option price received upon the exercise plus the premium received when it wrote the option is more or less than the basis of the underlying security.

STRADDLES. Section 1092 deals with the taxation of straddles which also may affect the taxation of options in which a Fund may invest. Offsetting positions held by a Fund involving certain derivative instruments, such as options, futures and forward currency contracts, may be considered, for federal income tax purposes, to constitute “straddles.” Straddles are defined to include offsetting positions in actively traded personal property. In certain circumstances, the rules governing straddles override or modify the provisions of Section 1256, described above. If a Fund is treated as entering into a straddle and at least one (but not all) of its positions in derivative contracts comprising a part of such straddle is governed by Section 1256, then such straddle could be characterized as a “mixed straddle.” A Fund may make one or more elections with respect to mixed straddles. Depending on which election is made, if any, the results with respect to a Fund may differ. Generally, to the extent the straddle rules apply to positions established by a Fund, losses realized by it may be deferred to the extent of unrealized gain in any offsetting positions. Moreover, as a result of the straddle rules, short-term capital loss on straddle positions may be characterized as long-term capital loss, and long-term capital gain may be characterized as short-term capital gain. In addition, the existence of a straddle may affect the holding period of the offsetting positions and cause such sales to be subject to the “wash sale” and “short sale” rules. As a result, the straddle rules could cause distributions that would otherwise constitute “qualified dividend income” to fail to satisfy the applicable holding period requirements, described below, and therefore to be taxed as ordinary income. Further, a Fund may be required to capitalize, rather than deduct currently, any interest expense and carrying charges applicable to a position that is part of a straddle. Because the application of the straddle rules may affect the character and timing of gains and losses from affected straddle positions, the amount which must be distributed to shareholders, and which will be taxed to shareholders as ordinary income or long-term capital gain, may be increased or decreased substantially as compared to the situation where a Fund had not engaged in such transactions.

In circumstances where a Fund has invested in certain pass-through entities, the amount of long-term capital gain that it may recognize from certain derivative transactions with respect to interests in such pass-through entities is limited under the IRC’s constructive ownership rules. The amount of long-term capital gain is limited to the amount of such gain a Fund would have had if it directly invested in the pass-through entity during the term of the derivative contract. Any gain in excess of this amount is treated as ordinary income. An interest charge is imposed on the amount of gain that is treated as ordinary income.

SWAPS AND DERIVATIVES. As a result of entering into swap or derivative agreements, a Fund may make or receive periodic net payments. A Fund may also make or receive a payment when a swap or derivative is terminated prior to maturity through an assignment of the swap, derivative or other closing transaction. Periodic net payments will generally constitute ordinary income or deductions, while termination of a swap or derivative will generally result in capital gain or loss (which will be a long-term capital gain or loss if the Fund has been a party to a swap or derivative for more than one year). With respect to certain types of swaps or derivatives, a Fund may be required to currently recognize income or loss with respect to future payments on such swaps or derivatives or may elect under certain circumstances to mark such swaps or derivatives to market annually for tax purposes as ordinary income or loss. A Fund’s transactions in swaps or other derivatives may be subject to one or more special tax rules (e.g., notional principal contract, straddle, constructive sales, wash sales and short sale rules). These rules may affect whether gains or losses recognized by a Fund are treated as ordinary or capital or as short-term or long-term, accelerate the recognition of income or gains to such Fund, defer losses to such Fund, and cause adjustments in the holding periods of such Fund’s securities. These rules could therefore affect the amount, timing and/or character of distributions to shareholders.

Rules governing the tax aspects of swap or derivative agreements are not entirely clear in certain respects, in particular whether income generated is Qualifying Income. Accordingly, while each Fund intends to account for such transactions in a manner it deems appropriate, the IRS might not accept such treatment. If the IRS did not accept such treatment, the status of the Fund as a RIC might be adversely affected. The Funds intend to monitor developments in this area. Certain requirements that must be met under the IRC in order for each Fund to qualify as a RIC may limit the extent to which a Fund will be able to engage in swap agreements and certain derivatives.

CONSTRUCTIVE SALES. Certain rules may affect the timing and character of gain if a Fund engages in transactions that reduce or eliminate its risk of loss with respect to appreciated financial positions. If a Fund enters into certain transactions (including a short sale, an offsetting notional principal contract, a futures or forward contract, or other transactions identified in Treasury regulations) in property while holding an appreciated financial position in substantially identical property, it will be treated as if it had sold and immediately repurchased the appreciated financial position and will be taxed on any gain (but not loss) from the constructive sale. The character of gain from a constructive sale will depend upon a Fund’s holding period in the appreciated financial position. Loss from a constructive sale would be recognized when the position was subsequently disposed of, and its character would depend on a Fund’s holding period and the application of various loss deferral provisions of the IRC.

In addition, if the appreciated financial position is itself a short sale or other such contract, acquisition of the underlying property or substantially identical property by a Fund will be deemed a constructive sale. The foregoing will not apply, however, to a Fund’s transaction during any taxable year that otherwise would be treated as a constructive sale if the transaction is closed within 30 days after the end of that year and such Fund holds the appreciated financial position unhedged for 60 days after that closing (i.e., at no time during that 60-day period is such Fund’s risk of loss regarding the position reduced by reason of certain specified transactions with respect to substantially identical or related property, such as having an option to sell, being contractually obligated to sell, making a short sale or granting an option to buy substantially identical stock or securities).

WASH SALES. A Fund may be impacted in certain circumstances by special rules relating to “wash sales.” In general, the wash sale rules prevent the recognition of a loss by a Fund from the disposition of stock or securities at a loss in a case in which identical or substantially identical stock or securities (or an option to acquire such property) is or has been acquired by it within 30 days before or 30 days after the sale.

SHORT SALES. A Fund may make short sales of securities. Short sales may increase the amount of short-term capital gain realized by a Fund, which is taxed as ordinary income when distributed to its shareholders. Short sales also may be subject to the “Constructive Sales” rules, discussed above.

PASSIVE FOREIGN INVESTMENT COMPANIES. A Fund may invest in a non-U.S. corporation, which could be treated as a passive foreign investment company (a “PFIC”) or become a PFIC under the IRC. A PFIC is generally defined as a foreign corporation that meets either of the following tests: (1) at least 75% of its gross income for its taxable year is income from passive sources (such as interest, dividends, certain rents and royalties, or capital gains); or (2) an average of at least 50% of its assets produce, or are held for the production of, such passive income. If a Fund acquires any equity interest in a PFIC, such Fund could be subject to federal income tax and interest charges on “excess distributions” received with respect to such PFIC stock or on any gain from the sale of such PFIC stock (collectively “PFIC income”), plus interest thereon even if such Fund distributes the PFIC income as a taxable dividend to its shareholders. The balance of the PFIC income will be included in such Fund’s investment company taxable income and, accordingly, will not be taxable to it to the extent it distributes that income to its shareholders. A Fund’s distributions of PFIC income, if any, will be taxable as ordinary income even though, absent the application of the PFIC rules, some portion of the distributions may have been classified as capital gain.

A Fund will not be permitted to pass through to its shareholders any credit or deduction for taxes and interest charges incurred with respect to a PFIC. Payment of this tax would therefore reduce a Fund’s economic return from its investment in PFIC shares. To the extent a Fund invests in a PFIC, it may elect to treat the PFIC as a “qualified electing fund” (“QEF”), then instead of the tax and interest obligation described above on excess distributions, such Fund would be required to include in income each taxable year its pro rata share of the QEF’s annual ordinary earnings and net capital gain. As a result of a QEF election, a Fund would likely have to distribute to its shareholders an amount equal to the QEF’s annual ordinary earnings and net capital gain to satisfy the IRC’s minimum distribution requirement described herein and avoid imposition of the Excise Tax even if the QEF did not distribute those earnings and gain to such Fund. In most instances it will be very difficult, if not impossible, to make this election because of certain requirements in making the election.

A Fund may elect to “mark-to-market” its stock in any PFIC. “Marking-to-market,” in this context, means including in ordinary income each taxable year the excess, if any, of the fair market value of the PFIC stock over such Fund’s adjusted basis therein as of the end of that year. Pursuant to the election, a Fund also may deduct (as an ordinary, not capital, loss) the excess, if any, of its adjusted basis in the PFIC stock over the fair market value thereof as of the taxable year-end, but only to the extent of any net mark-to-market gains with respect to that stock it included in income for prior taxable years under the election. A Fund’s adjusted basis in its PFIC stock subject to the election would be adjusted to reflect the amounts of income included and deductions taken thereunder. In either case, a Fund may be required to recognize taxable income or gain without the concurrent receipt of cash.

Under proposed regulations, a PFIC is required to distribute income in order for the income to constitute Qualifying Income. Accordingly, a Fund’s ability to invest in PFICs may be limited by the Qualifying Income requirement. Each Fund will account for any investments in PFICs in a manner it deems to be appropriate; the IRS, however, might not accept such treatment. If the IRS did not accept such treatment, the status of a Fund as a RIC might be jeopardized.

FOREIGN CURRENCY TRANSACTIONS. Foreign currency gains and losses realized by a Fund in connection with certain transactions involving foreign currency-denominated debt instruments, certain options, futures contracts, forward contracts, and similar instruments relating to foreign currency, foreign currencies, and foreign currency-denominated payables and receivables are subject to Section 988 of the IRC, which causes such gains and losses to be treated as ordinary income or loss and may affect the amount and timing of recognition of such Fund's income. In some cases elections may be available that would alter this treatment, but such elections could be detrimental to a Fund by creating current recognition of income without the concurrent recognition of cash. If a foreign currency loss treated as an ordinary loss under Section 988 were to exceed a Fund's investment company taxable income (computed without regard to such loss) for a taxable year the resulting loss would not be deductible by it or its shareholders in future years. The foreign currency income or loss will also increase or decrease a Fund's investment company income distributable to its shareholders.

FOREIGN TAXATION. Income received by a Fund from sources within foreign countries may be subject to foreign withholding and other taxes. Tax conventions between certain countries and the United States may reduce or eliminate such taxes. If more than 50% of a Fund's total assets at the close of any taxable year consist of stock or securities of foreign corporations and it meets the distribution requirements described above, such Fund may file an election (the "pass-through election") with the IRS pursuant to which shareholders of the Fund would be required to (i) include in gross income (in addition to taxable dividends actually received) their pro rata shares of foreign income taxes paid by the Fund even though not actually received by such shareholders; and (ii) treat such respective pro rata portions as foreign income taxes paid by them. A Fund will furnish its shareholders with a written statement providing the amount of foreign taxes paid by the Fund that will "pass-through" for the year, if any.

Generally, a credit for foreign taxes is subject to the limitation that it may not exceed the shareholder's U.S. tax attributable to his or her total foreign source taxable income. For this purpose, if the pass-through election is made, the source of a Fund's income will flow through to shareholders. The limitation on the foreign tax credit is applied separately to foreign source passive income, and to certain other types of income. Shareholders may be unable to claim a credit for the full amount of their proportionate share of the foreign taxes paid by a Fund. Various limitations, including a minimum holding period requirement, apply to limit the credit and deduction for foreign taxes for purposes of regular federal tax and alternative minimum tax. In addition, a shareholder of a Fund may lose the ability to use foreign tax credits passed through by a Fund if a Fund's shares are loaned pursuant to a securities lending agreement.

REITs. A Fund may invest in REITs. Investments in REIT equity securities may require a Fund to accrue and distribute taxable income without the concurrent receipt of cash. To generate sufficient cash to make the requisite distributions, a Fund may be required to sell securities in its portfolio (including when it is not advantageous to do so) that it otherwise would have continued to hold. A Fund's investments in REIT equity securities may at other times result in its receipt of cash in excess of the REIT's earnings; if such Fund distributes these amounts, these distributions could constitute a return of capital to its shareholders for federal income tax purposes. Dividends received by a Fund from a REIT generally will not constitute qualified dividend income.

A Fund may invest in REITs that hold residual interests in real estate mortgage investment conduits ("REMICs") or taxable mortgage pools ("TMPs"), or such REITs may themselves constitute TMPs. Under an IRS notice, and Treasury regulations that have yet to be issued but may apply retroactively, a portion of a Fund's income from a REIT that is attributable to the REIT's residual interest in a REMIC or a TMP (referred to in the IRC as an "excess inclusion") will be subject to federal income tax in all events. This notice also provides, and the regulations are expected to provide, that excess inclusion income of a RIC, such as the Funds, will be allocated to shareholders of the RIC in proportion to the dividends received by such shareholders, with the same consequences as if the shareholders held the related REMIC residual interest or invested in the TMP directly. As a result, the Fund may not be a suitable investment for certain tax-exempt shareholders, including a qualified pension plan, an individual retirement account, a 401(k) plan, a Keogh plan and other tax-exempt entities. See "Tax-Exempt Shareholders."

DISTRIBUTIONS. Distributions paid out of a Fund's current and accumulated earnings and profits (as determined at the end of the year), whether reinvested in additional shares or paid in cash, are generally taxable and must be reported by each shareholder who is required to file a federal income tax return except in the case of certain tax-exempt shareholders. Distributions in excess of a Fund's current and accumulated earnings and profits, as computed for federal income tax purposes, will first be treated as a return of capital up to the amount of a shareholder's tax basis in his or her Fund shares and then as capital gain, assuming the shareholder holds his or her shares as a capital asset. A return of capital is not taxable, but reduces a shareholder's tax basis in the shares, thus reducing any loss or increasing any gain on a subsequent taxable disposition by a shareholder of the Fund's shares. Distributions are taxable whether shareholders receive them in cash or receive them in additional shares.

For federal income tax purposes, distributions of investment company taxable income are generally taxable as ordinary income, and distributions of gains from the sale of investments that a Fund owned for one year or less will be taxable as ordinary income. Distributions designated by a Fund as “capital gain dividends” (distributions from the excess of net long-term capital gain over short-term capital losses) will be taxable to shareholders as long-term capital gain regardless of the length of time they have held their shares of such Fund. Such dividends do not qualify as dividends for purposes of the dividends received deduction described below.

Non-corporate shareholders of a Fund may be eligible for the long-term capital gain tax rate applicable to distributions of “qualified dividend income” received by such non-corporate shareholders. The long-term capital gains tax rate is 20% for non-corporate shareholders with taxable income in excess of \$400,000 (\$450,000 if married and filing jointly) and 15% (0% for non-corporate shareholders in lower income tax brackets) for non-corporate shareholders with taxable income of less than the threshold amounts. A Fund’s distribution will be treated as qualified dividend income and therefore eligible for the long-term capital gains tax rate to the extent that it receives dividend income from taxable domestic corporations and certain qualified foreign corporations, provided that certain holding periods and other requirements are met. A corporate shareholder of a Fund may be eligible for the dividends received deduction with respect to such Fund’s distributions attributable to dividends received by such Fund from domestic corporations, which, if received directly by the corporate shareholder, would qualify for such a deduction. For eligible corporate shareholders, the dividends received deduction may be subject to certain reductions, and a distribution by a Fund attributable to dividends of a domestic corporation will be eligible for the deduction only if certain holding period and other requirements are met. If a Fund’s shares are loaned pursuant to a securities lending agreement, dividends paid while the shares are held by the borrower may not be qualified dividend income and may not qualify for the dividends received deduction.

Under current law, a 3.8% Medicare contribution tax applies to net investment income including interest, (excluding, tax-exempt interest), dividends, and capital gains of U.S. individuals with income exceeding \$200,000 (\$250,000 if married and filing jointly) and of estates and trusts.

Each Fund will furnish a statement to shareholders providing the federal income tax status of its dividends and distributions including the portion of such dividends, if any, that qualifies as long-term capital gain.

Different tax treatment, including penalties on certain excess contributions and deferrals, certain pre-retirement and post-retirement distributions, and certain prohibited transactions, is accorded to accounts maintained as qualified retirement plans. **Shareholders are urged and advised to consult their own tax advisors for more information.**

PURCHASES OF FUND SHARES. Prior to purchasing shares in a Fund, the impact of dividends or distributions which are expected to be or have been declared, but not paid, should be carefully considered. Any dividend or distribution declared shortly after a purchase of shares of a Fund prior to the record date will have the effect of reducing the per share net asset value by the per share amount of the dividend or distribution, and to the extent the distribution consists of the Fund’s taxable income, the purchasing shareholder will be taxed on the taxable portion of the dividend or distribution received even though some or all of the amount distributed is effectively a return of capital. This is called “buying a dividend.” To avoid “buying a dividend,” check a Fund’s distribution dates before you invest.

SALES, EXCHANGES OR REDEMPTIONS. Upon the disposition of shares of a Fund (whether by redemption, sale or exchange), a shareholder may realize a capital gain or loss. Such capital gain or loss will be long-term or short-term depending upon the shareholder’s holding period for the shares. The capital gain will be long-term if the shares were held for more than 12 months and short-term if held for 12 months or less. If a shareholder sells or exchanges shares of a Fund within 90 days of having acquired such shares and if, before January 31 of the calendar year following the calendar year of the sale or exchange, as a result of having initially acquired those shares, the shareholder subsequently pays a reduced sales charge on a new purchase of shares of the Fund or another Fund, the sales charge previously incurred in acquiring the Fund’s shares generally shall not be taken into account (to the extent the previous sales charges do not exceed the reduction in sales charges on the new purchase) for the purpose of determining the amount of gain or loss on the disposition, but generally will be treated as having been incurred in the new purchase. Any loss realized on a disposition will be disallowed under the “wash sale” rules to the extent that the shares disposed of by the shareholder are replaced by the shareholder within a period of 61 days beginning 30 days before and ending 30 days after the date of disposition. In such a case, the basis of the shares acquired will be adjusted to reflect the disallowed loss. Any loss realized by a shareholder on a disposition of shares held by the shareholder for six months or less will be treated as a long-term capital loss to the extent of any distributions of capital gain dividends received by the shareholder and disallowed to the extent of any distributions of tax-exempt interest dividends received by the shareholder with respect to such shares. Capital losses are generally deductible only against capital gains except that individuals may deduct up to \$3,000 of capital losses against ordinary income.

The 3.8% Medicare contribution tax (applied as described above) will apply to gains from the sale or exchange of shares of a Fund.

BACKUP WITHHOLDING. Each Fund generally is required to withhold, and remit to the U.S. Treasury, subject to certain exemptions, an amount equal to 24% of all distributions and redemption proceeds paid or credited to a shareholder of such Fund if (i) the shareholder fails to furnish such Fund with the correct taxpayer identification number (“TIN”) certified under penalties of perjury, (ii) the shareholder fails to provide a certified statement that the shareholder is not subject to “backup withholding,” or (iii) the IRS or a broker has notified such Fund that the number furnished by the shareholder is incorrect or that the shareholder is subject to backup withholding as a result of failure to report interest or dividend income. If the backup withholding provisions are applicable, any such distributions or proceeds, whether taken in cash or reinvested in shares, will be reduced by the amounts required to be withheld. Backup withholding is not an additional tax. Any amounts withheld may be credited against a shareholder’s U.S. federal income tax liability.

STATE AND LOCAL TAXES. State and local laws often differ from federal income tax laws with respect to the treatment of specific items of income, gain, loss, deduction and credit.

Shareholders are urged and advised to consult their own tax advisors as to the state and local tax rules affecting investments in the Funds.

NON-U.S. SHAREHOLDERS. Distributions made to non-U.S. shareholders attributable to net investment income generally are subject to U.S. federal income tax withholding at a 30% rate (or such lower rate provided under an applicable income tax treaty). Notwithstanding the foregoing, if a distribution described above is effectively connected with the conduct of a trade or business carried on by a non-U.S. shareholder within the United States (or, if an income tax treaty applies, is attributable to a permanent establishment in the United States), federal income tax withholding and exemptions attributable to foreign persons will not apply. Instead, the distribution will be subject to withholding at the highest applicable U.S. tax rate (currently 37% in the case of individuals and 21% in the case of corporations) and the non-U.S. shareholders will be subject to the federal income tax reporting requirements generally applicable to U.S. persons described above.

Under U.S. federal tax law, a non-U.S. shareholder is not, in general, subject to federal income tax or withholding tax on capital gains (and is not allowed a deduction for losses) realized on the sale of shares of a Fund, or on capital gains dividends, provided that the Fund obtains a properly completed and signed certificate of foreign status, unless (i) such gains or distributions are effectively connected with the conduct of a trade or business carried on by the non-U.S. shareholder within the United States (or, if an income tax treaty applies, are attributable to a permanent establishment in the United States of the non-U.S. shareholder); (ii) in the case of an individual non-U.S. shareholder, the shareholder is present in the United States for a period or periods aggregating 183 days or more during the year of the sale and certain other conditions are met; or (iii) the shares of the Fund constitute U.S. real property interests (USRPIs), as described below.

Under current law, if a Fund is considered to be a “United States Real Property Holding Corporation” (as defined in the IRC and Treasury Regulations), then distributions attributable to certain underlying REIT investments and redemption proceeds paid to a non-U.S. shareholder that owns at least 5% of a Fund generally will cause the non-U.S. shareholder to treat such gain or distribution as income effectively connected with a trade or business in the United States, subject such gain or distribution to withholding tax, and cause the non-U.S. shareholder to be required to file a federal income tax return. In addition, in any year where at least 50% of the Fund’s assets are USRPIs (as defined in the IRC and Treasury Regulations), distributions of a Fund that are attributable to gains from the sale or exchange of shares in USRPIs may be subject to U.S. withholding tax (regardless of such shareholder’s percentage interest in such Fund) and may require the non-U.S. shareholder to file a U.S. federal income tax return in order to receive a refund (if any) of the withheld amount.

Subject to the additional rules described herein, federal income tax withholding will apply to distributions attributable to dividends and other investment income distributed by the Funds. The federal income tax withholding rate may be reduced (and, in some cases, eliminated) under an applicable tax treaty between the United States and the non-U.S. shareholder's country of residence or incorporation. In order to qualify for treaty benefits, a non-U.S. shareholder must comply with applicable certification requirements relating to its foreign status (generally by providing a Fund with a properly completed Form W-8BEN). **All non-U.S. shareholders are urged and advised to consult their own tax advisers as to the tax consequences of an investment in the Funds.**

Pursuant to the Foreign Account Tax Compliance Act ("FATCA"), a 30% withholding tax generally is imposed on payments of interest and dividends to (i) foreign financial institutions including non-U.S. investment funds and (ii) certain other foreign entities, unless the foreign financial institution or foreign entity provides the withholding agent with documentation sufficient to show that it is compliant with FATCA (generally by providing the Fund with a properly completed Form W-8BEN or Form W-8BEN-E, as applicable). If the payment is subject to the 30% withholding tax under FATCA, a non-U.S. shareholder will not be subject to the 30% withholding tax described above on the same income. Starting in 2019, payments of the gross proceeds (including distributions designated as capital gain dividends to the extent the payment is attributable to property that produces U.S. source interest or dividends) may also be subject to FATCA withholding absent proof of FATCA compliance prior to January 1, 2019. Shareholders are urged and advised to consult their own tax advisers regarding the application of this new reporting and withholding regime to their own tax situation.

Shareholders are urged and advised to consult their own tax advisers as to the tax consequences of an investment in a Fund.

FOREIGN BANK AND FINANCIAL ACCOUNTS AND FOREIGN FINANCIAL ASSETS REPORTING REQUIREMENTS. A shareholder that owns directly or indirectly more than 50% by vote or value of a Fund, is urged and advised to consult its own tax adviser regarding its filing obligations with respect to IRS Form FinCEN 114, Report of Foreign Bank and Financial Accounts.

Also, under recently enacted rules, subject to exceptions, individuals (and, to the extent provided in forthcoming future U.S. Treasury regulations, certain domestic entities) must report annually their interests in "specified foreign financial assets" on their U.S. federal income tax returns. It is currently unclear whether and under what circumstances shareholders would be required to report their indirect interests in a Fund's "specified foreign financial assets" (if any) under these new rules.

Shareholders may be subject to substantial penalties for failure to comply with these reporting requirements. **Shareholders are urged and advised to consult their own tax advisers to determine whether these reporting requirements are applicable to them.**

TAX-EXEMPT SHAREHOLDERS. A tax-exempt shareholder could realize UBTI by virtue of its investment in a Fund as a result of such Fund's investments and if shares in the Fund constitute debt financed property in the hands of the tax-exempt shareholder within the meaning of IRC Section 514(b).

It is possible that a tax-exempt shareholder of a Fund will also recognize UBTI if such Fund recognizes "excess inclusion income" (as described above) derived from direct or indirect investments in REMIC residual interests or TMPs. Furthermore, any investment in a residual interest of a CMO that has elected to be treated as a REMIC can create complex tax consequences, especially if a Fund has state or local governments or other tax-exempt organizations as shareholders.

In addition, special tax consequences apply to charitable remainder trusts ("CRTs") that invest in RICs that invest directly or indirectly in residual interests in REMICs or in TMPs.

Tax-exempt shareholders are urged and advised to consult their own tax advisors as to the tax consequences of an investment in a Fund.

TAX SHELTER REPORTING REGULATIONS. Under Treasury regulations, if a shareholder recognizes a loss of \$2 million or more for an individual shareholder or \$10 million or more for a corporate shareholder, the shareholder must file with the IRS a disclosure statement on Form 8886. The fact that a loss is reportable under these regulations does not affect the legal determination of whether the taxpayer's treatment of the loss is proper.

Shareholders are urged and advised to consult their own tax advisors to determine the applicability of these regulations in light of their individual circumstances.

TAX BASIS INFORMATION. For shares of the Fund that are redeemed, your financial intermediary or the Fund (if a shareholder holds the shares in the Fund direct account) will report gains and losses realized on redemptions of shares for shareholders who are individuals and S corporations purchased after January 1, 2012 to the Internal Revenue Service (IRS). This information will also be reported to a shareholder on Form 1099-B and the IRS each year. In calculating the gain or loss on redemptions of shares, the average cost method will be used to determine the cost basis of the Fund's shares purchased after January 1, 2012 unless the shareholder instructs the Fund in writing that the shareholder wants to use another available method for cost basis reporting (for example, First In, First Out (FIFO), Last In, First Out (LIFO), Specific Lot Identification (SLID) or High Cost, First Out (HIFO)). If the shareholder designated SLID as the shareholder's tax cost basis method, the shareholder will also need to designate a secondary cost basis method (Secondary Method). If a Secondary Method is not provided, the Fund will designate FIFO as the Secondary Method and will use the Secondary Method with respect to systematic withdrawals that are made.

A shareholder's financial intermediary or the Fund (if a shareholder holds the shares in the Fund direct account) is also required to report gains and losses to the IRS in connection with redemptions of shares by S corporations purchased after January 1, 2012. If a shareholder is a corporation and has not instructed the Fund that it is a C corporation in its Account Application or by written instruction, the Fund will treat the shareholder as an S corporation and file a Form 1099-B.

Shareholders are urged and advised to consult their own tax advisor with respect to the tax consequences of an investment in a Fund including, but not limited to, the applicability of state, local, foreign and other tax laws affecting the particular shareholder and to possible effects of changes in federal or other tax laws.

This summary is provided for general information only and should not be considered tax advice or relied on by an investor.

FINANCIAL STATEMENTS

The audited financial statements of the Emerging Markets Fund and the Emerging Markets Debt Fund and notes thereto in the Funds' Annual Report to Shareholders for the fiscal year ended April 30, 2018 (the "Annual Report") are incorporated by reference into this SAI. The 2018 financial statements included in the Annual Report have been audited by PricewaterhouseCoopers, LLP, an independent registered public accounting firm whose report thereon is also incorporated herein by reference. No other parts of the Annual Report are incorporated by reference herein. Copies of the Annual Report may be obtained without charge, upon request, by writing to the Fund at 4400 Computer Drive, Westborough, MA 01581-1722 or calling the Fund at (888) 447-0014.

APPENDIX A

DESCRIPTION OF SECURITIES RATINGS

Moody's Investors Service, Inc. ("Moody's"), Standard & Poor's® ("S&P") and Fitch Ratings, Inc. ("Fitch") are private services that provide ratings of the credit quality of debt obligations. A description of the ratings assigned by Moody's, S&P® and Fitch are provided below. These ratings represent the opinions of these rating services as to the quality of the securities that they undertake to rate. It should be emphasized, however, that ratings are general and are not absolute standards of quality. An adviser attempts to discern variations in credit rankings of the rating services and to anticipate changes in credit ranking. However, subsequent to purchase by a fund, an issue of securities may cease to be rated or its rating may be reduced below the minimum rating required for purchase by the fund. In that event, an adviser will consider whether it is in the best interest of a fund to continue to hold the securities.

Moody's credit ratings are current opinions of the relative future credit risk of entities, credit commitments, or debt or debt-like securities. Moody's defines credit risk as the risk that an entity may not meet its contractual, financial obligations as they come due and any estimated financial loss in the event of default. Credit ratings do not address any other risk, including but not limited to: liquidity risk, market value risk, or price volatility. Credit ratings are not statements of current or historical fact. Credit ratings do not constitute or provide investment or financial advice, and credit ratings are not and do not provide recommendations to purchase, sell, or hold particular securities. Credit ratings do not comment on the suitability of an investment for any particular investor. Moody's issues its credit ratings with the expectation and understanding that each investor will, with due care, make its own study and evaluation of each security that is under consideration for purchase, holding, or sale.

An S&P issue credit rating is a forward-looking opinion about the creditworthiness of an obligor with respect to a specific financial obligation, a specific class of financial obligations, or a specific financial program (including ratings on medium-term note programs and commercial paper programs). It takes into consideration the creditworthiness of guarantors, insurers, or other forms of credit enhancement on the obligation and takes into account the currency in which the obligation is denominated. The opinion reflects S&P's view of the obligor's capacity and willingness to meet its financial commitments as they come due, and may assess terms, such as collateral security and subordination, which could affect ultimate payment in the event of default.

Fitch credit ratings relating to issuers provide an opinion on the relative ability of an entity to meet financial commitments, such as interest, preferred dividends, repayment of principal, insurance claims or counterparty obligations. Credit ratings relating to securities and obligations of an issuer can include a recovery expectation. Fitch credit ratings are used by investors as indications of the likelihood of receiving their money owed to them in accordance with the terms on which they invested. Fitch's credit ratings cover the global spectrum of corporate, sovereign, financial, bank, insurance, and public finance entities (including supranational and sub-national) and the securities or other obligations they issue, as well as structured finance securities backed by receivables or other financial assets.

Short-Term Credit Ratings

Moody's

Ratings assigned on Moody's global short-term rating scales are forward-looking opinions of the relative credit risks of financial obligations issued by non-financial corporates, financial institutions, structured finance vehicles, project finance vehicles, and public sector entities. Short-term ratings are assigned to obligations with an original maturity of thirteen months or less and reflect the likelihood of a default on contractually promised payments and the expected financial loss suffered in the event of a default.

Moody's employs the following designations to indicate the relative repayment ability of rated issuers:

"P-1" - Issuers (or supporting institutions) rated Prime-1 have a superior ability to repay short-term debt obligations.

"P-2" - Issuers (or supporting institutions) rated Prime-2 have a strong ability to repay short-term debt obligations.

“P-3” - Issuers (or supporting institutions) rated Prime-3 have an acceptable ability to repay short-term obligations.

“NP” - Issuers (or supporting institutions) rated Not Prime do not fall within any of the Prime rating categories.

S&P

S&P’s short-term ratings are generally assigned to those obligations considered short-term in the relevant market. In the U.S., for example, that means obligations with an original maturity of no more than 365 days—including commercial paper. Short-term ratings are also used to indicate the creditworthiness of an obligor with respect to put features on long-term obligations. Medium-term notes are assigned long-term ratings.

Dual ratings may be assigned to debt issues that have a put option or demand feature, in which the short-term rating addresses the put feature, in addition to the usual long-term rating.

The following summarizes the rating categories used by S&P for short-term issues:

“A-1” - Obligations are rated in the highest category and indicate that the obligor’s capacity to meet its financial commitment on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor’s capacity to meet its financial commitment on these obligations is extremely strong.

“A-2” - Obligations are somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor’s capacity to meet its financial commitment on the obligation is satisfactory.

“A-3” - Obligations exhibit adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

“B” - Obligations are regarded as vulnerable and having significant speculative characteristics. The obligor currently has the capacity to meet its financial commitments; however, it faces major ongoing uncertainties which could lead to the obligor’s inadequate capacity to meet its financial commitments.

“C” - Obligations are currently vulnerable to nonpayment and are dependent upon favorable business, financial and economic conditions for the obligor to meet its financial commitment on the obligation.

“D” - Obligations are in default or in breach of an imputed promise. For non-hybrid capital instruments, the “D” rating category is used when payments on an obligation are not made on the date, unless S&P believes that such payments will be made within any stated grace period. However, any stated grace period longer than five business days will be treated as five business days. The “D” rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action and where default on an obligation is a virtual certainty, for example due to automatic stay provisions. An obligation is lowered to “D” if it is subject to a distressed exchange offer.

Local Currency and Foreign Currency Risks - Standard & Poor’s issuer credit ratings make a distinction between foreign currency ratings and local currency ratings. An issuer’s foreign currency rating will differ from its local currency rating when the obligor has a different capacity to meet its obligations denominated in its local currency, vs. obligations denominated in a foreign currency.

Fitch

A short-term issuer or obligation rating is based in all cases on the short-term vulnerability to default of the rated entity and relates to the capacity to meet financial obligations in accordance with the documentation governing the relevant obligation. Short-term deposit ratings may be adjusted for loss severity. Short-Term Ratings are assigned to obligations whose initial maturity is viewed as “short term” based on market convention. Typically, this means up to 13 months for corporate, sovereign and structured obligations, and up to 36 months for obligations in U.S. public finance markets.

The following summarizes the rating categories used by Fitch for short-term obligations:

“F1” — Highest short-term credit quality. This designation indicates the strongest intrinsic capacity for timely payment of financial commitments; may have an added “+” to denote any exceptionally strong credit feature.

“F2” — Good short-term credit quality. This designation indicates good intrinsic capacity for timely payment of financial commitments.

“F3” — Fair short-term credit quality. This designation indicates that the intrinsic capacity for timely payment of financial commitments is adequate.

“B” — Speculative short-term credit quality. This designation indicates minimal capacity for timely payment of financial commitments, plus heightened vulnerability to near term adverse changes in financial and economic conditions.

“C” — High short-term default risk. This designation indicates that default is a real possibility.

“RD” — Restricted default. This designation indicates an entity that has defaulted on one or more of its financial commitments, although it continues to meet other financial obligations. Typically applicable to entity ratings only.

“D” — Default. This designation indicates a broad-based default event for an entity, or the default of a short-term obligation.

Long-Term Credit Ratings

Moody's

Ratings assigned on Moody's global long-term rating scales are forward-looking opinions of the relative credit risks of financial obligations issued by non-financial corporates, financial institutions, structured finance vehicles, project finance vehicles, and public sector entities. Long-term ratings are assigned to issuers or obligations with an original maturity of one year or more and reflect both on the likelihood of a default on contractually promised payments and the expected financial loss suffered in the event of default. The following summarizes the ratings used by Moody's for long-term debt:

“Aaa” - Obligations rated “Aaa” are judged to be of the highest quality, subject to the lowest level of credit risk.

“Aa” - Obligations rated “Aa” are judged to be of high quality and are subject to very low credit risk.

“A” - Obligations rated “A” are judged to be upper-medium grade and are subject to low credit risk.

“Baa” - Obligations rated “Baa” are judged to be medium-grade and subject to moderate credit risk and as such may possess certain speculative characteristics.

“Ba” - Obligations rated “Ba” are judged to be speculative and are subject to substantial credit risk.

“B” - Obligations rated “B” are considered speculative and are subject to high credit risk.

“Caa” - Obligations rated “Caa” are judged to be speculative of poor standing and are subject to very high credit risk.

“Ca” - Obligations rated “Ca” are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

“C” - Obligations rated “C” are the lowest rated and are typically in default, with little prospect for recovery of principal or interest.

Note: Moody's appends numerical modifiers 1, 2, and 3 to each generic rating classification from "Aa" through "Caa." The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category. Additionally, a ("hyb") indicator is appended to all ratings of hybrid securities issued by banks, insurers, finance companies, and securities firms.

S&P

Issue credit ratings are based, in varying degrees, on S&P's analysis of the following considerations:

- Likelihood of payment—capacity and willingness of the obligor to meet its financial commitment on an obligation in accordance with the terms of the obligation;
- Nature of and provisions of the obligation, and the promise S&P imputes.
- Protection afforded by, and relative position of, the obligation in the event of bankruptcy, reorganization, or other arrangement under the laws of bankruptcy and other laws affecting creditors' rights.

Issue ratings are an assessment of default risk, but may incorporate an assessment of relative seniority or ultimate recovery in the event of default. Junior obligations are typically rated lower than senior obligations, to reflect the lower priority in bankruptcy, as noted above. (Such differentiation may apply when an entity has both senior and subordinated obligations, secured and unsecured obligations, or operating company and holding company obligations.)

The following summarizes the ratings used by S&P for long-term issues:

"AAA" - An obligation rated "AAA" has the highest rating assigned by S&P. The obligor's capacity to meet its financial commitment on the obligation is extremely strong.

"AA" - An obligation rated "AA" differs from the highest-rated obligations only to a small degree. The obligor's capacity to meet its financial commitment on the obligation is very strong.

"A" - An obligation rated "A" is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor's capacity to meet its financial commitment on the obligation is still strong.

"BBB" - An obligation rated "BBB" exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

Obligations rated "BB," "B," "CCC," "CC," and "C" are regarded as having significant speculative characteristics. "BB" indicates the least degree of speculation and "C" the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

"BB" - An obligation rated "BB" is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial or economic conditions which could lead to the obligor's inadequate capacity to meet its financial commitment on the obligation.

"B" - An obligation rated "B" is more vulnerable to nonpayment than obligations rated "BB," but the obligor currently has the capacity to meet its financial commitment on the obligation. Adverse business, financial or economic conditions will likely impair the obligor's capacity or willingness to meet its financial commitment on the obligation.

"CCC" - An obligation rated "CCC" is currently vulnerable to nonpayment, and is dependent upon favorable business, financial and economic conditions for the obligor to meet its financial commitment on the obligation. In the event of adverse business, financial, or economic conditions, the obligor is not likely to have the capacity to meet its financial commitment on the obligation.

“CC” - An obligation rated “CC” is currently highly vulnerable to nonpayment. The “CC” rating is used when a default has not yet occurred, but S&P expects default to be a virtual certainty, regardless of the anticipated time to default.

“C” — An obligation rated “C” is currently highly vulnerable to nonpayment, and the obligation is expected to have lower relative seniority or lower ultimate recovery compared to obligations that are higher rated.

“D” - An obligation rated “D” is in default or in breach of an imputed promise. For non-hybrid capital instruments, the “D” rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within five business days in the absence of a stated grace period or within the earlier of the stated grace period or 30 calendar days. The “D” rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action and where default on an obligation is a virtual certainty, for example due to automatic stay provisions. An obligation’s rating is lowered to ‘D’ if it is subject to a distressed exchange offer.

“NR” - This indicates that no rating has been requested, or that there is insufficient information on which to base a rating, or that S&P does not rate a particular obligation as a matter of policy.

Plus (+) or minus (-) - The ratings from “AA” to “CCC” may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.

“*Local Currency and Foreign Currency Risks*” - Standard & Poor’s issuer credit ratings make a distinction between foreign currency ratings and local currency ratings. An issuer’s foreign currency rating will differ from its local currency rating when the obligor has a different capacity to meet its obligations denominated in its local currency, vs. obligations denominated in a foreign currency.

Fitch

Rated entities in a number of sectors, including financial and non-financial corporations, sovereigns and insurance companies and certain sectors within public finance, are generally assigned Issuer Default Ratings (IDRs). IDRs are also assigned to certain entities in global infrastructure and project finance. IDRs opine on an entity’s relative vulnerability to default on financial obligations. The “threshold” default risk addressed by the IDR is generally that of the financial obligations whose non-payment would best reflect the uncured failure of that entity. As such, IDRs also address relative vulnerability to bankruptcy, administrative receivership or similar concepts, although the agency recognizes that issuers may also make pre-emptive and therefore voluntary use of such mechanisms.

In aggregate, IDRs provide an ordinal ranking of issuers based on the agency’s view of their relative vulnerability to default, rather than a prediction of a specific percentage likelihood of default. For historical information on the default experience of Fitch-rated issuers, please consult the transition and default performance studies available from the Fitch Ratings website.

The following summarizes long-term IDR categories used by Fitch:

“AAA” — Highest credit quality. “AAA” ratings denote the lowest expectation of default risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

“AA” — Very high credit quality. “AA” ratings denote expectations of very low default risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

“A” — High credit quality. “A” ratings denote expectations of low default risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

“BBB” — Good credit quality. “BBB” ratings indicate that expectations of default risk are currently low. The capacity for payment of financial commitments is considered adequate, but adverse business or economic conditions are more likely to impair this capacity.

“BB” — Speculative. “BB” ratings indicate an elevated vulnerability to default risk, particularly in the event of adverse changes in business or economic conditions over time; however, business or financial flexibility exists which supports the servicing of financial commitments.

“B” — Highly speculative. “B” ratings indicate that material default risk is present, but a limited margin of safety remains. Financial commitments are currently being met; however, capacity for continued payment is vulnerable to deterioration in the business and economic environment.

“CCC” — Substantial credit risk. “CCC” ratings indicate that default is a real possibility.

“CC” — Very high levels of credit risk. “CC” ratings indicate default of some kind appears probable.

“C” — Near Default. “C” ratings indicate default or default like process has begun, or the issuer is in standstill, or for a closed funding vehicle, payment capacity is irrevocably impaired. Conditions that are indicative of a ‘C’ category rating for an issuer include:

- a. the issuer has entered into a grace or cure period following non-payment of a material financial obligation;
- b. the issuer has entered into a temporary negotiated waiver or standstill agreement following a payment default on a material financial obligation; or
- c. the formal announcement by the issuer or their agent of a distressed debt exchange; or
- d. a closed financing vehicle where payment capacity is irrevocably impaired such that it is not expected to pay interest and/or principal in full during the life of the transaction, but where no payment default is imminent.

“RD” - Restricted default. “RD” ratings indicate an issuer that in Fitch Rating’s opinion has experienced: a. an uncured payment default on a bond, loan or other material financial obligation but b. has not entered into bankruptcy filings, administration, receivership, liquidation or other formal winding-up procedure, and c. has not otherwise ceased business. This would include:

- a. the selective payment default on a specific class or currency of debt;
- b. the uncured expiry of any applicable grace period, cure period or default forbearance period following a payment default on a bank loan, capital markets security or other material financial obligation;
- c. the extension of multiple waivers or forbearance periods upon a payment default on one or more material financial obligations, either in series or in parallel; ordinary execution of a distressed debt exchange on one or more material financial obligations.

“D” — Default. “D” ratings indicate an issuer that in Fitch Ratings’ opinion has entered into bankruptcy filings, administration, receivership, liquidation or other formal winding-up procedure, or that has otherwise ceased business.

Default ratings are not assigned prospectively to entities or their obligations; within this context, non-payment on an instrument that contains a deferral feature or grace period will generally not be considered a default until after the expiration of the deferral or grace period, unless a default is otherwise driven by bankruptcy or other similar circumstance, or by a distressed debt exchange.

In all cases, the assignment of a default rating reflects the agency's opinion as to the most appropriate rating category consistent with the rest of its universe of ratings, and may differ from the definition of default under the terms of an issuer's financial obligations or local commercial practice.

Note: The modifiers "+" or "-" may be appended to a rating to denote relative status within major rating categories. Such suffixes are not added to the "AAA" category, or generally to categories below "B."

Specific limitations relevant to the issuer credit rating scale include:

- The ratings do not predict a specific percentage of default likelihood or failure likelihood over any given time period.
- The ratings do not opine on the market value of any issuer's securities or stock, or the likelihood that this value may change.
- The ratings do not opine on the liquidity of the issuer's securities or stock.
- The ratings do not opine on the possible loss severity on an obligation should an issuer default, except in the following cases:
 - Ratings assigned to individual obligations of issuers in corporate finance, banks, non-bank financial institutions, insurance or covered bonds.
 - In limited circumstances for U.S. public finance obligations where Chapter 9 of the Bankruptcy Code provides reliably superior prospects for ultimate recovery to local government obligations that benefit from a statutory lien on revenues or during the pendency of a bankruptcy proceeding under the Code if there is sufficient visibility on potential recovery prospects.
- The ratings do not opine on the suitability of an issuer as a counterparty to trade credit.
- The ratings do not opine on any quality related to an issuer's business, operational or financial profile other than the agency's opinion on its relative vulnerability to default.

Ratings assigned by Fitch Ratings articulate an opinion on discrete and specific areas of risk. The above list is not exhaustive.

Municipal Note Ratings

Moody's

Moody's uses three rating categories for short-term municipal obligations (U.S. municipal bond anticipation notes of up to three years maturity) that are considered investment grade. These ratings are designated as Municipal Investment Grade ("MIG") and are divided into three levels - "MIG 1" through "MIG 3". In addition, those short-term obligations that are of speculative quality are designated "SG", or speculative grade. MIG ratings expire at the maturity of the obligation.

The following summarizes the ratings used by Moody's for these short-term obligations:

"MIG 1" - This designation denotes superior credit quality. Excellent protection is afforded by established cash flows, highly reliable liquidity support, or demonstrated broad-based access to the market for refinancing.

"MIG 2" - This designation denotes strong credit quality. Margins of protection are ample, although not as large as in the preceding group.

"MIG 3" - This designation denotes acceptable credit quality. Liquidity and cash-flow protection may be narrow, and market access for refinancing is likely to be less well-established.

"SG" - This designation denotes speculative-grade credit quality. Debt instruments in this category may lack sufficient margins of protection.

In the case of variable rate demand obligations ("VRDOs"), a two-component rating is assigned: a long or short-term debt rating and a demand obligation rating. The first element represents Moody's evaluation of risk associated with scheduled principal and interest payments. The second element represents Moody's evaluation of risk associated with the ability to receive purchase price upon demand ("demand feature"). The second element uses a rating from a variation of the MIG scale called the Variable Municipal Investment Grade or "VMIG" scale.

"VMIG 1" - This designation denotes superior credit quality. Excellent protection is afforded by the superior short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

"VMIG 2" - This designation denotes strong credit quality. Good protection is afforded by the strong short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

"VMIG 3" - This designation denotes acceptable credit quality. Adequate protection is afforded by the satisfactory short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

"SG" - This designation denotes speculative-grade credit quality. Demand features rated in this category may be supported by a liquidity provider that does not have an investment grade short-term rating or may lack the structural and/or legal protections necessary to ensure the timely payment of purchase price upon demand.

S&P

An S&P U.S. municipal note rating reflects S&P's opinion about the liquidity factors and market access risks unique to notes. Notes due in three years or less will likely receive a note rating. Notes with an original maturity of more than three years will most likely receive a long-term debt rating. In determining which type of rating, if any, to assign, S&P's analysis will review the following considerations:

- Amortization schedule—the larger the final maturity relative to other maturities, the more likely it will be treated as a note; and
- Source of payment—the more dependent the issue is on the market for its refinancing, the more likely it will be treated as a note.

Note rating symbols are as follows:

"SP-1" - The issuers of these municipal notes exhibit a strong capacity to pay principal and interest. An issue determined to possess a very strong capacity to pay debt service is given a plus (+) designation.

"SP-2" - The issuers of these municipal notes exhibit a satisfactory capacity to pay principal and interest, with some vulnerability to adverse financial and economic changes over the term of the notes.

“SP-3” - The issuers of these municipal notes exhibit speculative capacity to pay principal and interest.
Fitch

Fitch uses the same ratings for municipal securities as described above for other short-term credit ratings.

APPENDIX B

DuPont Capital — Updated Proxy Voting Policy - 3.30.16

Voting Options Available to DuPont Capital's Clients. With regard to equity securities managed on its behalf by DuPont Capital, a client may (1) reserve the right to vote its own proxies, (2) direct DuPont Capital to vote proxies in accordance with the client's voting policy, in which case DuPont Capital will work with ISS to implement a custom policy in accordance with the client's wishes, or (3) grant discretion to DuPont Capital regarding proxy voting decisions.

Where DuPont Capital has discretion on proxy voting decisions, it votes in a manner it determines is in the best interest of (1) the plan participants where DuPont Capital is managing ERISA or similar benefit plan assets or (2) the client for all other assets. This is achieved through a custom voting policy that DuPont Capital has established with ISS. In the vast majority of cases, DuPont Capital's custom policy is identical to ISS's "Benchmark Voting Policy." There are a few scenarios, however, where DuPont Capital votes with management rather than with ISS's Benchmark policy, *e.g.*, separation of Chairman and CEO, cumulative voting, rotation of audit firms, and Director and Officer liability protection (except when willful misconduct is indemnified or there is pending litigation against directors), social and environmental issues, cash balance plans, linking compensation to non-financial factors, and, in certain cases as described below, ownership thresholds required to call special meetings. The following outlines DuPont Capital's reasons for deviating from the ISS Benchmark Policy:

Separation of Chairman and CEO— DuPont Capital believes that the board of directors is in the best position to make this decision. Many well-run companies are led by a Chairman/CEO.

Cumulative voting - Cumulative voting violates the principle of one person-one vote and favors minority special interest groups.

Rotation of audit firms - It is expensive and time consuming to rotate audit firms.

Director and Officer liability protection - Broader indemnification is useful in attracting and retaining qualified directors.

Social and environment issues - Proposals of shareholders generally carry a cost in dollars and resources. The management of the company is in the best position to determine appropriate allocation of resources.

Cash balance plans— DuPont Capital believes that management's position on these issues is consistent with maximizing shareholder value.

Linking compensation to non-financial factors - The appropriateness of linking non-financial factors and compensation is best left to the discretion of compensation committees.

Ownership thresholds for calling special meetings - DuPont Capital's view is that a 25% ownership threshold appropriately balances the rights of shareholders against the expense, disruption, and time requirements associated with holding special shareholder meetings. Accordingly, DuPont Capital will vote FOR (a) proposals that establish rights to call special meetings when such proposals specify an ownership level of 25% or more and (b) proposals that reduce requirements for calling special meetings from an ownership level above 25% to a level of no less than 25%. DuPont Capital will vote AGAINST any proposal to establish or reduce these thresholds below 25%. The standard ISS voting policy votes FOR these proposals without regard to the ownership level specified in the proposal.

In some cases, DuPont Capital may decide that special circumstances warrant an override to DuPont Capital's custom policy. Please refer to the Conflicts of Interest section for more information on this process.

Detailed and summary versions of ISS's voting policies are available at www.issgovernance.com.

Clients' Rights to Information. Each DuPont Capital client is entitled to a copy of DuPont Capital's proxy voting guidelines and to information on how DuPont Capital has voted proxies for shares held in its account(s). This information can be requested through each client's relationship manager. DuPont Capital's proxy voting administrator obtains the requested information from ISS's website or from the representative at ISS that services DuPont Capital's account and provides a response to the client through DuPont Capital's Marketing and Client Services groups.

Records Maintained. DuPont Capital is responsible for maintaining various proxy voting records required under Books and Records Rule 204-2 as summarized below:

Responsibility List for Proxy Voting Records under Rule 204-2

Description of Record	PV Administrator	PM	CCO	Mktg
Copies of all policies and procedures required by Rule 206 (4)-6.			X	
A copy of any document created by a DuPont Capital employee that was material to making a decision on how to vote proxies on behalf of a client; or a memorandum that documents the basis for that decision (Referrals & Overrides)	X (PM instructions and approvals)	X (Details)		
A copy of each written client request for information about proxy voting on behalf of the client; and a copy of any written response by DuPont Capital to any client request (written or oral) on how that client's proxies were voted.				X
A copy of each proxy statement received by DuPont Capital regarding client securities. The Rules allow DuPont Capital to meet this requirement by relying on ISS (a third party) to make and maintain on our behalf the copies of proxy statements.	X (Via ISS)			
A record of each vote cast by DuPont Capital on behalf of a client. DuPont Capital again relies ISS to make and retain a record of all votes cast. The ISS website allows DuPont Capital to promptly retrieve the voting records.	X (Via ISS)			
Copies of client contracts with DuPont Capital.				X

As permitted under SEC Rules, DuPont Capital relies on ISS to provide proxy statements and voting records on DuPont Capital's behalf. ISS makes these records available to DuPont Capital promptly upon request.

Conflicts of Interest. DuPont Capital employees within Business Services periodically review ISS's website (which contains a comprehensive due diligence package) and SOC 1 report for evidence of satisfactory segregation between its proxy voting business and its consulting business. In addition to its practices of transparency and disclosure, ISS maintains a "firewall" separating the staff that performs proxy analyses from the members of its Corporate Services business. This firewall includes legal, physical and technological separations. The two groups are separately managed and the compensation of ISS' proxy analysts is not directly tied to any activities of the Corporate Services business.

At times, proxy voting options that are in the best interests of DuPont Capital's client may not be in the best interest of DuPont Capital. This conflict is addressed by DuPont Capital in the following ways:

- DuPont Capital relies on ISS's independent research and voting recommendations in the vast majority of proxy voting decisions. ISS is an industry leader that specializes in voting proxies in the best interests of plan participants and advisory clients.

- In the cases where DuPont Capital’s custom policy varies from the ISS Benchmark policy, DuPont Capital has documented its reasoning and obtained the approval of its CCO for each case where such differences exist. Some examples are highlighted in the [Voting Options Available to DuPont Capital’s Clients](#) section above.
- While the DuPont Capital custom policy’s recommended voting position is generally accepted by DuPont Capital, there may be matters that have a potentially significant impact on the company (*e.g.*, mergers) where a DuPont Capital analyst or portfolio manager believes that overriding the recommended vote is in the best interest of plan participants or clients. An equity analyst, equity portfolio manager, or DuPont Capital’s CCO must provide a written, objective rationale explaining why an override is in the best interests of plan participants or clients. Two equity portfolio managers and/or senior DuPont Capital officers must sign the override recommendation.
- Disclosure to clients, upon request, of proxy voting decisions provides transparency and an incentive for DuPont Capital to fulfill its obligation to put the interests of its clients before its own interests.

Oversight. While DuPont Capital has outsourced the proxy voting activity, it retains an important responsibility to monitor and oversee the services it receives from ISS. In addition to obtaining various policies and procedures from ISS, and its annual SOC 1 report, DuPont Capital’s proxy voting administrator monitors voting activity through reporting tools provided on ISS’s website. Reporting capabilities include identification of “meetings not voted,” “votes against policy,” and meetings where action may be required by DuPont Capital in order to vote proxies. These reports are run at least monthly and any items requiring follow-up are addressed with DuPont Capital’s account manager at ISS. If an error occurs, DuPont Capital works with ISS personnel to ensure that controls are put in place to prevent a recurrence.

DuPont Capital’s proxy voting administrator serves as a liaison between portfolio managers and ISS on voting matters that are voted on a “case-by-case” basis, and maintains records of decisions on such votes. Portfolio managers are responsible for handling overrides as described in the “Conflict of Interest” section above, and for providing written voting instructions on case-by-case proxy issues.

DuPont Capital’s Fiduciary Committee has a role in reviewing and approving DuPont Capital’s proxy voting policy and changes thereto. DuPont Capital’s Investment Committee periodically reviews DuPont Capital’s custom voting policy and adopts changes thereto. The two committees work together as appropriate to ensure that the custom voting policy and the narrative description in DuPont Capital’s Compliance Guide are consistent.
